## SECTION-III

## Salient Features

The second quarterly estimates are based on the data of 8810 sample households enumerated through Oct-Dec 2012. Findings are presented in the form of proportions and percentages to provide for all-purpose employability. For absolute numbers, one may refer to the population of Pakistan as per Planning \& Development Division projection, estimated at 180.94 million on $16^{\text {th }}$ November, 2012. Follows a brief account of the survey's second quarter's estimates in comparison with that of the same period of LFS 2010-11, bracketed in chronological order.

## Labour Force Participation Rates

2. Labour force participation rate wanes from ( $33.8 \%, 33.7 \%$ ). Similar configuration obtains by males $(50.0 \%, 49.9 \%)$ and females $(16.8 \%, 16.4 \%)$. Rural rates ( $35.3 \%, 35.6 \%$ ) upturn slightly while urban $(30.9 \%, 30.0 \%)$ follow the overall trend. The pertinent information is contained in the table-1 below.

Rural Areas:

## Activity Status

3. Better part of non agricultural employment is informal. Informal sector waxes (73.3\%, $73.8 \%$ ) while formal wanes $(26.7 \%, 26.2 \%)$.Gender wise, share of males follow the overall pattern while females indicate a sort of opposite changes; decrease in the former while increase in the latter. Area wise, rural's configuration follow the overall pattern while opposite scenario obtains in urban areas.

## Employed: Employment Status

4. Employed persons comprise employees (38.9\%), own account workers (32.9\%), contributing family workers (27.1\%) and employers (1.1\%). More females are engaged as contributing family workers ( $59.8 \%$ ) while, more males are own account workers, employees and employers comparatively. As for change during the comparative period, employees and contributing family workers seem trending up, while own account workers and employers are on wane.
