PREFACE

Pakistan Social and Living Standards Measurement Survey (PSLM), 2014-15 is the tenth round of a series of surveys that were to be conducted up to June 2015. The survey has been conducted with the aim to provide data to be used by the government to monitor development plans at district level and rapid assessment of programmes initiated under Poverty Reduction Strategy (PRSP) in the overall context of MDGs. Going forward this survey would be instrumental in SDG indicators monitoring.

This survey has been conducted covering 78,635 households to provide indicators representative at the District level in the sectors such as Education, Health, Water & Sanitation, Household Economic Situation and Satisfaction by facilities and services used. Accordingly this report provides information on the key social indicators as mentioned above at district level. The fieldwork was carried out between October 2014 and June 2015.

I would like to congratulate Mr. Ayazuddin, Deputy Director General PBS and the whole PSLM team for the successful completion of the task. I also appreciate the efforts of field services for the data collection and Data Processing Centre for the processing of the valuable data and Sample Design section of PBS. The report is also available on the website of PBS.

Comments and suggestions for further improvement of this report in future will be most welcome.

ACKNOWLEDGEMENTS

Pakistan Social and Living Standards Measurement (PSLM) Survey was started in the year 2004 and planned to be conducted up to 2015. It provides Social & Economic indicators in the alternate years at Provincial and District level. The PSLM Survey is a major contribution towards construction of district level database on Education, Health, Household Assets, Water & Sanitation and Household Economic Situation and Satisfaction by facilities and services used. The district level data provides valuable insights into the dynamics of districts according to different aspects and help to evaluate the impact of any changing environment as a result of implementation of the government devolution plans, which were initiated in the overall context of Millennium Development Goal's (MDGs).

This is sixth report of PSLM District level survey after PSLM 2004-05, 2006-07, 2008-09, 2010-11 & 2012-13 and provides information at National/ Provincial and District level. This report contains the data collected from 78,635 household based on 5326 urban & rural Primary sampling units (PSUs). Fieldwork of PSLM 2014-15 was started in October 2014 and completed in June 2015.

The timely completion of the sixth round of the PSLM District level report has been possible because of the enormous hard work and devotion put in by the PSLM management team at headquarters, the Data Processing Centre, PSLM field teams and Sample Design Section of the Pakistan Bureau of Statistics. It is indeed a matter of great pride for the whole organization.

Considering the requirements of the policy makers, planners, researchers and other data users, efforts have been made to improve this report. It is hoped that the data users will find it useful. Any further comments and suggestions for future improvement will be highly appreciated.

(Ayazuddin)

List of Officers Involved In PSLM Survey 2014-15

The PSLM report is produced by the efforts of the following officers/officials of Pakistan Bureau of Statistics listed under the specific tasks:

PLANNING, EXECUTION OF SURVEY AND FINALIZATION OF REPORT: -

§	Mr. Ayazuddin	Deputy Director General
§	Ms. Rabia Awan	Director
§	Mr. Saqib Sultan Khawar	Statistical Officer
§	Ms. Hina Kanwal	Statistical Officer
§	Ms. Kaneez Amna	Statistical Officer
§	Ms. Sana Habib Chaudhary	Statistical Officer

MANAGEMENT TEAM:-

§	Mr.Sajid Akhtar Lodhi	Statistical Officer
§	Ms. Safia Begum	Statistical Officer
§	Ms. Kulsoom Fatima	Statistical Assistant
§	Mr. Khalid Rafique	Statistical Assistant
§	Malik Latifullah	Statistical Assistant
§	Mr. Shazad Asghar	Statistical Assistant

DATA PROCESSING:-

§	Mr. Mumtaz Uddin Shaikh	Ex Deputy Director General
§	Mr. Muhammad Akram Assi	Deputy Director General
§	Mr. Arif Akhtar	Chief System Analyst
§	Mr. Azizullah Bhatti	Chief System Analyst
§	Mr. Muhammad Ehtesham	Chief System Analyst
§	Mr. Mudasir Akhtar	Data Processing Officer
§	Mr. Tahir Mahmood	Data Processing Officer
§	Raja Aurangzeb Khan	Data Processing Assistant

SAMPLE DESIGN: -

§	Mr. Naseer Ahmed	Chief Statistical Officer
§	Mr Muhammad Waseem	Statistical Officer

FIELD OPERATIONS: -

§	Munawar Ali Ghanghro	Director

EXECUTIVE SUMMARY

This report presents district along with National/provincial level findings of the tenth round of the Pakistan Social and Living Standards Measurement (PSLM) Survey 2014-15. In this survey, 78,635 households were covered in the entire country and information was collected from households on a range of social sector issues. These are primarily focussed on the main sectors i.e. Education, Health, Immunisation, Pre/Post Natal care of females, Water & Sanitation, Household perception of the economic situation and Household satisfaction by facilities & services in the overall context of Millennium Development Goals (MDGs).

Indicators between different groups are presented disaggregated by province/district, by region (urban-rural) and by gender. The indicators given in the report have been compared with the previous reports of PSLM surveys, wherever possible.

Education

The Gross Enrolment Ratio (GER) for primary schools (Age 6-10) at National level has decreased to 91 percent in 2014-15 from 92 percent in 2012-13. Although all provinces have shown same trend however, the decrease in overall Pakistan is due to decline in Sindh to 79 percent in 2014-15 from 81 percent in 2012-13. Punjab with 98 percent has the highest GER and Balochistan with 73 percent has the lowest among the provinces. The Net Enrolment Rate (NER) for primary schools (Age 6-10) at National level decreased to 67 percent in 2014-15 as compared to 68 percent in 2012-13. It remains substantially lower than the GER because of the enrolment of overage children. Punjab with 70 percent has the highest NER at primary level whereas Balochistan with 56 percent has the lowest. The PSLM survey collects information on enrolment in all types of schools i.e. public and private. The PSLM 2014-15 shows decrease in the share of primary enrolments in government schools. The overall share has decreased to 62 percent in 2014-15 as compared to 66 percent in 2012-13.

The GER for middle level (Age 11-13) at National level decreased to 62 percent in 2014-15 as compared to 63 percent in 2012-13. Province wise GER at middle level shows that Punjab and Sindh decreased to 64 percent and 55 percent in 2014-15 as compared to 65 percent and 57 percent in 2012-13 respectively, whereas there is increasing trend in Khyber Pakhtunkhwa with 71 percent in 2014-15 as compared to 69 percent in 2012-13, and Balochistan remains stagnant at 65 percent during the period 2014-15 and 2012-13. However, NER (Age 11-13) which gives more realistic picture decreased to 37 percent in 2014-15 as compared to 38 percent in 2012-13. Province wise comparison reveals that, Khyber Pakhtunkhwa with 41 percent has the highest middle level NER whereas Balochistan with 26 percent has the lowest.

The Matric level GER (Age 14-15) for National level has slightly increased to 58 percent in 2014-15 as compared to 57 percent in 2012-13. Here again the provinces follows almost the same pattern as reflected in primary and middle level GER. Punjab with 63 percent and Balochistan with 39 percent are at highest and lowest respectively. NER at National level increased slightly to 27 percent in 2014-15 from 26 percent in 2012-13. Looking at the provinces, Punjab with 29 percent remained at the top and Balochistan with 15 percent has the lowest percentage.

The literacy rate of population (10 years & above) at National level remains stagnant at 60 percent during the period 2014-15 and 2012-13. Literacy remains much higher in urban areas than in rural areas and much higher in men than in women. Punjab with 63 percent is the highest and Balochistan with 44 percent is the lowest among all the provinces. Adult literacy rate (15 years & above) at National level also remains stagnant at 57 percent during the period 2014-15 and 2012-13.

Health

Two measures of immunization coverage are presented in PSLM report, "record based" and "recall & record based" measures for one year old children. Immunization to the child shows that 99 percent have received at least one immunization in 2014-15 as compared to 98 percent in 2012-13. Among provinces Punjab and Sindh has the highest percentage of children who have received at least one immunization with 99 percent each

in 2014-15 as compared to 97 percent and 98 percent in 2012-13 respectively and Balochistan has the lowest percentage with 96 percent in 2014-15 as compared to 92 percent in 2012-13.

