

PREFACE

Pakistan Social and Living Standards Measurement Survey (PSLM), 2004-05 is the first round of a series of surveys planned to be conducted upto 2009. The survey following Core Welfare Indicators Questionnaire (CWIQ) approach was conducted with the aim to provide data for use by the government in formulating the poverty reduction strategy as well as development plans at district level and rapid assessment of programmes initiated under Poverty Reduction Strategy Paper and Medium Term Development Framework (MTDF) in the overall context of MDG.

The first report containing National/ Provincial level indicators was released in June 2005. This report is the second in the series containing detailed district level results. Federal Bureau of Statistics in the past always carried out surveys containing National / Provincial level results. However, this is first attempt that district level indicators have been developed from a sample survey covering approximately 76,520 households in the sectors such as Education, Health, Water Supply & Sanitation and Household Economic Situation & Satisfaction by facilities and services use. This report provides information on the key social indicators at national, as well as at provincial/ district levels with urban/ rural breakdown in comparison with the information of the last two rounds of PIHS, where ever possible, with the current round of PSLM in order to assess the trends of the key indicators.

The report contains five chapters. These are: Introduction, Education, Health, Housing, Water Supply & Sanitation, Household Perception of Economic Situation and Satisfaction by Facilities and Services Use. Mr.Khalid Mahmud Project Director and his team of PSLM Project has finalized this report.

Comments and suggestions for improving future issues of this report will be most welcome.

February, 2006

EXECUTIVE SUMMARY

This report containing district level findings is in continuation of the report on the National/Provincial findings of the first round of the Pakistan Social and Living Standards Measurement (PSLM) Survey 2004-05. In this survey, 76520 households were covered in the entire country and information was collected from households on a range of social sector issues. These are primarily focussed on the sectors covered under Poverty Reduction Strategy Paper (PRSP) i.e. Education, Health, Household Assets/Amenities, Immunisation, Pre/Post Natal care of females and Household satisfaction by facilities and services.

Indicators between different groups are presented disaggregated by province/district, by region (urban-rural) and by gender. Since this is the first time that district level survey has been carried at the same time in the entire country therefore district level indicators could not be compared with any previous figure. However, National / Provincial level indicators given in the reports have been compared with the previous reports of PIHS, wherever possible. Thus the report can be used to assess finding primarily at district level for the year:

Education

The Gross Enrolment Rate (GER) for primary schools (Age 5-9) has increased from 72% in 2001-02 to 86% in 2004-05. Narowal district in the Punjab, Karachi in Sindh, Abbotabad in N.W.F.P and Ketch in Balochistan with GRE; 130%, 111%, 117%, and 110% respectively have been ranked as top districts within the provinces. The Net Enrolment Rate (NER) was 42 percent in 2001-02, substantially lower than the Gross Enrolment Rate because of the enrolment of overage children in primary school, however, it has also increased significantly between 2001-02 to 2004-05 i.e. from 42 to 52%. Sialkot (84%) in the Punjab, Karachi (85%) in Sindh, Abbotabad (70%) in N.W.F.P, and Ketch (63%) in Balochistan have been ranked on the top in each province. The PSLM collects information on enrolment in all types of schools i.e. public, private and also deeni madaris. The PSLM round shows decrease in the share of primary enrolments that are in government schools. The overall share has declined from 74% in 2001-02 to 72% in 2004-05. However, some of the poorest district such as Bhakkar (Punjab), Tharparkar (Sindh), Upper Dir (N.W.F.P) and Jhal Magsi (Balochistan) have shown almost 100% government enrolment.

The GER (Age 10-12) at National level for middle level has increased from 41 to 46 per cent where as the NER has risen moderately i.e. from 16 to 18%. Chakwal (81%) in the Punjab, Karachi (67%) in Sindh, Chitral (77%) in N.W.F.P and Ketch (62%) in Balochistan are ranked top within the province for Middle class GER. However, NER which gives more realistic picture shows that Sialkot (30%) in the Punjab, Karachi (27%) in Sindh, Abbotabad (29%) in N.W.F.P and Quetta (17%) in Balochistan are at the top within the provinces.

The increase in Matric Level (Age 13-14) GER (42 to 44%) and NER (9 to 11%) is moderate but the real impact will be observable after four/five years when the existing

primary level Cohort will reach at Matric Level. The districts of Rawalpindi (80%), Karachi (79%), Chitral (83%) and Quetta (65%) in the Punjab, Sindh, N.W.F.P and Balochistan respectively are at the top within the provinces for Matric GER. As far as NER is concerned, Lahore (19%) in the Punjab, Karachi (20%) in Sindh, Abbotabad (18%) in N.W.F.P and Panjgur (16%) are the top districts.

The comparison of different GERs and NERs has been carried out using official age group brackets at Primary, Middle and Matric Levels which according to analysts are not realistic. Keeping in view this tables for GERs and NERs have also been worked out using different age brackets recommended by the Technical Committee formed by the government to review PIHS/ HIES. NER with the revised age brackets show improvements over the official age groups.

The literacy level of population (10 years & above) has shown improvement. This has risen from 45 percent in PIHS 2001-02 to 53 percent in the PSLM 2004-05. This increase has taken place in both for men and women and across all provinces. Adult literacy (15 years & above) has also been worked out for the first time and it has increased from 43% in PIHS 2001-02 to 50% in PSLM 2004-05. Rawalpindi (75%) in the Punjab, Karachi (78%) in Sindh, Abbotabad (65%) in N.W.F.P and Quetta (65%) in Balochistan are top districts within the provinces for literate persons over age 10 years and above. Karachi district is at the top in Literacy in Pakistan.

Health

The PSLM report includes sickness/injuries, immunisation, diarrhoea and the use of pre and post-natal services. The sickness / injuries within last two weeks show the prevalence rate of 7.10% and in 93.38% cases these people visited health consultants. Prevalence of sickness / injuries is lower in most of the districts in the Punjab compared to other provinces. Bahawalpur (Punjab), Lakki Marwat (N.W.F.P), and Jhal Magsi (Balochistan) districts with little over 12% have the highest prevalence rates among all the districts.

Two measures of immunisation coverage are presented. Based on mother's recall, at least one immunisation has increased from 74% to 83%. The measure that includes mothers' recall as well as record of immunisations given to the child shows a rise from 53% to 77% in the proportion of one year old who are fully immunised. Jhelum 99% , Hyderabad 88%, Chitral 100%, and Gwadar 97% are top ranked districts in the Punjab, Sindh, N.W.F.P, and Balochistan provinces respectively.

There has been an increase in the proportion of children under five suffering from diarrhoea i.e. from 14 to 16% but Sindh has shown significant increase from 11 % to 18%. The increase is particularly notable for Sindh (Rural) i.e. from 9% to 19% which may be attributed to shortage of clean water availability in many districts in the recent past. Bahawalpur 28% in the Punjab province, Larkana 30% in Sindh, D.I Khan 29% in NWFP and Gwadar 34% in Balochistan province are the most affected districts within each province.

