## EXPLANATORY NOTES

### 1. AGRICULTURE

1.1 This table presents information about land utilization, number and area of farms by size, area and production of agricultural crops, vegetables and fruit, crop wise use of fertilizers, imports of fertilizers, acreage covered by plant protection operations, area irrigated, area classified by water table, output of forest and fishing in Pakistan.

1.2 The indices of acreage, quantum and value of important crops including food, fiber and other crops are prescribed in table 1.2. These indices are calculated using the following formula:

$$\text{Area} \quad \frac{\sum A_n}{\sum A_o} \quad \text{Index } I_{an} = \quad \times 100 = \quad \text{Index}$$

$$\text{Quantum} \quad \frac{\sum q_n}{\sum q_o} \quad \text{Index } I_{qn} = \quad \times 100 = \quad \text{Index}$$

$$\text{Value} \quad \frac{\sum p_n q_n}{\sum p_o q_o} \quad \text{Index } I_{vn} = \quad \times 100 = \quad \text{Index}$$

Where:

- $p_n$  is current year price
- $p_o$  is base year price
- $q_n$  is current year quantity.
- $q_o$  is base year quantity
- $A_n$  is current year area
- $A_o$  is base year area

1.3 Provincial Agriculture Departments prepare area and production estimates for all crops. Pakistan Bureau of Statistics collects these crop estimates checks the validity consolidates the same at the national level and then release these estimates at national level after obtaining the approval of competent authority.

1.4 Three estimates of seven crops (Wheat, cotton, rice, sugarcane, gram, potato and onion) are released. Two estimates of thirteen other important crops, (maize, bajra, jowar, sesamum other kharif pulses, other rabi pulses, moong, mash, barley, R&M seeds, tobacco, matter and masoor) are released. For rest of the crops only one estimate is released.

1.5 In the Punjab and Khyber Pakhtunkhwa province first and second acreage estimate of crops for which three estimates are prepared and first acreage estimate of crops for which two estimates are prepared are based on sample surveys. However, final acreage estimates in these provinces are based on the complete count (Khasra Girdawari) undertaken by the Provincial Revenue Departments. In Sindh all acreage estimates are based on sample survey technique. In Balochistan province acreage estimates are prepared on the basis of information supplied by the officials of Agriculture Department.

1.6 The traditional method of estimating production of minor crops consists of multiplying area sown with its estimated yield, which is determined through subjective judgement of the reporting staff. The yield is estimated keeping in view the normal yield fixed on the basis of crop cutting experiments undertaken by the Provincial Agriculture and Revenue Departments during specified period and condition of crop during its growth ascertained from the farmers or based on their own personal judgement. For major crops such as wheat, rice, cotton, sugarcane and maize the above method has been replaced in Punjab, Sindh and Khyber Pakhtunkhwa by objective technique known as crop cutting surveys based on probability sampling technique.

## 2. BALANCE OF PAYMENTS

2.1 Gold and foreign exchange reserves of Pakistan:- (Table 2.1). The statistics shown in the table are received from State Bank of Pakistan. This table shows total Rupee value of Gold and foreign exchange reserves.

Mean maximum and mean minimum temperatures are the arithmetic means of daily maximum and minimum temperatures recorded during the month.

3.2 Climatically, Pakistan enjoys a considerable measure of variety. North and northwestern high mountain ranges are extremely cold in winter while the summer months from April to September are very pleasant. The vast plains of the Indus Valley are extremely hot in summer and have cold weather in winter. The coastal strip in the south has a temperate climate. There is general deficiency in the rainfall. Rains are monsoonal in the origin and fall late in summer. Average rainfall is 762 millimetres per annum.

3.3 Table 3.3 and 3.4 provide monthly data of average (over a 30 year period 1981-2010) normal temperature and rainfall at selected centres respectively.

## **9. Foreign Trade**

9.1 Foreign Trade Statistics refer to the movement of goods into and out of the customs area of Pakistan includes imports, re-imports, exports and re-exports carried through sea, land and air routes. The source documents of information were the shipping bills and bills of entry which has now been modified/revised as good declaration (G.D.) for sea, air and land borne trade filed by the exporters and importers or their agents with custom authorities but after the automation of the trade data by the PRAL & CARE system F.B.S. is getting the soft copy of the data. FBS is downloading the imports/exports data from their system on daily/weekly & monthly basis.

9.2 Import Statistics represent the arrival of goods from foreign countries released by customs either directly or from bonded ware-houses and intended for home consumption or for re-export. Imports are exclusive of, imports into bond, defence stores, gold and silver coins or bullion and currency notes, articles of personal baggage of passengers and trade in-transit through Pakistan.

Re-export statistics represent imported goods subsequently exported to foreign countries without further processing. In export statistics, bunker fuels supplied to ships are included as per its flag. Exports by parcel post are also included. Exports do not include personal effects of passengers and trade-in-transit through Pakistan.

**9.4** The valuation in respect of exports and imports are based on F.O.B. and C.I.F. respectively. The data relating to quantity are those which are given in the G.Ds. The weight recorded is the weight net of packing or container. Quantity figures in some cases are either not reported or expressed in non-standard units with the result that quantity data remain, incomplete and are estimated.