The measure of fully immunized children including both recall and record based immunizations remains stagnant at 82 percent during the period 2014-15 and 2012-13. Among the provinces Punjab has the highest percentage of children who are fully immunized based on recall and record with 89 percent which remain stagnant during the period 2014-15 and 2012-13 and Balochistan has the lowest percentage with 51 percent in 2014-15 as compared to 53 percent in 2012-13.

Full immunization based on record increased to 60 percent in 2014-15 from 57 percent in 2012-13. Among provinces Punjab has the highest percentage of children who are fully immunized based on record with 70 percent in 2014-15 as compared to 65 percent in 2012-13 and Balochistan has the lowest percentage with 27 percent in 2014-15 as compared to 29 percent in 2012-13.

Overall percentage of children who have suffered from diarrhoea in the last 30 days prior to survey is 9 percent in 2014-15 as compared to 10 percent in 2012-13. Highest percentage of diarrhoea cases were reported in Balochistan with 11 percent in 2014-15 as compared to 14 percent in 2012-13 and lowest cases were reported in Sindh with 6 percent in 2014-15 as compared to 9 percent in 2012-13. In term of percentage points the decline in the incidence of diarrhoea during the last 30 days was much rapid in Sindh and Balochistan than in other two provinces between 2014-15 and 2012-13.

In overall Pakistan 73 percent of mothers who had given birth in the last three years went for pre-natal consultations during their last pregnancy in 2014-15 as compared to 69 percent in 2012-13. Among provinces Punjab has the highest percentage of mothers visiting for pre-natal consultation with 78 percent in 2014-15 as compared to 73 percent in 2012-13 and Balochistan has the lowest with 47 percent in 2014-15 as compared to 50 percent in 2012-13.

Five doses of Tetanus Toxoid injections are given to women during pregnancy to provide lifetime protection. In overall Pakistan 75 percent of mothers in 2014-15 as compared to 72 percent in 2012-13 had received a tetanus toxoid injection during their last pregnancy. Punjab is at top with 84 percent in 2014-15 as compared to 81 percent in 2012-13 and Balochistan has the lowest with 34 percent in 2014-15 as compared to 31 percent in 2012-13. In term of percentage points, Sindh is increased by 6 percentage points i.e. 69 percent in 2014-15 from 63 percent in 2012-13, mostly accounted by rural areas.

Post-natal consultation with 29 percent remains stagnant during the period 2014-15 and 2012-13. Post-natal consultations are higher in urban areas with 38 percent as compared to rural areas with 25 percent. Sindh is at top with 33 percent in 2014-15 as compared to 35 percent in 2012-13 and Balochistan has the lowest with 21 percent in 2014-15 as compared to 23 percent in 2012-13.

Housing, Water Supply & Sanitation

The housing units by tenure reveals that percentage of households who are living in their own dwelling units declined to 84 percent in 2014-15 from 86 percent in 2012-13, while the remaining 16 percent live in either rented, rent free or subsidized housing units. The comparison of housing units by number of rooms shows that there is increase in housing units with one room, 28 percent in 2014-15 as compared to 26 percent in 2012-13 and there is marginal decline in housing units with 2-4 rooms, 67 percent in 2014-15 as compared to 68 percent in 2012-13. However, houses with 5 or more rooms remains stable at 6 percent during 2014-15 and 2012-13.

In Pakistan 27 percent of the households is using tap water as main source of drinking water; however a decreasing pattern has been observed for last few years as motorized pumping is increasing. Motorized pumping has increased to 33 percent in 2014-15 as compared to 30 percent in 2012-13. Among provinces regarding piped water as main source of drinking water, Sindh with 41 percent has the highest while Punjab with 18 percent has the lowest percentage.

Overall in Pakistan 73 percent of households use flush toilet, 13 percent households have no toilet facility while 13 percent are using non-flush. By comparing provinces Punjab with 79 percent is at the top having flush facility whereas, Balochistan with 31 percent is at the bottom.

The housing units using electricity as source for lighting remains stagnant at 93 percent during the period 2014-15 and 2012-13. Khyber Pakhtunkhwa with 96 percent has the highest percentage of household using electricity as a main source for lighting while Balochistan with 81 percent has the lowest percentage. For cooking purposes gas remained major source as fuel for cooking with 41 percent in 2014-15 as compared to 38 percent in 2012-13. Among provinces Sindh has the highest percentage of households i.e. 56 percent using gas as main fuel for cooking in 2014-15 as compared to 53 percent in 2012-13 and Balochistan has the lowest percentage with 25 percent in 2014-15 as compared to 23 percent in 2012-13.

Household Perception of Economic Situation and Satisfaction by Facilities and Services Used.

Households were asked to compare their economic situation with last year. In response to this question 44 percent in 2014-15 reported no change as compared to 43 percent in 2012-13, whereas 37 percent reported worse or much worse which remains stagnant during 2014-15 & 2012-13 and 19 percent reported better or much better in 2014-15 as compared to 20 percent in 2012-13. However, when asked to compare the economic situation of the community where they live, 62 percent reported no change in 2014-15 as compared to 60 percent in 2012-13, whereas 21 percent reported worse or much worse in 2014-15 as compared to 19 percent in 2012-13 and 13 percent reported better or much better in 2014-15 as compared to 16 percent in 2012-13.

Households were also asked to give opinion about their satisfaction of the facilities/services provided. Only 57 percent of the household were satisfied from Basic Health Facility in 2014-15 as compared to 53 percent in 2012-13. The household which were satisfied with the Family Planning Service were 83 percent in 2014-15 as compared

to 76 percent in 2012-13. The household which were satisfied with Schools were 94 percent in 2014-15 as compared to 93 percent in 2012-13. Household Satisfaction with Police remains stagnant at 48 percent during the period 2014-15 and 2012-13.

Notes:

1. Results regarding Balochistan for the PSLM survey 2014-15 may please be read with caution, as the large number of areas i.e. 108 were dropped from the scope of the survey which also includes all areas of Panjgur and Kech district out of the total 790 areas. This is likely to affect the overall results of Balochistan province, whereas during the PSLM survey 2012-13 only 21 areas of Panjgur district were dropped, therefore the comparison for the two rounds may not be truly comparable for overall Balochistan.

1. Introduction

1.1 The PSLM

The Pakistan Social and Living Standards Measurement Survey is one of the main mechanism for monitoring the implementation of the development projects and tracking of the MDGs. It provides a set of district level representative, population-based estimates of social indicators and their progress under the MDGs. These include intermediate as well as 'output' measures, which assess what is being provided by the social sectors, e.g. enrolment rates in education. They include a range of 'outcome' measures, which assess the welfare of the population, e.g. Immunization Rate. Policy makers need to know, for example, whether the poor have benefited from the programme or whether increased government expenditure on the social sectors has been captured by the better off.

In the remainder of this introduction, a description of the PSLM Survey 2014-15 is provided. Data relating education, health, household assets / amenities, immunization, pre and post-natal care and satisfaction of services is given in the following chapters.

Objectives

The data generated though PSLM Survey is used by the government in formulating the poverty reduction strategy as well as development plans at district level. The indicators are developed at district level in the following sectors.

1. Education
2. Health
3. Water & Sanitation.
4. Household Assets/Amenities.
5. Satisfaction to Service Delivery.

1.2 SAMPLE DESIGN OF PSLM SURVEY 2014-15 (DISTRICT LEVEL)

Universe: The universe for Pakistan Social and Living Standards Measurement Survey (PSLM) consists of all urban and rural areas of the four provinces of Pakistan defined as such by 1998 Population Census excluding FATA and military restricted areas. The population of excluded areas constitutes about 2% of the total population.

Sample Design: A stratified two-stage sample design is adopted for the survey.

Sampling Frame: Pakistan Bureau of Statistics (PBS) has developed its own area sampling frame for both Urban and Rural domains. Each city/town is divided into enumeration blocks. Each enumeration block is comprised of 200 to 250 households on the average with well-defined boundaries and maps. The list of enumeration blocks are updated from field on the prescribed proforma by Quick Count technique for urban domain in 2013 and the updated list of villages/mouzas/dehs or its part (block), based on House Listing 2011 for conduct of Population Census are taken as sampling frames. Enumeration blocks are considered as Primary Sampling Units (PSUs) for urban and rural domains respectively.