About half of mothers had a pre-natal consultation compared to 35% in 2001-2002 during their last pregnancy. Prenatal consultations were much more common in urban than in rural areas but there is also considerable improvement. Attock & Sialkot 80% , Karachi 81%, Abbotabad 71% and Gwadar 72% are at the top ranks within the provinces. There is decreasing trend both in urban and rural area to consult Govt Hospitals/BHUs/RHCs and which is significant i.e. from 42 to 25%. The frequency of post-natal consultations of 23% in 2004-05 was comparatively lower than the frequency of pre-natal check-ups.

Fifty one percent of pregnant women received Tetanus Toxoid injection in 2004-05 compared to 46 percent in 2001-02. Sialkot (87%) in the Punjab, Karachi (72%) in Sindh, Peshawar (63%) in N.W.F.P and Panjgur (50%) in Balochistan are at top ranks within the provinces.

Housing, Water Supply & Sanitation

The housing units by tenure reveal that 86.6% of households have their own house and 7% live on rented accommodation. In Islamabad (Federal Capital) lowest number of households i.e. 58.8% live in their own houses, whereas 37% live in the rented or subsidised rented units. In PSLM 2004-05 the comparison of housing units by number of rooms with the 1998 census data indicate that housing units with one room have declined from 38.1 to 24.2%, 2-4 rooms increased from 55 to 68.7% and more than five rooms increased marginally from 6.9 to 7.1%. The housing units having electricity (as sources of lighting) have increased from 70.5 to 83.9% Sialkot is at the top with 99.29% households having electricity connections. Use of Gas (as cooking fuel) has increased from 20.2 to 29.5%. Karachi followed by Lahore are the top two districts in the country with 89.18% and 77.85% gas connections respectively.

There has been improvement in Tap Water supplies from 25% to 39% between 2001-02 and 2004-05. The large differences between the provinces in drinking water supplies are observed, with Balochistan and N.W.F.P depending most on the poorest sources. Water sources from Motor Pump have particularly been declined in Balochistan and also in N.W.F.P due to which water from poorest sources has increased from 20 to 25% in rural areas. Lahore 80% in the Punjab, Karachi 86% in Sindh, Bannu 77% in N.W.F.P and Quetta 82% in the Balochistan are the top districts within province which have piped water facility.

Access to flush toilets remains low in rural areas, although there is evidence to suggest that it has improved from 26 to 30% between 2001-02 and 2004-05. Improvements appear to be concentrated in Punjab and N.W.F.P. Households with no toilet in rural areas have declined significantly from 59 to 40 %. The top ranked districts within the province having Flush toilet facility are Lahore 94%, Karachi 91% , Peshawar 73% , and Quetta 76%

Household Perception of Economic Situation and Satisfaction by Facilities and Services

Households were asked to compare their economic situation with last year. In response to this question 51.5% reported no change, 23.9 reported worse or much worse and 24.2 reported better or much better. The pattern in districts in the provinces is more or less the same as observed at National / Provincial levels. However, when asked to compare the economic situation of the community where they live, 59% reported the same, 9.6 reported worse or much worse and 25.2% reported better or much better.

Households were also asked to give opinion about their satisfaction of the Facilities / Services provided by the government. In response to this question, 36% reported satisfaction on Govt Basic Health Facilities, 10.5% satisfied with the Family Planning Services, 60% with Schools, 11.8% with Veterinary Services (pre dominantly rural), 11% with Agriculture Extension (all rural) and 6.5% with Police. Most of the districts in Punjab and Sindh are generally less satisfied with the services/ facilities provided by the government compared to N.W.F.P and Balochistan.

1. Introduction

1.1 The PSLM

The Pakistan Social and Living Standards Measurement Survey is one of the main mechanisms for monitoring the implementation of the PRSP. It provides a set of district level representative, population-based estimates of social indicators and their progress under the PRSP. These include intermediate as well as ‘output’ measures, which assess what is being provided by the social sectors – enrolment rates in education, for example. They include a range of ‘outcome’ measures, which assess the welfare of the population – Immunisation Rate, for example.

An important objective of the PSLM Survey is to try to establish what the distributional impact of PRSP has been. Policymakers need to know, for example, whether the poor have benefited from the programme or whether increased government expenditure on the social sectors has been captured by the better off

In the remainder of this introduction, a description of the 2004-05 PSLM Survey is provided. In the following chapters, data relating education, health, household assets / amenities, immunisation, pre and postnatal care and satisfaction of services is given.

1.2 SAMPLE DESIGN OF PSLM SURVEY 2004-2005 (DISTRICT LEVEL)

Universe: The universe of this survey consists of all urban and rural areas of the four provinces and Islamabad excluding military restricted areas.

Sampling Frame: FBS has developed its own urban area frame, which was up-dated in 2003. Each city / town has been divided into enumeration blocks consisting of 200-250 households identifiable through sketch map. Each enumeration block has been classified into three categories of income groups i.e. low, middle and high keeping in view the living standard of the majority of the people. List of villages published by Population Census Organization obtained as a consequence of Population Census 1998 has been taken as rural frame.

Stratification Plan:

A. Urban Domain: Islamabad, Lahore, Gujranwala, Faisalabad, Rawalpindi, Multan, Bahawalpur, Sargodha, Sialkot, Karachi, Hyderabad, Sukkur Peshawar and Quetta, have been considered as large sized cities. Each of these cities constitutes a separate stratum and has further been sub-stratified according to low, middle and high-income groups. After excluding population of large sized city (s), the remaining urban population in each district in all the provinces has been grouped together to form a stratum.

B. Rural Domain: Each district in the four provinces of Pakistan has been treated an independent stratum.

Sample Size and Its Allocation: Keeping in view the objectives of the survey the sample size for the four provinces has been fixed at 74420 households comprising 5204 sample village/ enumeration blocks, which is expected to produce reliable results at each district. However, the total sample size including AJK, NA and FATA is 76520 households.

Sample Design: A two-stage stratified sample design has been adopted in this survey.

Selection of Primary Sampling Units (PSUs): Villages and enumeration blocks in urban and rural areas respectively have been taken as Primary Sampling Units (PSUs). Sample PSUs have been selected from strata/sub-strata with PPS method of sampling technique.