**9.5** Commodities of export & import were classified on the basis of Pakistan Standard Trade Classification which is an adaptation of UN Standard International Trade Classification. This Classification is revised and updated from time to time. Latest revision PSTC-R3 was introduced from July, 1989 and up to June, 2002 External Trade Statistics were compiled and published on the basis of PSTC-R3.

**9.6** In pursuance of recommendation of UN Statistics Division for adoption of Harmonized Commodity Description and coding System(HS) for compilation and dissemination of external trade statistics by member countries and to cater the needs of users, Pakistan Bureau of Statistics in co-operation with Federal Board of Revenue, Pakistan Custom, Ministry of Commerce and Trade Development Authority of Pakistan has prepared Alpha Register of 6050 HS Codes at 8 digit level which was compatible with PCT 2002-2003 but now HS 2002 has been amended by the WCO (World Custom Organization) during the year 2007. FBR has also revised the PCT 2007-2008 which contain 6,913 (HS) PCT codes at 8 digits level. In 2009 -10 PCT contain 6,806 (HS) codes.

## 12. LABOUR

12.1 Labour Force Sample Surveys form a regular feature of Pakistan Bureau of Statistics and are conducted on quarterly basis in selected sample areas covering both rural and urban population of Pakistan. The first series of these surveys was conducted during July, 1963 to June, 1964. Next survey was conducted during 1974-75 and 1978-79. In 1982-83 the survey was conducted on a limited scale, concentrating on current employment and unemployment levels. The latest survey was conducted in 2014-15. The sourced data of latest Labour Force Survey is correctly tabulated and incorporated in Table Nos. 12.1 to 12.4.

12.2 The LFS surveys 2010-11 and onward are based on new industrial classification PSIC 2010.

12.3 From the year 1971-72 revised Pakistan Standard Classification of Occupations (PSCO-68) and Pakistan Standard Industrial Classification of all Economic Activities (PSIC-70) have been adopted which differ slightly from PSCO-65 and PSIC-68 at one digit level.

## 13. MANUFACTURING

13.1 Table No.13.1 contains series of quantum Index Numbers of Large-Scale Manufacturing Industries (QIM) for Pakistan, The index series from 2005-06, cover 112 items contributing 70.3% of value added with base year 2005-2006.

13.2 A brief description about the scope, sources of data, weighting system, formula used for computation of the index series is given below: -

- a) Scope: The index is designed to measure changes in physical output for the Large Scale Manufacturing Industries.
- b) Sources of Data: The production data used for the computation of indices are received from Ministry of Industries, Provincial Bureaus of Statistics and Oil Companies Advisory Committee (OCAC).

- c) **Weights:** The weights have been derived on the basis of 2005-06 CMI value added at factor cost (gross value of production less industrial cost less indirect taxes plus subsidies). In deriving the weights the total value added for Pakistan has been taken to be 100 and the weights at industry level have been taken as percentage of this total whereas weights at items level have been derived on the basis of their relative value of production in the industry to which these items belong. However, in case where only one item has been selected the whole weight of that industry has been assigned to that selected item only.
- d) **Formula used:** Laspeyre's formula has been used for the computation of index

$$I_n = \frac{\sum q_n p_o}{\sum q_o p_o} \times 100 = \frac{\sum \frac{q_n}{q_o} p_o q_o}{\sum p_o q_o} \times 100 = \frac{\sum \frac{q_n}{q_o} w}{\sum w} \times 100$$

numbers which is given below: -

Where  $I_n$  = quantum index number for current period,  $q_o$  and  $p_o$  represent the quantity and prices respectively of the items in the base period,  $q_n$  is the quantity in the current period,  $W$  is the weight of an item and  $\sum W=100$ .

13.3 Table 13.2 contains production data of selected manufacturing items. Production data are collected through voluntary co-operation of various Government and non-government agencies. Since the data collected through non-government agencies takes considerable time for reconciliation of the data therefore, up-to date figures in respect of many items cannot be published in time. However, PBS is trying its level best to reduce the time-lag in publishing of data by taking different measures. Sometimes, the data received from source agencies are revised without the knowledge of PBS. Moreover, there is a possibility in some cases, the data published by PBS may vary from those published by original sources.

13.4 Table Nos. 13.3 to 13.6 cover the data regarding Census of Manufacturing Industries. CMI is conducted under the Industrial Statistics Act, 1942 and covers those establishments which are engaged in manufacturing activities whether for whole or part of the year with single or joint ownership or control and registered under Factories Act, 1934. Factories which are liable for registration have also been covered. If, however, an establishment is engaged in more than one activity and separate accounts are maintained by the establishment for each activity, then separate returns are collected for each such activity. The defence and government workshops though engaged in manufacturing activities and registered under Factories Act are, however, excluded.

13.5 The last CMI was conducted in 2005-06 and covered the variables such as (i) Number of Reporting Establishments (ii) Value of Production (iii) Industrial Cost (iv) Census Value Addition (v) Value of Fixed Assets (vi) Average Daily Person Engaged.