Stratification Plan

Urban Domain: Large cities Karachi, Lahore, Gujranwala, Faisalabad, Rawalpindi, Multan, Sialkot, Sargodha, Bahawalpur, Hyderabad, Sukkur, Peshawar, Quetta and Islamabad are considered as large cities. Each of these cities constitutes a separate stratum, further sub-stratified according to low, middle and high income groups based on the information collected in respect of each enumeration block at the time of demarcation/ updating of urban area sampling frame.

Remaining Urban Areas: In all the four provinces after excluding the population of large cities from the population of an administrative division, the remaining urban population is grouped together to form a stratum.

Rural Domain: Each administrative district for all four provinces namely Punjab, Sindh, Khyber Pakhtunkhwa (KP) and Balochistan is considered as an independent stratum.

Selection of primary sampling units (PSUs): Enumeration blocks in both Urban and rural domains are taken as Primary Sampling Units (PSUs). Sample PSUs from each ultimate stratum/sub-stratum are selected with probability proportional to size (PPS) method of sampling scheme. In both Urban and Rural domains, the number of households in an enumeration block is considered as measure of size.

Selection of secondary sampling units (SSUs): The listed households of sample PSUs are taken as Secondary Sampling Units (SSUs). A specified number of households i.e. 12 from each urban sample PSU and 16 from rural sample PSU are selected with equal probability using systematic sampling technique with a random start.

Sample Size and its Allocation: Keeping in view the objectives of the survey, the sample size for the four provinces has been fixed at 5428 sample blocks (PSU's) comprising 81992 households (SSU's), which is expected to produce reliable results at the district level. It is worth mentioning here that Panjgur district of Balochistan was dropped from the scope of the survey at the allocation stage due to prevailing situation in Panjgur district. While 7 PSUs from Sindh, 13 PSUs from KP and 82 PSUs from Balochistan province (including Kech district) were dropped from the scope of the survey during execution of the survey due to law and order situation. The province wise sample size and its allocation is given as under;

PROFILE OF THE PSU'S AND SSU'S FOR PSLM SURVEY 2014-15

PROVINCE	Fixed for the survey 2014-15			Covered during the survey 2014-15		
	Urban	Rural	Total	Urban	Rural	Total
PSUs:						
Punjab	594	1860	2454	594	1860	2454
Sindh	376	907	1283	375	901	1276
KP	104	777	881	104	764	868
Balochistan	113	651	764	110	572	682
Islamabad	27	19	46	27	19	46
Overall	**1214**	**4214**	**5428**	**1210**	**4116**	**5326**
SSUs/Households						
Punjab	7128	29760	36888	6814	29188	36002
Sindh	4512	14512	19024	4399	14336	18735
KP	1248	12432	13680	1184	11898	13082
Balochistan	1356	10416	11772	1276	8971	10247
Islamabad	324	304	628	292	277	569
Overall	**14568**	**67424**	**81992**	**13965**	**64670**	**78635**

Note: Non-contact and refusal households are excluded from covered PSUs and SSUs.

Province wise detail of dropped sample areas (PSUs) and sample households (SSUs) is shown as under:-

Province/Area	Sample Enumeration Blocks (PSUs)			Sample Households (SSUs)		
	Urban	Rural	Total	Urban	Rural	Total
Khyber Pakhtunkhwa	-	13	13	-	208	208
Punjab	-	-	-	-	-	-
Sindh	1	6	7	12	96	108
Balochistan	3	79	82	36	1264	1300
Pakistan	**4**	**98**	**102**	**48**	**1568**	**1616**

Note: In Balochistan, two districts namely Kech and Panjgur have been dropped from the scope of the survey.

Estimation Procedures:

Detail of estimation procedures for estimates and their variances is attached as Annexure-I.

1.3 Objectives and scope of analysis

This is the sixth analytical report containing district level indicators of the PSLM Survey. It provides an overview of the findings in all sectors at district levels. Given that the PSLM is a large, complex household survey that collects information on a number of different topics, the tabulations presented here comprise the detailed tables at National/ Provincial/ District levels.

1.4 Household and Survey Questionnaire

At both individual and household level, the PSLM Survey collects information on a wide range of topics using an integrated questionnaire. The questionnaire comprises a number of different sections, each of which looks at a particular aspect of household behavior or welfare. Data collected under Round X includes Education, Health, Water & Sanitation and Household Economic Situation & Satisfaction by facilities and services use.

1.5 Data Quality and Reliability Measures

Data quality in PSLM Survey has been ensured through built in system of checking of fieldwork by the supervisors in the field as well as teams from the headquarters. Regional/ Field offices ensured the data quality through preliminary editing at their office level. The entire data entry was carried out at the PBS headquarter Islamabad and the data entry programme used had a number of in built consistency checks. This is the 6th round of district level survey and it has been observed that overall indicators do follow the usual pattern at national/provincial levels. However, in certain districts particularly of Balochistan province there are variations in indicators between 2004-05, 2006-07, and 2008-09, 2010-11 , 2012-13 and 2014-15 which may be due to prevailing situation in the province, which probably lead to under/over reporting of events.

2. EDUCATION

2.1 Introduction

Education is the process by which society transmits its accumulated knowledge, values and skills from one generation to the next. It plays vital role in bringing social development, economic prosperity and to enhance the individual's potentials. Education introduces and prepares the nation to cope with the new orders of the modern age.

The idea which is also globally perceived by adopting the MDG in the year 2000 is exclusively focus on the discussions and analysis on economic and social development indicators. Keeping in view the agenda government has formulated a policy to provide quality education which is accessible and affordable for all. The some of the key areas for improving education system are as follows:

- To expand public provision of primary education.
- To increase enrolments faster than the growth in population.
- To provide and ensure equal educational opportunities to all the citizens of Pakistan.
- To put great stress on the primary level education because it forms the core of the literate population.
- To improve the functioning & utilisation of existing schools, improve the quality of education and increase enrolments.
- To improve access to education and expand the primary education system.

It is worth mentioning that Islam places great emphasis on acquiring education for both men and women. The Holy Prophet of Allah (S.A.W.W) has said in a Hadith which means: *"Attainment of knowledge is a must for every Muslim"*.

PSLM data on Education is one of the major source for monitoring MDG's. Among the eight goals the two goals cover through PSLM surveys.

1. Under goal 2, (Achieve Universal Primary Education), two indicators are monitored which are "Net primary enrolment" and "Literacy rate".

2. Under goal 3, (Promote Gender Equality and Women Empowerment), two indicators are monitored "Gender parity index" for primary and secondary education and "Youth literacy GPI".

PSLM survey producing key indicators on education is a good source for the federal government as well as for the provinces to overview strengths and weaknesses of their respective programmes and identify grey areas for further interventions. However, this chapter will cover key indicators on school attendance, enrolment rates and literacy.