Selection of Secondary Sampling Units (SSUs): Households within sample PSUs have been taken as Secondary Sampling Units (SSUs). A specified number of households i.e 16 and 12 from each sample PSU of rural & urban area have been selected respectively using systematic sampling technique with a random start. Detailed sampling plan is attached as Appendix- A

1.3 Objectives and scope of analysis

This is the second analytical report containing district level indicators of the PSLM Survey. It provides an overview of the findings in all sectors at district levels. Given that the PSLM is a large, complex household survey that collects information on a number of different topics, the tabulations presented here comprise the detailed tables at National/ Provincial/ District levels in continuation of the first National / Provincial level report which has already been released

1.4 Data Quality and Reliability Measures

Data quality in PSLM Survey has been ensured through built in system of checking of fieldwork by the supervisors in the field as well as teams from the headquarters. Regional/ Field offices ensured the data quality through preliminary editing at their office level. The entire data entry was carried at the FBS headquarter Islamabad and the data entry programme used had a number of in built consistency checks. Reliability measures in terms of Confidence Intervals are given at Appendix-B.

2. EDUCATION

2.1 Introduction

No doubt literacy and primary school enrolment rates in Pakistan are low compared with the countries of the region. But there are strong indicators that these are improving over the passage of time due to Government policies through different programmes such as SAP, PRSP etc by extending universal primary education and improving the quality of education. Education commands a large share of the overall PRSP budget. The PRSP strategy for the sector includes, improving the functioning, utilisation of existing school, improving the quality of education, increase enrolment, improving access to education and expanding the primary education system.

This chapter will cover key indicators on school attendance, enrolment rates and literacy at district levels

2.2 School attendance

The population of ten years and older which is 55% in 2004-05 compared to 51% in 2001-02. This proportion is much higher in urban areas than in rural areas and much higher in men than in women. Punjab and Sindh have the highest proportions that have ever attended school. Islamabad being geographical as part of the Punjab has been included in the Punjab indicate that 85% of the population age ten & over has ever attended the school followed by Rawalpindi at 77% , Muzaffargarh & Rajanpur districts at 40% are at the lowest. In Sindh Karachi with 78% is at the top and Jaccobabad with 34% is at the bottom. In case of N.W.F.P , Abbotabad with 67% and upper Dir with 34% are at the top and bottom respectively. In Balochistan , Quetta district with 64% is at the top however Jhal Magsi with 20% is lowest in the Balochistan as well as in the entire country.

44% of the proportion of the population 10 years and over that has completed primary level or higher has been observed in 2004-05, (Table 2.2). Similarly the districts which have highest and lowest “Ever School Attendance” also follow the same pattern of completed primary level or higher education.

2.3 Primary Enrolment rates

The GER, sometimes referred to as the participation rate, is the number of children attending primary school divided by the number of children who ought to be attending. The GERs are presented in this report in two different ways: excluding and including the katchi class and for different age groups.

Table 2.3(a) shows the gross primary level enrolment rates at National/ Provincial/ District levels excluding katchi for the age group 5-9 years and Table 2.3 (b) for age 6-10 years. The GER at National level during 2004-2005 is 86 percent. Provinces of Punjab & Sindh have shown noticeable increase in 2004-05, Table 2.3(b)-GER

primary level has been added by changing age group from 5-9 to 6-10 for reader's information. In the Punjab, Narowal district primary GRE (Age 5-9) is 130% is at the top whereas district Muzaffargarh with 66% is at the bottom. In Sindh Karachi with 111% and Jacobabad with 43% are at the top and bottom respectively. In N.W.F.P, Abbottabad district is at the top with 117% and Kohistan district with 52% is at the bottom. In Balochistan Ketch district (110%) and Jafarabad district (33%) are at the top and bottom respectively. Jafarabad district has the lowest GRE in the entire country.

The gross enrolment rate at National Level is 82% when katchi is also included and the age group is expanded to 4-9 year olds (Table 2.4). The pattern within districts in the provinces is more or less similar to GREs when Katchi class is excluded .

The PSLM 2004-05 collects information on enrolment in all types of school including the private and government sectors. Table 2.5 shows the gross enrolment rate in government primary schools. It is calculated as the number of children enrolled in government primary schools divided by the number of children of primary school age. One of the main strategies of the Government of Pakistan is to expand public provision of primary education and this measure can be used to assess whether government schools have increased their coverage of the population, by increasing enrolments faster than the growth in population. In the Punjab province , Attock district with 96% enrolment in government schools is at the top whereas Lahore with 37% is at the bottom. In Sindh Nowshero Feroze 74% and Jacobabad 41% are at the top and lowest in the ranks. Mansehra with 88% and Shangla with 42% in N.W.F.P are at the highest and lowest ranks respectively. In Balochistan Ketch 108% and Nasirabad 32% are at the top and bottom respectively.

The NER at primary level refers to the number of students enrolled in primary school of primary school age divided by the number of children in the age group for that level of education. In other words, for Pakistan, the official primary NER is the number of children aged 5 to 9 years attending primary level divided by the number of children aged 5 to 9 years.

The NER for Pakistan as a whole in 2004-05, is 52 per cent (Table 2.6 a). NER for primary level has been added by changing age group from 5-9 to 6-10 for reader's information. Comparing NERs for districts within the provinces, it is revealed that in the Punjab Province Sialkot 84% and Bahawalpur 38% are at the top and bottom respectively. In case of Sindh Karachi with 65% is at the top and Jacobabad with 25% is at the lowest . For N.W.F.P, Abbottabad 70% and Kohistan 24% are at the highest and lowest levels respectively. In Balochistan, district Ketch 63% and Qilla Abdullah 19% are the top and bottom respectively. Sialkot in the Punjab is the best performing district and Qila Abdullah (Balochistan) is the worst for overall Primary NER. Generally girls have a lower enrolment rate than boys and the difference is markedly larger in rural areas than in urban areas.

Table 2.8 shows the NER for government primary schools. This is the number of children aged 5-9 years enrolled in government primary schools divided by the total

number of children aged 5-9. Like the gross enrolment rate for government schools, it measures the extent to which publicly provided education is reaching its target group. However, this measure excludes overage children who are enrolled in primary school. The NER for Government primary school within districts in the provinces follow similar pattern as observed for NERs for the entire primary enrolment.

The percentage of primary school students who are enrolled in government schools is shown in Table 2.9 (a). The government share of primary enrolment is 72 per cent in 2004-05. The district wise comparison among districts within the provinces revealed that in the Punjab provinces, districts of Bhakkar 97% and Lahore 34% are at the top and bottom respectively . In Sindh, Tharparkar with 97% and Karachi with 40% govt primary enrolment are at the highest and lowest ranks respectively. In N.W.F.P districts of Upper Dir 95% and Peshawar 64% are at the top and bottom respectively. In Balochistan with the exception of Quetta (76%) all remaining districts are over 90%. The above analysis reflects that developed districts have larger share of private education whereas less developed districts mostly depend on government educational facilities.

