N.B: Area and production of Rice Crop for the year 2010-11 shows a decrease of 18 percent and 30 percent respectively, over previous year. Decrease in area over last year, is due to heavy flood and breaches of protective bunds of river Indus, which badly affected main paddy growing areas. Moreover, low market returns during last year that discouraged the growers to bring more area under the crop. While decrease in production is attributed to corresponding decrease in area, and attack of different diseases and water logging of early sown crop affected the yield of supreme as well as course varieties to some extent.