2.2 School attendance

The population of ten years and older that has ever attended schools at National level is 62 percent in 2014-15 as compared to 61 percent in 2012-13. This proportion is much higher in urban areas than in rural areas 77 percent and 53 percent respectively and higher in men than in women 72 percent and 51 percent respectively. Province wise comparison reveals that Punjab with 65 percent in 2014-15 as compared to 64 percent in 2012-13 have the highest proportion of population that has ever attended school followed by Sindh with 61 percent in 2014-15 as compared to 60 percent in 2012-13. Khyber Pakhtunkhwa (KP) and Balochistan remains stagnant at 55 percent

Figure 2.1: Ever Attended School

and 44 percent during the period 2014-15 and 2012-13 respectively. The school attendance in Islamabad (Federal Capital) is 85 percent. While observing the district level position, Rawalpindi with 83 percent, Karachi with 83 percent, Abbottabad and Haripur with 72 percent and Gwadar with 63 percent are the top ranked districts within their respective provinces. On the other hand Rajanpur with 38 percent, Kashmore with 33 percent, Kohistan and Tor Ghar with 27 percent and Jhal Magsi with 24 percent are the districts at the bottom within their respective provinces.
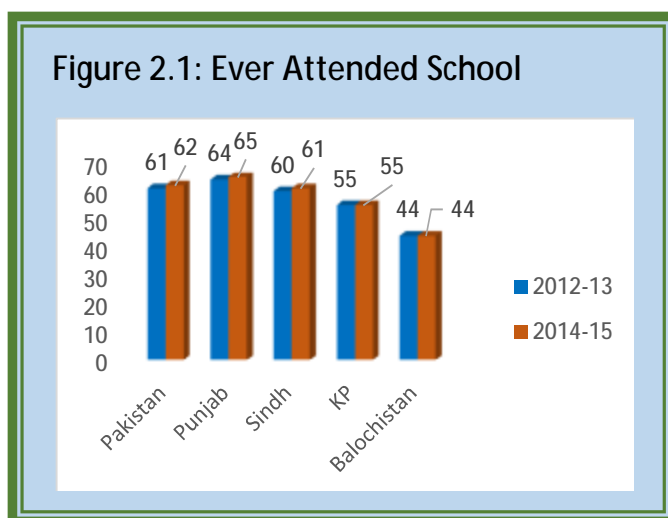

While analysing gender disparity in enrolments it is observed that significant disparities exist in KP with 74 percent males and 36 percent females enrolment followed by Balochistan with 60 percent males and 25 percent females enrolment. District wise comparison reveals that significant gender difference exist in following districts, D.G.Khan with 58 percent males and 30 percent females, Kashmore with 48 percent males and 17 percent females, Kohistan with 45 percent males and only 7 percent females and Dera Bugti with 43 percent males and only 4 percent females enrolment within their respective provinces (Table 2.1).

At National level, population that has completed primary level is 52 percent in 2014-15 as compared to 51 percent in 2012-13. Province wise comparison reveals that Punjab remains stagnant at 54 percent during the period 2014-15 and 2012-13 and have the highest proportion of

population that has completed primary level followed by Sindh with 53 percent in 2014-15 as compared to 52 percent in 2012-13, KP also remains stagnant at 44 percent during the period 2014-15 and 2012-13 and Balochistan have the lowest percentage of population who completed primary level with 35 percent in 2014-15 as compared to 34 percent in 2012-13. In Islamabad the population that has

Figure 2.2: Completed Primary Level
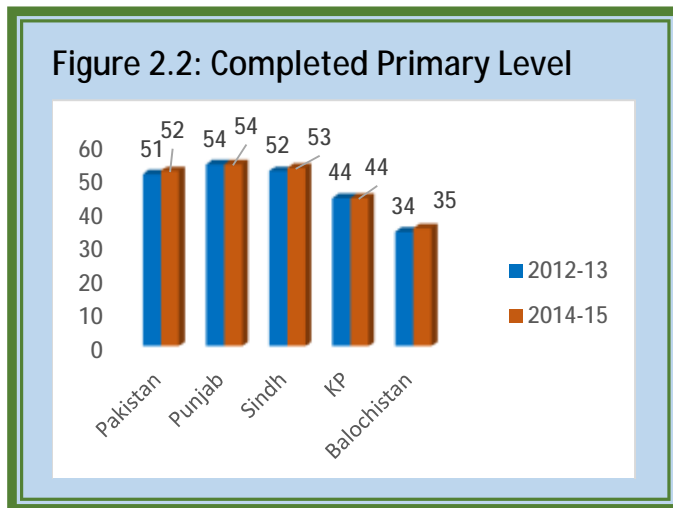

completed primary level is 77 percent. While observing the district level position, Rawalpindi with 75 percent, Karachi with 76 percent, Abbottabad with 62 percent and Mastung with 53 percent are the best performing districts within their respective provinces. Whereas Rajanpur with 29 percent, Kashmore and Tando Muhammad Khan with 27 percent, Tor Ghar with 15 percent and Jhal Magsi with 19 percent are the lowest districts within their respective provinces. Highest gender differences are observed in the following districts within their respective provinces in completion of primary level i.e. D.G.Khan with 45 percent males and 23 percent females, Kashmore with 40 percent males and 14 percent females, Kohistan and Tor Ghar with 30 percent males and only 3 percent females and Killa Saifullah with 63 percent males and only 4 percent females (Table 2.2).

2.3 Enrolment Rates

The comparison of GERs and NERs have been done using both standard definition by using age group 5-9 for primary, 10-12 for middle and 13-14 for matric and the same are presented in the table with part 'B' and keeping in view the ground realities in the context of Pakistan it is felt that the age group 6-10 for primary, 11-13 for middle and 14-15 for matric appears to be more practical and realistic, therefore these groups for enrolments are presented with part 'A'.

2.4 Primary Enrolment Rates

2.4.1 Gross Enrolment Ratio (GER)

The GER, sometimes referred to as the participation rate, is the number of children attending primary schools divided by the number of children who ought to be attending. The GERs are presented in this report in different ways: excluding and including katchi class and for different age groups.

Table 2.3(a) shows the gross primary level enrolment ratio at National level excluding katchi for the age group 6-10 years and Table 2.3(b) for age 5-9 years. The GER for the age group 6-10 years at National level has decreased to 91 percent in 2014-15 as compared to 92 percent in 2012-13. Province wise comparison shows that, Punjab, KP and Balochistan remains stagnant at 98 percent, 92 percent and 73 percent respectively during the period 2014-15 and 2012-13. Whereas Sindh has decreased to 79 percent in 2014-15 from 81 percent in 2012-13. The Gross Enrolment Ratio in Islamabad is 120 percent. While observing the district level position, Chakwal with 121 percent, Dadu with 100 percent, Abbottabad with 112 percent and Gwadar with 102 percent are the top ranked districts within their respective provinces. Whereas Rahim Yar Khan with 68 percent, Tando Muhammad Khan with 51 percent, Kohistan with 56 percent and Dera Bugti with 33 percent are the bottom ranked districts within their respective provinces. Significant gender differences are evident in GERs, the highest differences are in Sheerani district of

Figure 2.3: GER at Primary Level Age (6-10)
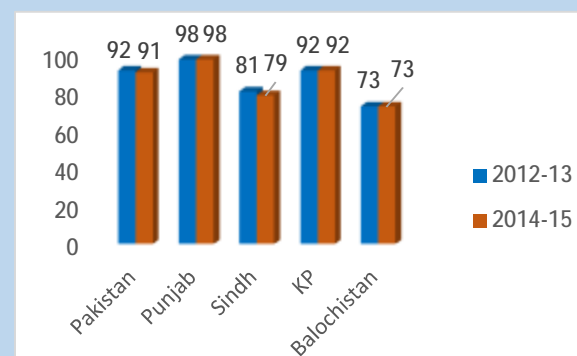

Figure 2.4: Gender-wise Difference between provinces
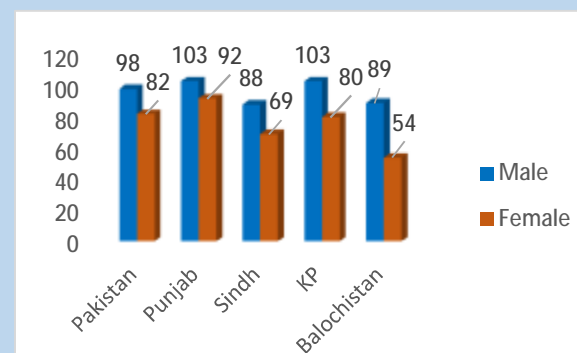

Balochistan with 92 percent enrolment for males and only 9 percent enrolment for females (Table 2.3a).

Almost similar patterns are observed when age group is expanded to 5-9 years. The GER for the age group 5-9 years at National level has decreased to 89 percent in 2014-15 as compared to 91 percent in 2012-13. Province wise comparison shows that all the provinces has slightly decreased, Punjab at 97 percent in 2014-15 from 98 percent in 2012-13, Sindh at 79 percent in 2014-15 from 81 percent in 2012-13, KP at 90 percent in 2014-15 from 91 percent in 2012-13 and Balochistan at 71 percent in 2014-15 from 73 percent in 2012-13 (Table 2.3b).