2.4 Middle and Matric Enrolment Rates

Gross and net enrolment rates for the middle level with age group 10-12 years old are presented in Tables 2.10(a) and 2.11(a). The gross enrolment rate for the middle level, for Pakistan as a whole, is 46 percent. The middle level enrolment in urban areas, stands at 64 percent compared to 38 percent in that of rural areas. Islamabad (Federal Capital) with 97% GER for middle class is at the top. However, district Chakwal 81% is next to Islamabad district in the Punjab and Muzaffargarh with 28% is at the bottom. In Sindh , Karachi with 67% and Thatta with 17% are at the top and bottom respectively. In N.W.F.P Chitral with 77% is at the top and Kohistan with 18% is at the lowest rank. In Balochistan Ketch/ (62%) and Kharan (11%) are the highest and lowest ranks respectively. Tables 2.10(b) and 2.11(b) have been added for GER & NER respectively for middle level by changing age group from 10-12 to 11-13 for reader's information.

Net enrolment rates at the middle level are much lower than gross enrolment rates (Table 2.11A). This is due to the large number of overage children that are enrolled in these classes. The district level comparison within the provinces depict that more or less NERs have the same patterns which are observed for GREs. Islamabad with 36% is at top in all districts.

At matric level, gross enrolment stands at 44 per cent and net enrolment rate at 11 per cent (Tables 2.12 a and 2.13a). The GRE for matric level for Rawalpindi (80%) and Lodhran (23%) are at the top and bottom respectively in the Punjab province. In sindh province Karachi with 79% and Thatta with 20% are the highest and lowest ranks respectively. The districts of Chitral 83% and Kohistan & Bonair 18% in N.W.F.P are at the top and bottom of ranks respectively. In Balochistan Quetta 65% is at the top and Kharan 13% is at the bottom. More or less same pattern is observed for NERs among districts within provinces. Tables 2.12(b) and 2.13(b) have been added for GER & NER respectively for matric level by changing age group from 13-14 to 14-15 for reader's information.

2.5 Literacy

Literacy is an important indicator of education because its improvement is likely to have an impact, in the longer run, on other important indicators of welfare. The literacy rate for population 10 years and above is 53 percent during 2004-05, (Table 2.14 a). Literacy remains much higher in urban areas than rural areas and much higher in men than women. Islamabad (Federal Capital) with 84% followed by Rawalpindi district with 75% in the Punjab province is at the top whereas Lodhran district with 34% is at the lowest. In Sindh, Karachi 78% and Jaccobabad 34% are at the highest and lowest of ranks respectively. Abbotabad with 65% and Kohistan with 25% are ranked top and bottom districts in N.W.F.P. In Balochistan province, Quetta 65% and Jhal Magsi 20% are at the highest and lowest of the ranks respectively. Adult literacy rate for the population aged 15 and above is 50% and has been incorporated first time for users information. The patterns among districts within the provinces are similar to the Literacy Rate of population 10 years and above.

3. HEALTH

3.1 Introduction

The Government health strategy focuses on young children and their mothers, particularly in rural areas. One of the most pressing needs addressed by Government is to improve women's access to government health care. The Government's strategy for primary health includes:

- improving the efficiency and utilisation of basic health care services, both preventive and curative;
- improving programme design by paying more attention to quality;
- increasing access to health care by constructing more facilities;
- increasing women's access by recruiting more female staff; and,

In this chapter, information is presented on a number of key indicators which include percentage of population who get sick or injured, type of health consultation, immunisation; diarrhoea; pre-and post-natal care.

3.2 Sick or injured

7.1% of the population reported sick or injured during the reference period of two weeks prior to the date of interview. Sindh and NWFP with 8.11% and 8.79% respectively have comparatively higher prevalence of sick or injured population compared to Punjab and Balochistan. Prevalance of sickness / injuries is lower in most of the districts in the Punjab compared to other provinces, Bahawalpur with 12.12% prevalence is at the top. Bahawalpur (Punjab), Lakki Marwat (N.W.F.P), and Jhal Magsi (Balochistan) districts with little over 12% have the highest prevalence rates among all the districts. Almost 93% of reported as sick or injured had some type of health consultation. Over 67% of sick or injured persons consulted private hospitals or doctors compared to 22.8% who visited public hospitals/ dispensaries/ RHCs /BHUs for their treatment (Table 3.3). The pattern of health consultation in districts for public and private hospitals / dispensaries is the same which has been observed at National/ Provincial level.

3.3 Immunisation

Expanding the coverage of immunisation in Pakistan is a primary objective of Government. Measuring immunisation coverage in household surveys is not easy. Parents often do not have the children's immunisation / health cards with full information on vaccinations received. Immunisation rates based only on the information given on immunisation cards ('record') may therefore underestimate coverage. However, it has

the benefit of using written information recorded by health workers.¹ The alternative is to ask parents about their child's vaccination history, and calculate coverage rates using this information ('recall'). This runs the risk that parents will not remember vaccinations will confuse different types of vaccine or will confuse other injections with vaccination. Neither measure is ideal; both are presented in this report to help make an informed judgment on trends. In this report, both of these measures use all children of the appropriate age range in the denominator.

According to the WHO guidelines, a child should receive a BCG vaccination to protect against tuberculosis, three doses of DPT to protect against diphtheria, pertussis, and tetanus, three doses of polio vaccine, and a measles vaccination. Table 3.4 presents immunisation rates for children aged 12-23 months, who have been immunised during the period 12 to 24 months prior to the survey. At least one immunisation based on recall is 83 per cent overall as compared to 74 percent for PIHS 2001-02. The values reported for at least one immunisations for PIHS 2001-02 have been recalculated for comparison as PIHS also includes vaccination of Polio by campaign where as PSLM includes only routine vaccination that completes in nine months. Overall, when recall and record measures are included, full immunisation rates (all the 8 recommended vaccines) showed a positive increase from 53 per cent in 2001-02 to 77 per cent in 2004-05.² . For fully immunised based on recall and record Jhelum with 99%, Hyderabad 88%, Chitral 100%, and Gwadar 97% are top ranked districts in the Punjab, Sindh, N.W.F.P, and Balochistan provinces respectively.

Using the measure that includes recall, there is an increase in full immunisation rates for both urban and rural areas, but in rural areas it is particularly impressive going from 46 per cent in PIHS 2001-02 to 72 per cent in PSLM 2004-05. When considering the record based measure immunisation rates improved in urban areas as well as rural areas. Considerable improvement is shown in rural Sindh from 6 per cent in PIHS 2001-02 to 32 per cent in PSLM 2004-05 where as NWFP has shown a slight decline for record based measurements for full immunisation (46 per cent in PIHS 2001-02 to 42 per cent in PSLM 2004-05). By and large, all provinces have shown significant improvement in measures that includes recall and also in record.

Coverage by antigen is given in Tables 3.5 and 3.6. The former is based on record, the latter on record plus recall. Both measures have shown general improvement in the coverage of all antigens as compared with 2001-02.

¹ Note that even the record-based measure cannot be based exclusively on vaccinations recorded on the health card, since it is not possible to identify the source of the information on each antigen. Instead, it is calculated for all children who had a health card, using all immunisations reported, whether or not these were recorded on the card. It is likely that most will have been recorded on the card.

² Full immunisation means that the child has received: BCG, DPT1, DPT2, DPT3, Polio1, Polio2, Polio3 and measles.

3.4 Diarrhoea

Dehydration caused by diarrhoea is a major cause of mortality among children. Childhood diarrhoea has been a serious health problem in Pakistan. Both its prevention, through improved water and sanitation, and the treatment of dehydration through oral rehydration salts (ORS) are goals of government. Home management of diarrhoea through oral rehydration salts (ORS) or a recommended home fluid (RHF) - can prevent many of these deaths. Preventing dehydration by increasing fluid intake is important strategy for managing diarrhoea.

It was asked to report whether a child had diarrhoea in the 30 days prior to the survey. If so, a series of questions were asked whether they have consulted someone for it or not and about whether ORS has been given to child or not.

Overall the percentage of children who have suffered from diarrhoea in the 30 days increased from 14 per cent in PIHS 2001-02 to 16 per cent in PSLM 2004-05. By province Punjab and Sindh have shown increase in diarrhoea cases while NWFP and Balochistan have shown decrease. Bahawalpur 28% in the Punjab province, Larkana 30% in Sindh, D.I Khan 29% in NWFP and Gwadar 34% in Balochistan province are the most affected districts within each province. (Table 3.7).

In 91 per cent of diarrhoea cases a practitioner of some kind was consulted. This represents an improvement as compared with 83 per cent in 2001-02 PIHS. The pattern of practitioner consultation in districts of Punjab(except Kasur 77%),Sindh (except Tharparker 77%) and N.W.F.P is the same. However, in Balochistan Province pattern is mix with the exception of Musa Khal district having 45% consultation rate (Table 3.8). The use of ORS in diarrhoea cases has increased to 78 per cent in 2004-05. ORS is most likely to be used in Sindh NWFP and Balochistan, whereas its use is lowest in Punjab. ORS is more or less equally used in NWFP urban and rural areas, except in rural Balochistan. The pattern within the districts is more or less the same, which has been observed at provincial levels.

In cases of diarrhoea, the most likely type of practitioner to be consulted continues to be a private practitioner 68 per cent in PSLM 2004-05 (Table 3.9) as observed in PIHS 2001-02. Government facilities shows decline as compared to PIHS 2001-02(20 to 15 per cent). Basic health units (BHU) and rural health centres (RHC) consulted only 5 per cent of cases in rural Pakistan, which gives some indication of the very limited use of the government primary health network for these kind of curative services. However , in Balochistan 52% diarrhea cases were consulted by government facilities and in most of the districts, government facilities such as hospitals, Dispenseries and BHUs were consulted.

3.5 Pre-and post-natal care

Quality prenatal care can contribute to the prevention of maternal mortality by detecting and managing potential complications and risk factors, including pre-eclampsia, anaemia, and sexually transmitted diseases. Pre-natal care also provides opportunities for women to learn the danger signs of pregnancy and delivery, to be immunised against tetanus, to learn about infant care, and be treated for existing conditions, such as malaria and anaemia.

Some 50 per cent of mothers who had given birth in the last three years went for pre-natal consultations during their last pregnancy (Table 3.10). The attendance rate was much higher in urban (66 per cent) than rural areas (40 per cent). Attendance rates have increased in urban as well as rural areas. In rural areas, Punjab has the highest attendance and Balochistan the lowest. Attock & Sialkot 80% , Karachi 81%, Abbotabad 71% and Gwadar 72% are at the top ranks within the provinces. In rural Pakistan, the three most commonly consulted sources were private hospital/clinic (34 per cent), government hospital/clinic (25 per cent) and Home TBA (16 per cent).

Tetanus toxoid injections are given to women during pregnancy to protect infants from neonatal tetanus, a major cause of infant death that is due to primarily unsanitary conditions during childbirth. In addition these injections protect women from developing tetanus themselves or suffering from sepsis. Two doses of tetanus toxoid during pregnancy offer full protection. However, if a woman was vaccinated during a previous pregnancy, she may only need a booster to give full protection. Five doses are thought to provide lifetime protection. Some 51 per cent of mothers had received a tetanus toxoid injection during their last pregnancy compared with 46 per cent in the 2001-02 PIHS Sialkot (87%) in the Punjab, Karachi (72%) in Sindh, Peshawar (63%) in N.W.F.P and Panjgur(50%) in Balochistan are at top ranks within the provinces. (Table 3.11).

The vast majority of births, some 71 per cent, takes place at home (Table 3.12). In rural areas, some 81 per cent were at home compared with 56 per cent in urban areas. The most commonly cited source of assistance in rural areas was a trained dai,& traditional birth attendant (53 per cent of cases), followed by family member/relative (26 per cent). Bhakhar (92%) in the Punjab, Tharparker (88%) in Sindh, Kohistan (99%) in N.W.F.P and Awaran (99%) in Balochistan are the highest ranked districts ,where child was delivered at home.

Post-natal consultation rates even though improved in 2004-05 were much lower than the pre-natal rates cited above (Table 3.13). 23 per cent of mothers received a post-natal check up within six weeks of delivery during their last pregnancy in 2004-05 compared to 9% in 2001-02. Urban areas had higher rates than rural areas, though both were low. Islamabad (50%) followed by Karachi (45%) are the top two districts for post natal consultations.

The three most commonly cited sources of post-natal care in rural areas were private hospital/clinic (39 per cent), government hospital/clinic (24 per cent), and traditional birth attendant at home (15 per cent).

4. Housing, Water supply & Sanitation

4.1 Introduction

Most of the households in rural Pakistan do not have access to adequate potable water. Many also lack toilets and adequate sanitation systems. The Government aims to expand access to clean drinking water and to improve sanitation particularly in rural areas. The main Government strategy in rural water supply is to improve the performance and operation of local water supply systems by promoting community responsibility for the management and maintenance of systems. To improve sanitation in rural areas, the government is promoting the construction of household latrines, the construction of open surface drains with street pavements and providing hygiene education.

In this chapter, information is presented on housing, electricity, gas, water supplies and toilets.

4.2 Housing:

Some 87 per cent of all households reported that they have own dwelling unit while 7% of households have rented dwelling unit and about 5.32% have rented free house but a small number of 1.1% households have on subsidized housing units. (Table 4.1). In Islamabad (Federal Capital) 37% household live in rented or subsidized rented units compared to 59% live in their own housing units. In all other districts in the country people predominantly live in their own housing units.