The GER at National Level is 93 percent in 2014-15 as compared to 92 percent in 2012-13, when katchi class is included and the age group is expanded to Children 4-9 years old. The pattern within districts in the provinces is more or less similar to GERs without including katchi class (Table 2.4).

The PSLM 2014-15 collected information on enrolment in all types of schools including the private and government sectors. Table 2.5 shows the GER in government primary schools. It is calculated as the number of children enrolled in government primary schools divided by the number of children of primary school age.

At National level GER in government primary schools has decreased to 55 percent in 2014-15 as compared to 60 percent in 2012-13. Province wise comparison reveals that there is overall declining trend in GER for government primary schools, Punjab at 54 percent in 2014-15 as compared to 60 percent in 2012-13, Sindh at 50 percent in 2014-15 as compared to 54 percent in 2012-13, KP at 62 percent in 2014-15 as compared to 66 percent in 2012-13 and Balochistan at 64 percent in 2014-15 as compared to 67 percent in 2012-13. GER in government primary schools in Islamabad is 55 percent. While observing district level comparison, Layyah with 88 percent,

Figure 2.5: GER in Government Primary School

Tharparkar with 73 percent, Lower Dir with 82 percent and Gwadar with 94 percent have the
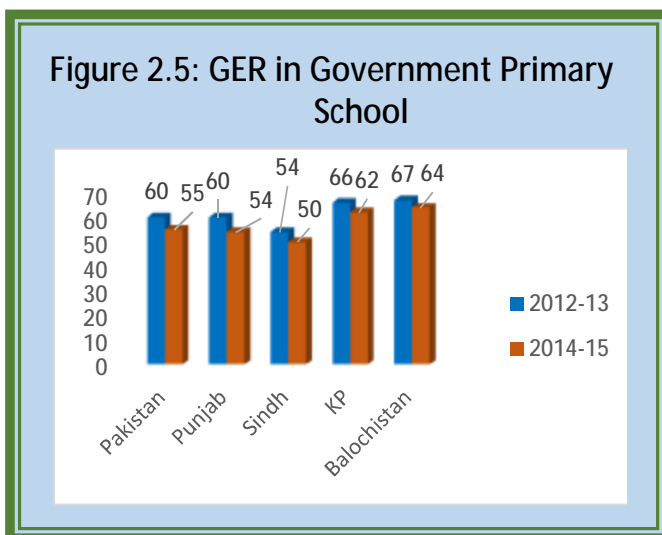

highest GER in government schools within their respective provinces. Whereas Bahawalpur with 34 percent, Karachi with 23 percent, Peshawar with 41 percent and Dera Bugti with 29 percent have the lowest government primary GER within their respective provinces. Here an interesting fact is observed that apart from Islamabad, which has a rich facility of Government schools and colleges, the general trend in all other big cities shows an increasing trend for private educational facilities. Results reveals that the absence of private schools leaves no alternatives and makes government schools a priority in small districts (Table 2.5).

2.4.2 Net Enrolment Rates (NER)

The NER at primary level refers to the number of students enrolled in primary schools of primary school age divided by the number of children in the age group for that level of education. Primary NER is the number of children aged 6 to 10 years attending primary level divided by the number of children aged 6 to 10 years.

The NER for Pakistan has decreased to 67 percent in 2014-15 from 68 percent in 2012-13. Province wise comparison reveals that Punjab and Sindh has shown slight decline, Punjab at 70 percent in 2014-15 from 72 percent in 2012-13 and Sindh at 61 percent in 2014-15 from 62 percent in 2012-13, while KP increased to 71 percent in 2014-15 from 68 percent in 2012-13 and Balochistan has shown slight increase to 56 percent in 2014-15 from 55 percent in 2012-13. Primary level NER for Islamabad is 90 percent. Comparing primary level NERs for districts, Jhelum with 91 percent, Dadu with 81 percent, Mardan with 83 percent and Gwadar with 82 percent are top ranked districts within

Figure 2.6: NER at Primary Level Age (6-10)

their respective provinces. Whereas Rahim Yar Khan with 50 percent, Tando Muhammad Khan with 35 percent, Kohistan with 37 percent and Dera Bugti with 28 percent are at bottom within their respective provinces. The NERs at primary level shows that females have a lower enrolment rate than males and the difference is markedly larger in rural areas than in urban areas (Table 2.6a).
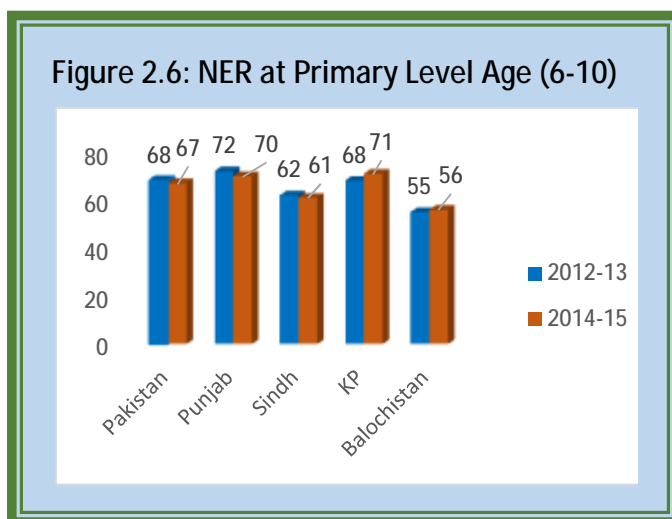

Net enrolment rate at primary level for children 5-9 years shows almost same pattern, there is increasing trend in KP from 54 to 56 percent and slight increase in Balochistan province from 45 to 46 percent whereas the other two provinces shows declining trend. Primary level NER age (5-9) for Islamabad is 82 percent (Table 2.6b).

NER at primary level for age 4-9 including katchi class shows increasing pattern in overall Pakistan and all provinces like Gross Enrolment Ratio at primary level age 4-9 (Table 2.7).

NER for government primary schools is the number of children aged 5-9 years enrolled in government primary schools divided by the total number of children aged 5-9. Like the GER for government schools, it measures the extent to which publicly provided education is reaching its target group. However, this measure excludes overage children who are enrolled in primary schools. In Overall Pakistan there is a decline to 34 percent in 2014-15 from 37 percent in 2012-13. By analysing provinces it is revealed that NER in Punjab decreased to 32 percent in 2014-15 from 36 percent in 2012-13, Sindh decreased to 33 percent in 2014-15 from 36 percent in 2012-13, KP slightly increased to 38 percent in 2014-15 from 37 percent in 2012-13 and Balochistan also slightly increased to 41 percent in 2014-15 from 40 percent in 2012-13. The NER for Government primary schools within districts follows a similar pattern as observed for NERs for the primary enrolment (Table 2.8).

Figure 2.7: NER in Government Primary School
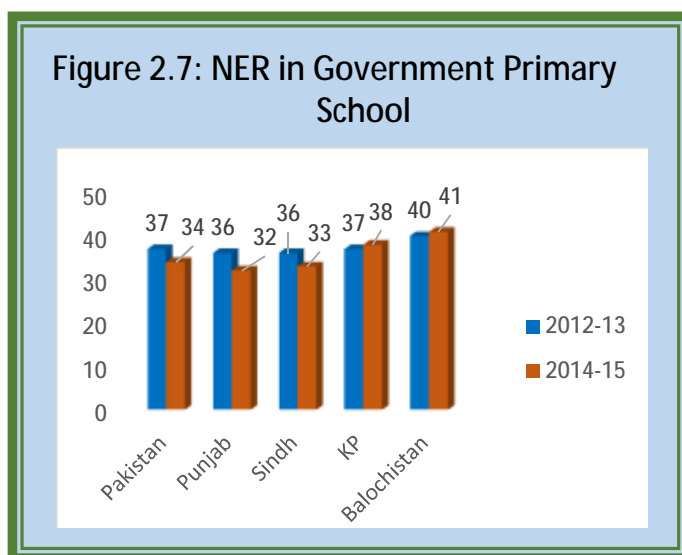