Table 4.2 shows percent distribution of household material used for “Roof”. In Pakistan about 50% housing units are constructed using Wood/ Bamboo (28.7% Urban and 66% Rural). Province- wise distribution is 44.4% - Punjab, 41% - Sindh, 59.7% - N.W.F.P and 79% - Balochistan. In Balochistan Province with the exception of Quetta district all the remaining districts use predominantly Wood/ Bamboo.

Similarly in Table 4.3 percent distribution is given of material used for the construction of “Walls”. Burnt Bricks/ Blocks have been used in 64% housing units (88% Urban and 46% Rural) . Here again in Balochistan province 18.65% units have reported the use of Burnt Bricks/ Blocks which is considerably low compared to other provinces. Except Quetta all remaining districts use Mud Bricks/ Mud and particularly in the rural areas this percentage is over 80.

4.3 Electricity & Gas:

Table 4.5 shows that 83.9% of households were using electricity as fuel for lighting and 15.5% of households use gas and oil as a fuel for lighting. 96.4% urban areas have electricity compared to 74.3% in rural areas. Sialkot is at the top with 99.29%

households having electricity connection. Muzaffargarh (65%) in the Punjab, Tharparker (21%) in Sindh, Kohistan (47%) in N.W.F.P and Musakhel / Awaran (9%) are the lowest districts in the provinces having electricity connections.

Table 4.6 indicates that 29.5% households are using gas as fuel. Only 4.9 per cent households in rural households are using gas compared to 61.6% in urban areas. Karachi followed by Lahore are the two top districts in the country with 89.18% and 77.85% gas connections respectively.

4.4 Sources of Drinking Water

The main source of drinking water in rural areas in Pakistan is the hand pump (Table 4.7). Hand pumps and motor pumps together contributed 70 per cent of households with drinking water in PIHS 2001-02 which decreased to 53 per cent in 2004-05. Motor pumps form an increasingly relevant part of this. In fact, the most significant change in rural drinking water supplies between 2001-02 and 2004-05 is the increasing percentage of households using tap water. However, this change appears to be mainly a change in convenience since there seems to be a substitution from hand pumps and motor pumps. Moreover, the percentage of households is depending on lower water sources i.e. dug well and other either remained unchanged or slightly increased. Overall Lahore 80% in the Punjab, Karachi 86% in Sindh, Bannu 77% in N.W.F.P and Quetta 82% in the Balochistan are the top districts within provinces having piped water facility.

NWFP has the best rural water supply amongst the provinces in terms of tap water. The vast majority of the rural population of Punjab has either hand pump or water from a motor pump¹ and only 4 per cent of the rural population depend on a dug well or other sources (river, canal or stream). Sindh-Rural has shown improvement in poor water supply sources in 2004-05 compared to 2001-02 i.e. from 25 to 20%.The rural water supply situation in NWFP is still worse, and is worst of all in Balochistan. In these two provinces, 44 and 69 per cent of the rural population, respectively, depend on water from a dug well or from a river/canal/stream. The wide variation in water sources between provinces suggests strong cases for interventions targeted, especially, at NWFP and Balochistan.

4.5 Toilets

In Pakistan as a whole, 26 per cent households do not have any toilet (Table 4.8). This varies greatly between urban and rural areas i.e. 6 per cent of urban households have no toilet compared to 40 per cent of rural households. Rural areas have much poorer sanitation provision than they do drinking water provision. However, there seems to have been significant improvement in rural sanitation, with a improvement in the proportion of households without a toilet from 59 to 40 % and an increase from 26 to 30 % in the proportion reporting a flush toilet. . Rural Punjab has the highest proportion of

¹ It is assumed that water from a hand pump is, generally, cleaner than from a dug well or river/canal/stream. However, it is important to note that water from a hand pump may sometimes be contaminated. Since no tests are carried out on water quality, the PSLM must depend on the type of water source used to provide an approximate indicator of quality.

households reporting no toilet at all, at 50 per cent. Rural Sindh has the lowest, at 27 per cent.

The use of flush toilets is 86 % for the urban households, Punjab with 91% is highest and Balochistan with 63% is the lowest. The top ranked districts within the province having Flush toilet facility are Lahore 94%, Karachi 91% , Peshawar 73% , and Quetta 76%. In the Punjab (rural) with the exception of Lahore (9%) all other districts having significant portion of rural population is still without any toilet facility. Similarly, in other provinces situation is not as worse as of Punjab but still majority of districts do not have toilet facility for rural population.

5. Household Perception of Economic Situation and Satisfaction by Facilities and Service Use.

5.1 Introduction

This type of information has been collected for the first time in FBS household surveys. Since government is spending lot to improve the economic situation of people and also investing considerable amount in providing different types of facilities/ services. Considering as how facilities/ services are being passed on to the general public, the respondents were asked to give their perception in their economic as well as community improvement and how effectively services/ facilities are available to them.

5.2 Perception of Economic Situation

Households were asked to compare their economic situation with last year. In response to this question 51.5% reported no change, 23.9 reported worse or much worse and 24.2 reported better or much better. The pattern in districts in the provinces is more or less the same as observed at National / Provincial levels. However, when asked to compare the economic situation of the community where they live, 59% reported the same, 9.6 reported worse or much worse and 25.2% reported better or much better.

5.3 Satisfaction by Facilities and Service Use

Households were also asked to give opinion about their satisfaction of the Facilities / Services provided by the government. In response to this question, 36% reported satisfaction on Govt Basic Health Facilities, 10.5% satisfied with the Family Planning Services, 60% with Schools, 11.8% with Veterinary Services (pre dominantly rural), 11% with Agriculture Extension (all rural) and 6.5% with Police. Most of the districts in Punjab and Sindh are generally less satisfied with the services/ facilities provided by the government compared to N.W.F.P and Balochistan.

APPENDIX A: SAMPLE DESIGN FOR PAKISTAN SOCIAL AND LIVING STANDARDS MEASUREMENT SURVEY DISTRICT LEVEL, 2004-05

Objectives:

The data generated through PSLM Survey will be used to assist the government in formulating the poverty reduction strategy as well as development plans at district level. The indicators will be developed at district level in the following sectors.

1. Education
2. Health
3. Water Supply & Sanitation.
4. Household Assets/Amenities.
5. Satisfaction to Service Delivery.

Universe:

The universe of this survey consists of all urban and rural areas of all four provinces, Azad Jammu and Kashmir and FATA. Military restricted and protected areas of NWFP have been excluded from the scope of the survey.

SAMPLING FRAME

Urban area:

FBS has developed its own urban area frame. All urban areas comprising cities/towns have been divided into small compact areas known as enumeration blocks (E.Bs) identifiable through map. Each enumeration block comprises about 200-250 households and categorized into low, middle and high-income group, keeping in view the socio economic status of the majority of households. Urban area sampling frame consists of 26698 enumeration blocks has been updated in 2003.

Rural area:

With regard to the rural areas, the lists of villages/mouzas/dehs according to Population Census, 1998 have been used as sampling frame. In this frame, each village/mouza/deh is identifiable by its Name, Had Bast Number, Cadastral map etc. This frame is comprised 50590 villages/mouzas

The number of enumeration blocks in urban and mouzas/dehs/villages in rural areas of the country are as under:

NO. OF ENUMERATION BLOCKS AND VILLAGES AS PER SAMPLING FRAME

Province	Number of E. Blocks	Number of Villages
Punjab	14,549	25,875
Sindh	9,025	5,871
NWFP	1,913	7,337
Balochistan	613	6,557
A.J.K	210	1,654
Northern Area	64	566
FATA		2,596
Islamabad	324	132
Total	26,698	50,588

STRATIFICATION PLAN**Urban Areas:**

Within each district large sized cities having population five lacs and above have been treated as independent stratum. Each of these cities has further been sub-stratified into low, middle and high groups areas. The remaining cities/towns within each district have been grouped together to constitute an independent stratum. The entire AJ & K and Northern Areas have been treated as separate stratum respectively.

Rural Areas:

The entire rural domain of a district for Punjab, Sindh, NWFP and Balochistan provinces has been considered as independent stratum. All rural areas within AJ & K and Northern Areas have been adopted as independent stratum respectively.

Sample Size and its Allocation:

To determine optimum sample size for this survey, analytical studies based on the results of Pakistan Demographic Survey, Labour Force and Pakistan Integrated Households Sample Survey were undertaken. Keeping in view the variability exist within the population for the characteristics for which estimates are to be prepared, population distribution, level of estimates and field resources available a sample size of 76520 households enumerated from 5348 sample PSUs (2262 from urban and 3086 from rural areas) has been considered sufficient to produce reliable estimates at district level in respect of all provinces. An Annexure-I showing sample sizes by districts in four provinces of Pakistan, AJ&K and Northern Areas is attached.

Sample Design: A two-stage stratified sample design has been adopted for this survey.

Selection of primary sampling Units (PSUs):

Enumeration blocks in the urban domain and mouzas/dehs/villages in rural domain have been taken as primary sampling units (PSUs). In urban domain sample PSUs from each stratum have been selected by probability proportional to size (PPS) method of sampling scheme using households in each block as measure of size (MOS). Similarly in rural areas, population of each village has taken as MOS for selection of sample villages using probability proportional to size method of selection.

Selection of Secondary Sampling Units (SSUs):

Households within each sample Primary Sampling Unit (PSU) have been considered as Secondary Sampling Units (SSUs). 16 and 12 households have been selected from each sample village and enumeration block respectively by systematic sampling scheme with a random start.

Estimation Procedures:

Detail of estimation procedures for estimates and their variances is attached as Annexure – II.

Estimation Procedure:

ESTIMATION PROCEDURE ADOPTED FOR PSLM SURVEY

NOTATIONS:

N_h = Total number of Primary Sampling Units (PSUs) in the h th stratum of a province.

n_h = Total number of sample PSUs in the h th stratum of a province.

M_{hi} = Total number of Secondary Sampling Units (SSUs) in the i th sample PSU of h th stratum of a province.

m_{hi} = Number of sample SSUs in the i th sample PSU of h th stratum of a province.

P_{hi} = Assigned probability of selection of i th PSU of the h th stratum of a province.

y_{hij} = Value of any characteristic y of j th SSU within i th PSU of h th stratum of a province.

x_{hij} = Value of any characteristic x of j th SSU within i th PSU of h th stratum of a province with whose respect proportion is required.

(i): ESTIMATION FORMULAE FOR TOTALS AND THEIR VARIANCES

$$N = \sum_{h=1}^L N_h$$

$$n = \sum_{h=1}^L n_h$$

$$\bar{Y}_h = \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{\bar{Y}_{hi}}{p_{hi}}$$

OR

$$\bar{Y}_h = \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{1}{p_{hi}} \frac{M_{hi}}{m_{hi}} \sum_{j=1}^{m_{hi}} y_{hij}$$

$$\bar{Y} = \sum_{h=1}^L \bar{Y}_h = \sum_{h=1}^L \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{\bar{Y}_{hi}}{p_{hi}}$$

For X , another variable of interest, we have

$$\bar{X}_h = \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{\bar{X}_{hi}}{P_{hi}} = \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{1}{P_{hi}} \frac{M_{hi}}{m_{hi}} \sum_{j=1}^{m_{hi}} x_{hij}$$

$$\bar{X} = \sum_{h=1}^L \bar{X}_h = \sum_{h=1}^L \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{\bar{X}_{hi}}{p_{hi}}$$

$$\bar{R} = \frac{\bar{Y}}{\bar{X}}$$

$$v(\bar{Y}_h) = \frac{1}{n_h} s_{ht}^2 = \frac{1}{n_h(n_h - 1)} \left(\sum_{i=1}^{n_h} \frac{\bar{Y}_{hi}^2}{P_{hi}^2} - \frac{(\sum_{i=1}^{n_h} \frac{\bar{Y}_{hi}}{P_{hi}})^2}{n_h} \right)$$

$$v(\bar{Y}) = \sum_{h=1}^L \frac{1}{n_h} s_{ht}^2 = \sum_{h=1}^L \frac{1}{n_h(n_h - 1)} \left(\sum_{i=1}^{n_h} \frac{\bar{Y}_{hi}^2}{P_{hi}^2} - \frac{(\sum_{i=1}^{n_h} \frac{\bar{Y}_{hi}}{P_{hi}})^2}{n_h} \right)$$

(ii): FORMULA FOR RATIO ESTIMATES

$$r = \frac{\bar{Y}}{\bar{X}}$$

where $\bar{Y}^{\wedge}$ and $\bar{X}^{\wedge}$ can be estimated by equations under item (i) given above.