2.4.3 Primary Level Enrolment in Government School

The percentage of primary school students who are enrolled in government schools is shown in Table 2.9 (a). The government share of primary enrolment at National level is 62 percent in 2014-15 as compared to 66 percent in 2012-13. Province wise comparison reveals that there is overall declining trend for enrolment in government primary schools. Punjab at 56

percent as compared to 61 percent in 2012-13, Sindh at 64 percent as compared to 67 percent in 2012-13, KP at 69 percent as compared to 72 percent in 2012-13 and Balochistan at 90 percent as compared to 91 percent in 2012-13. Primary level enrolment in government schools in Islamabad is 48 percent. While observing district level position, Bhakkar with 79 percent,

Figure 2.8: Primary Level Enrolments in Government School

Shahdadkot with 93 percent, Upper Dir and Tor Ghar with 96 percent and Nushki, Kachhi (Bolan) and Washuk with 100 percent are the top ranked districts within their respective provinces. Whereas Lahore with 35 percent, Karachi with 23 percent, Peshawar with 43 percent and Quetta with 75 percent have the lowest primary enrolment in government schools within their respective provinces. The above analysis reflects that developed districts have larger share of private education whereas less developed districts mainly depend on government educational facilities (Table 2.9a).
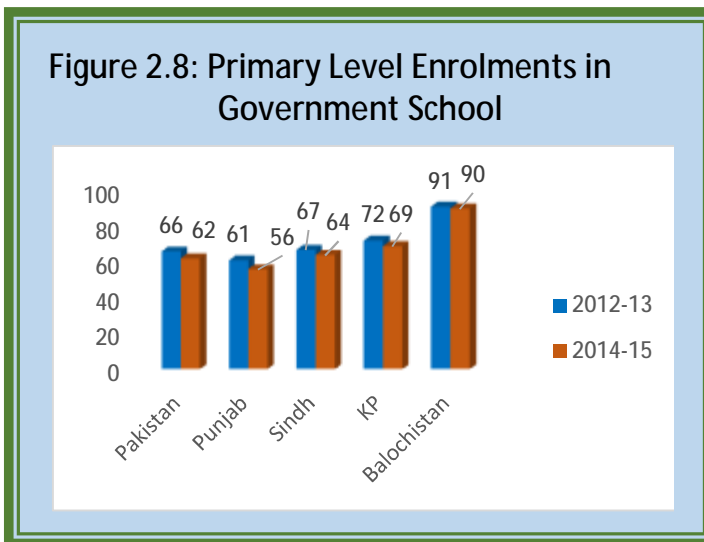

2.5 Middle Enrolment Rates

2.5.1 Gross Enrolment Ratio (GER)

Gross Enrolment Ratio for the middle level with age group 11-13 years old are presented in Tables 2.10(a). The GER for the middle level age 11-13, for Pakistan as a whole decreased to 62 percent in 2014-15 as compared to 63 percent in 2012-13. The middle level enrolment in urban areas remains stagnant at 77 percent during the period 2014-15 and 2012-13, whereas it marginally decreased in rural areas i.e. 55 percent in 2014-15 as compared to 56 percent in 2012-13. Province wise

Figure 2.9: GER at Middle Level Age (11-13)
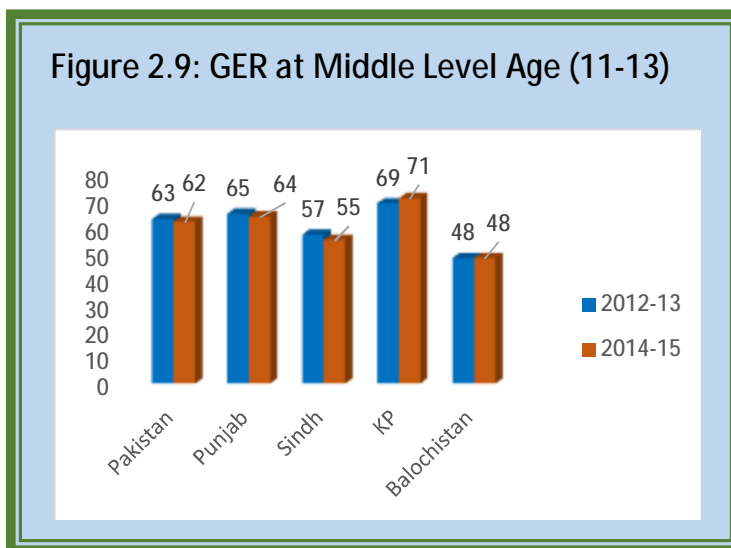

situation of GER at middle level reveals that, Punjab and Sindh decreased to 64 percent and 55 percent in 2014-15 as compared to 65 percent and 57 percent in 2012-13 respectively, While KP increased to 71 percent in 2014-15 from 69 percent in 2012-13 and Balochistan is stagnant at 48 percent during the period 2014-15 and 2012-13. GER for middle level in Islamabad is 104 percent. Comparing middle level GERs for districts, result shows that Chakwal with 107 percent, Karachi with 83 percent, Swabi with 102 percent and Quetta with 78 percent are the best performing districts within their respective provinces. While Bahawalpur with 39 percent, Thatta with 27 percent, Kohistan with 26 percent and Dera Bugti with 23 percent have lowest GERs within their respective provinces. Highest Gender disparity is observed in Kohlu district of Balochistan with 56 percent males and only 4 percent female gross enrolment in middle level (Table 2.10a).

Tables 2.10(b) is also included for GER at middle level by changing age group from 11-13 years to 10-12 years, to make comparison and to see the impact on the Gross Enrolment Ratios. The GER for the middle level age 10-12, for Pakistan as a whole decreased to 55 percent in 2014-15 as compared to 56 percent in 2012-13. It shows almost the same pattern for provinces which is followed in table 2.10a.

2.5.2 Net Enrolment Rates (NER)

Net enrolment rates for the middle level with age group 11-13 years old are presented in Tables 2.11(a). Net enrolment rates at the middle level are much lower than Gross Enrolment Ratios. This is due to the large number of overage children that are enrolled in these classes. NER at middle level decreased to 37 percent in 2014-15 as compared to 38 percent in 2012-13. Province wise comparison also reveals that all provinces are more or less at the same pattern of year 2012-13. The district level comparison within the provinces depicts NERs have almost the same patterns which are observed

Figure 2.10: NER at Middle Level Age (11-13)
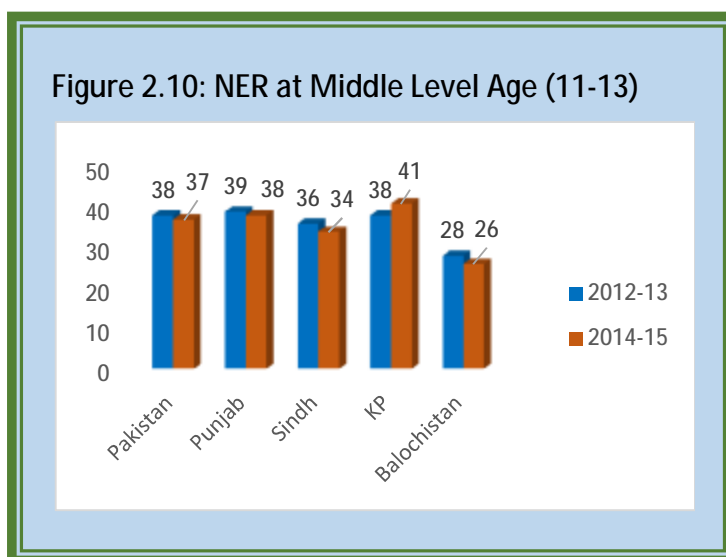

for GERs. Islamabad with 67 percent is at top in the country whereas Killa Abdullah with 12 percent enrolment is at the bottom (Table 2.11a).

Tables 2.11(b) is also prepared by changing age group from 11-13 years to 10-12 years. NER for middle level with age group 10-12 is stagnant at 22 percent during the period 2014-15 and 2012-13. Province wise comparison reveals that Punjab and KP remains stagnant at 25 percent and 21 percent respectively during the period 2014-15 and 2012-13, Sindh and Balochistan decreased to 18 percent and 13 percent in 2014-15 as compared to 19 percent and 14 percent in 2012-13 respectively (Table 2.11b).