$$Rel V(r) = \frac{1}{\bar{X}^2} \sum_{h=1}^L \frac{1}{n_h} s_{hb}^2 + \frac{1}{\bar{X}^2} \sum_{h=1}^L \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{M_{hi}^2}{p_{hi}^2 m_{hi}} \frac{(M_{hi} - m_{hi})}{M_{hi}} s_{hw}^2$$

where

$$s_{hb}^2 = s_{ht}^2 - s_{hw}^2$$

$$s_{ht}^2 = s_{hy}^2 + r^2 s_{hx}^2 - 2r s_{hxy}$$

$$s^2_{hx} = \frac{1}{(n_h - 1)} \left[\sum_{i=1}^{n_h} \frac{\bar{x}_{hi}^2}{p_{hi}^2} - \frac{\left(\sum_{i=1}^{n_h} \frac{\bar{x}_{hi}}{p_{hi}} \right)^2}{n_h} \right]$$

$$s^2_{hy} = \frac{1}{(n_h - 1)} \left[\sum_{i=1}^{n_h} \frac{\bar{y}_{hi}^2}{p_{hi}^2} - \frac{\left(\sum_{i=1}^{n_h} \frac{\bar{y}_{hi}}{p_{hi}} \right)^2}{n_h} \right]$$

$$s_{hxy} = \frac{1}{n_h - 1} \left[\sum_{i=1}^{n_h} \left(\frac{\bar{x}_{hi}}{p_{hi}} \frac{\bar{y}_{hi}}{p_{hi}} \right) - \frac{\left(\sum_{i=1}^{n_h} \frac{\bar{x}_{hi}}{p_{hi}} \right) \left(\sum_{i=1}^{n_h} \frac{\bar{y}_{hi}}{p_{hi}} \right)}{n_h} \right]$$

$$s^2_{hw} = \frac{1}{n_h - 1} \sum_{i=1}^{n_h} \frac{1}{p_{hi}^2} \frac{M_{hi}^2}{m_{hi}} \frac{(M_{hi} - m_{hi})}{M_{hi}} s^2_{hi}$$

and

$$s^2_{hi} = s^2_{hiy} + r^2 s^2_{hix} - 2r s_{hixy}$$

$$s^2_{hiy} = \frac{1}{(m_{hi} - 1)} \left[\sum_{j=1}^{m_{hi}} y^2_{hij} - \frac{\left(\sum_{j=1}^{m_{hi}} y_{hij} \right)^2}{m_{hi}} \right]$$

$$s^2_{hix} = \frac{1}{(m_{hi} - 1)} \left[\sum_{j=1}^{m_{hi}} x^2_{hij} - \frac{\left(\sum_{j=1}^{m_{hi}} x_{hij} \right)^2}{m_{hi}} \right]$$

$$s^2_{hixy} = \frac{1}{(m_{hi} - 1)} \left[\sum_{j=1}^{m_{hi}} x_{hij} y_{hij} - \frac{\left(\sum_{j=1}^{m_{hi}} x_{hij} \sum_{j=1}^{m_{hi}} y_{hij} \right)}{m_{hi}} \right]$$

NOTES:

1. Gross enrolment rate: [Number of children attending primary level (classes 1-5) divided by number of children aged 5 - 9 years] multiplied by 100. Enrolment in katchi is excluded.
2. Numerator of GER: Raised sum of all individuals who report currently attending primary level.
3. Denominator of GER: Raised sum of all individuals aged 5 - 9 years who respond to the relevant questions.

NOTES:

1. Net enrolment rate: [Number of children aged 4 - 9 years attending primary level (classes 0 – 5) divided by number of children aged 4 - 9 years] multiplied by 100. Enrolment in katchi is included.
2. Numerator of NER: Raised sum of all individuals aged 4 - 9 years who report currently attending primary level, including katchi class.
3. Denominator of NER: Raised sum of all individuals aged 4 - 9 years who responded to the relevant questions.

NOTES:

- 1.Gross enrolment rate: [Number of children attending middle level (classes 6 - 8) divided by number of children aged 11 - 13 years] multiplied by 100
- 2.Numerator of GER: Raised sum of all individuals who report currently attending middle level (class 6 - 8).
- 3.Denominator of GER: Raised sum of all individuals aged 11 - 13 years who respond to the relevant questions.

NOTES:

- 1.Net enrolment rate: [Number of children aged 10 - 12 years attending middle level (classes 6 - 8) divided by number of children aged 10 - 12 years] multiplied by 100
2. Numerator of NER: Raised sum of all individuals aged 10 - 12 years who report currently attending middle level.
3. Denominator of NER: Raised sum of all individuals aged 10 - 12 years who respond to the relevant questions.

NOTES:

1.Net enrolment rate: [Number of children aged 11 - 13 years attending middle level (classes 6 - 8) divided by number of children aged 11 - 13 years] multiplied by 100. Note that this age range is different from the one used in previous PIHS reports.

2.Numerator of NER: Raised sum of all individuals aged 11 - 13 years who report currently attending middle level.

3.Denominator of NER: Raised sum of all individuals aged 11 - 13 years who respond to the relevant questions.

NOTES:

- 1.Net enrolment rate: [Number of children aged 14 - 15 years attending matric level (classes 9 - 10) divided by number of children aged 14 - 15 years] multiplied by 100.
- 2.Numerator of NER: Raised sum of all individuals aged 14 - 15 years who report currently attending matric level.
- 3.Denominator of NER: Raised sum of all individuals aged 14 - 15 years who respond to the relevant questions.

NOTES:

1. Based on recall: Children reported as having received at least one immunisation expressed as a percentage of all children aged 12-23 months. The data given for PIHS 2001-02 & PIHS 98-99 is not exactly comparable with the released report of 2001-02 as cases of Polio campaign have been excluded to make it comparable with PSLM.

NOTES:

1. Children who suffered from diarrhoea in the 30 days prior to the interview expressed as a percentage of all children aged less than 5 years.
2. Diarrhoea in past 30 days: All three surveys contained a question addressed to the mothers of all children aged less than 5 years where they were asked if they had suffered from an episode of diarrhoea in the past 30 days.
3. Estimates of PIHS 98-99 & 2001-02 have been recalculated for children less than 5 years to make it comparable with the PSLMS 2004-05.

NOTES:

1.Diarrhoea cases where a practitioner was consulted expressed as a percentage of all diarrhoea cases during past 30 in children under 5 years.

2.Cases where a practitioner was consulted: For all the children that reported an episode of diarrhoea in the past 30 days the mothers were asked if they consulted a practitioner for the ailment. The statistics reported here represent the percentage of cases where a practitioner was consulted.

3.Estimates of PIHS 98-99 & 2001-02 have been recalculated for children less than 5 years to make it comparable with PSLMS 2004-05.

NOTES:

1. Household obtaining water from the source indicated expressed as a percentage of the total number of households.
2. Categories: 'Tap water' consists of both tap water inside & out side house; 'Hand pump' includes hand-pumps both inside and outside. Motor pump includes motor pump and tube well; 'Dug well' includes well open and well closed both inside & out side the house; and 'Other' includes public standpipe (supplied by tanker), water seller, canal, river, spring, stream, pond and other.
3. Totals may not add to 100 because of rounding.

NOTES:

1. Households having the type of toilet indicated expressed as a percentage of the total number of household.
2. Categories: "Flush" consists of flush connected to public sewerage, flush connected to septic tank and flush to open drain while "Non-Flush" contains dry raised latrine, dry pit latrine and other.
3. Totals may not add to 100 because of rounding.