2.6 Matric Enrolment Rates

2.6.1 Gross Enrolment Ratio (GER)

At matric level, GER for the age group 14-15 at National level has slightly increased to 58 percent in 2014-15 from 57 percent in 2012-13. Province wise comparison reveals that Punjab slightly increased to 63 percent in 2014-15 from 62 percent in 2012-13, Sindh and KP remains stagnant at 51 percent and 55 percent respectively, While Balochistan increased to 39 percent in 2014-15 as compared to 33 percent in

Figure 2.11: GER at Matric Level Age (14-15)
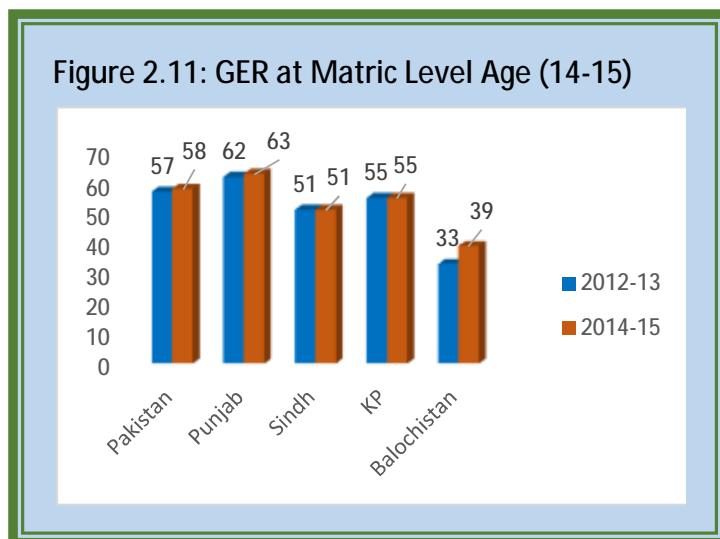

2012-13. The GER at matric level in Islamabad is 106 percent. While district level position reveals that, Rawalpindi with 99 percent, Karachi with 89 percent, Chitral with 84 percent and Quetta with 69 percent have the highest GER at matric level within their respective provinces. However, Rahim Yar Khan with 33 percent, Sujawal with 14 percent, Kohistan with 15 percent and Dera Bugti with 9 percent have the lowest level of gross enrolment in matric within their respective provinces. District Barkhan with 59 percent males and only 2 percent females in Balochistan have shown the widest gender disparity at matric level (Table 2.12a).

Table 2.12(b) is regarding GER for matric level by changing age group from 14-15 years to 13-14 years. The GER for matric at National level is stagnant at 59 percent during the period 2014-15 and 2012-13. It shows more or less the same pattern for provinces which are followed in table 2.12a.

2.6.2 Net Enrolment Rates (NER)

Net enrolment rates for the matric level with age group 14-15 years old are presented in Tables 2.13(a). The NER for Pakistan as a whole is slightly increased to 27 percent in 2014-15 as compared to 26 percent in 2012-13. Province wise comparison reveals that Punjab slightly increased to 29 percent in 2014-15 from 28 percent in 2012-13, Sindh remains stagnant at 25 percent during the period 2014-15 and 2012-13, while KP and Balochistan

Figure 2.12: NER at Matric Level Age (14-15)
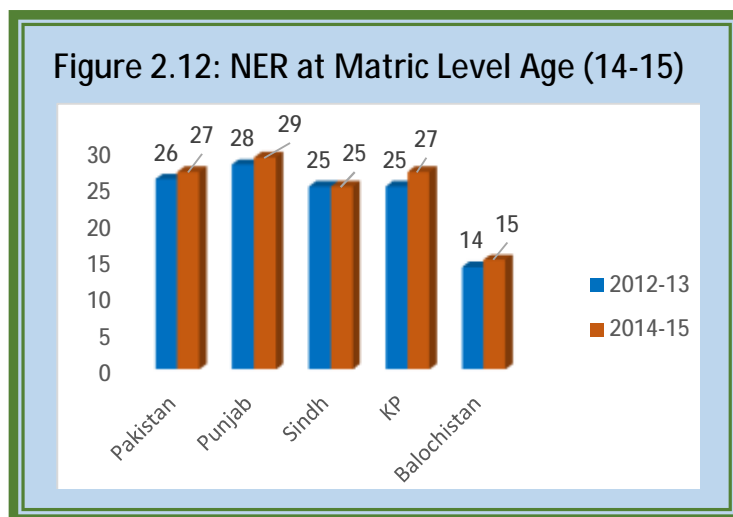

increased to 27 percent and 15 percent in 2014-15 from 25 percent and 14 percent in 2012-13 respectively. Matric level NER for Islamabad is 49 percent. Comparing primary level NERs for districts, Rawalpindi with 49 percent, Karachi with 39 percent, and Karak with 39 percent and Mastung with 40 percent are top ranked districts within their respective provinces. Whereas Rahim Yar Khan with 15 percent, Thatta with 3 percent, Kohistan with 4 percent and Barkhan with 5 percent (lowest Matric NER in overall country) are at bottom within their respective provinces (Table 2.13a).

Tables 2.13(b) have been added for NER, for matric level by changing age group from 14-15 to 13-14 for our readers who are interested to know the pattern for the age group 13-14. NER for matric level with age group 13-14 shows lower enrolments i.e. 14 percent as compared to age group 14-15 i.e. 27 percent as it seems more practical interval for matric level.

2.7 Literacy

Literacy is an important indicator of education as its improvement is likely to have an impact on other important indicators of welfare. The literacy rate for population 10 years and above at National level remains stagnant at 60 percent during the period 2014-15 and 2012-13. Literacy remains much higher in urban areas with 76 percent than in rural areas with 51 percent and much higher in men with 70

Figure 2.13: Literacy (age >=10)
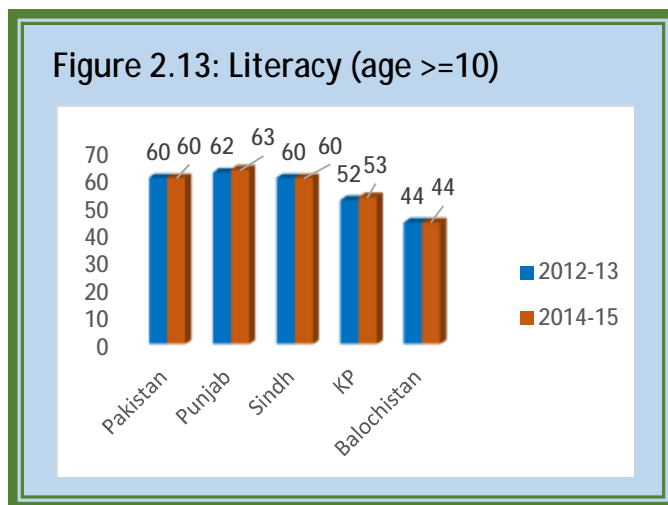

percent than in women with 49 percent. Province wise comparison reveals that Punjab leads with 63 percent in 2014-15 as compared to 62 percent in 2012-13, followed by Sindh which remains stable at 60 percent, KP with 53 percent in 2014-15 as compared to 52 percent in 2012-13, and Balochistan which remains stagnant at 44 percent during the period 2014-15 and 2012-13. Literacy rate of Islamabad is 85 percent. District level comparison shows that, Rawalpindi with 83 percent, Karachi with 82 percent, Abbottabad and Haripur with 69 percent and Quetta with 63 percent are the top ranked districts within their respective provinces. Whereas Rajanpur with 38 percent, Tando Mohammad Khan with 30 percent, Tor Ghar with 23 percent and Dera Bugti and Jhal Magsi with 25 percent are at bottom within their respective provinces (Table 2.14 a).

Adult literacy rate for the population (aged 15 and above) is stagnant at 57 percent during the period 2014-15 and 2012-13. The pattern among districts within the provinces is similar to the Literacy rate of population 10 years and above (Table 2.14 b).

TABLE 2.1   POPULATION THAT HAS EVER ATTENDED SCHOOL BY- PROVINCE AND DISTRICTS.

NOTES:
1.   Gross enrolment rate: [Number of children attending primary level (classes 1-5) divided by number of children aged 5 - 9 years] multiplied by 100. Enrolment in katchi is excluded.
2.   Numerator of GER: Raised sum of all individuals who report currently attending primary level.
3 .   Denominator of GER: Raised sum of all individuals aged 5 - 9 years who respond to the relevant questions.

NOTES:
1.   Net enrolment rate: [Number of children aged 4 - 9 years attending primary level (classes 0 – 5) divided by number of children aged 4 - 9 years] multiplied by 100. Enrolment in katchi is included.
2.   Numerator of NER: Raised sum of all individuals aged 4 - 9 years who report currently attending primary level, including katchi class.
3.   Denominator of NER: Raised sum of all individuals aged 4 - 9 years who responded to the relevant questions.

NOTES:
1. Net enrolment rate in government primary schools: [Number of children aged 5 - 9 years attending government primary schools (classes 1-5) divided by number of children aged 5 - 9 years] multiplied by 100. Enrolment in katchi is excluded.
2. Numerator of NER: Raised sum of all individuals aged 5 - 9 years who report currently attending primary level in Government schools, excluding katchi.

NOTES:

1. Net enrolment rate: [Number of children aged 11 - 13 years attending middle level (classes 6 - 8) divided by number of children aged 11 - 13 years] multiplied by 100. Note that this age range is different from the one used in previous PIHS reports.

2. Numerator of NER: Raised sum of all individuals aged 11 - 13 years who report currently attending middle level.

3. Denominator of NER: Raised sum of all individuals aged 11 - 13 years who respond to the relevant questions.

NOTES:
1. Net enrolment rate: [Number of children aged 14 - 15 years attending matric level (classes 9 - 10) divided by number of children aged 14 - 15 years] multiplied by 100.
2. Numerator of NER: Raised sum of all individuals aged 14 - 15 years who report currently attending matric level.
3. Denominator of NER: Raised sum of all individuals aged 14 - 15 years who respond to the relevant questions.

NOTES:
1. Net enrolment rate: [Number of children aged 13 - 14 years attending matric level (classes 9 - 10) divided by number of children aged 13 - 14 years] multiplied by 100.
2. Numerator of NER: Raised sum of all individuals aged 13 - 14 years who report currently attending matric level.
3. Denominator of NER: Raised sum of all individuals aged 13 - 14 years who respond to the relevant questions.

3. HEALTH

3.1 Introduction

The health profile of Pakistan is still not much encouraging. The overall mortality reduction of infants and children has been slow in the country. Awareness regarding nutritional needs, Pre and Post-natal care of mothers is also weak. The poor people of the country have very less knowledge about the diseases and illnesses and on the other hand they face extreme difficulty to have high cost private treatment as they have very few assets. As per the World Health Organization (WHO) definition the health in its broader sense "a state of complete physical, mental, and social well-being and not merely the absence of disease or infirmity." Therefore government and private sector needs to pay much attention to improve the overall quality of health facilities to all masses.

The Ministry of National Health Services Regulation and Coordination is a government agency responsible for Pakistan's health system. The Ministry of health was devolved to the provinces under the 18th Amendment. Besides the federal health department, each of the four provinces of Pakistan has their respective health departments and Secretariat, headed by the health minister. Respective Ministries are responsible to control, manage, administer medical services matters, also frame and enforce health policies in line with that promulgated by the federal health department.[1]

The following programs have been transferred to provincial health departments

- National Programme for Family Planning & Primary Health Care,
- Polio Eradication Program,
- National Maternal, Neonatal and Child Health (MNCH) Program, Expanded Program on Immunization and
- National Program for Prevention and Control of Hepatitis.

---

[1] Ministry of Health (Pakistan) /WHO apprehensive about Health Ministry's devolution.

Pakistan Social and Living Standard Measurement (PSLM) Survey data on Health is a good source to monitor the progress in Health sector which includes percentage of population who got Sick or Injured, Type of health consultation, Immunization, Diarrhoea and Pre and Post-natal care. It also gives detailed comparison between the data results from previous rounds. This chapter will present key indicators on Health at National/Provincial and District level to provide an opportunity to overview the progress and to assess the areas where serious and comprehensive efforts are required.

3.2 Sick or Injured

During the reference period of two weeks prior to the date of interview 6.4 percent of the population in 2014-15 reported sick or injured. Khyber Pakhtunkhwa (KP) with 9.1 percent has comparatively higher prevalence of sick or injured population as compared to Punjab with 5.9 percent, Sindh with 6.3 percent and Balochistan with 4.7 percent. In Islamabad (Federal Capital), reported number of cases fallen sick or injured is 4.4 percent. While observing the district level position, Toba Tek Singh and Bahawalpur with 9.7 percent, Thatta with 11.0 percent, Peshawar with 14.9 percent and Lasbela with 8.4 percent have the highest prevalence of sick and injured population among their

Figure 3.1 Percentage of Population Sick or Injured
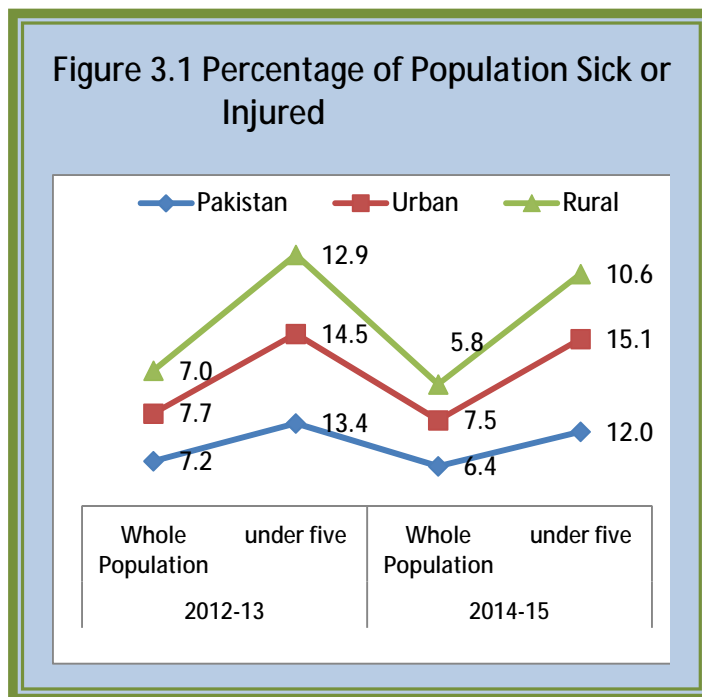

respective provinces. About 96 percent of sick and injured persons had some type of health consultation (Table 3.1). It is worth mentioning here that percentage of sick or injured for age less than 5 years is 12 percent in 2014-15 as compared to 13.4 percent in 2012-13, which shows higher tendency of being sick or injured for children than the elder ones (Table 3.2). Overall 70 percent of sick or injured persons consulted private dispensary/hospitals and 20 percent visited public dispensary/hospitals or RHC/BHU for their treatment (Table 3.3). Analyzing the type of

consultation among the districts, it is observed that almost every district in Punjab people prefer private dispensary/hospital for consultation, however in Sindh, KP & Balochistan the pattern varies among the districts.

3.3 Immunization

IMMUNIZATION is a method of making a person immune to disease by injecting certain substances into the body, which stimulate the production of disease-fighting antibodies. Immunization is mandatory for a healthy nation, it is considered as one of the most successful and cost effective health interventions. It has eradicated small pox, lowered the global incidence of polio and achieved dramatic reductions in illness, disability and death from DPT (Diphtheria, Pertussis (whooping cough), and Tetanus). It is a world-wide program being carried out in all countries assisted by WHO, UNICEF and by other donor agencies. The World Health Organization suggests that a child must receive a dose of BCG vaccination in order to get protected against tuberculosis, three doses of DPT to have protection against diphtheria, pertussis, and tetanus, three doses of polio vaccine and two doses of measles vaccination.

In the past, immunization for children comprises a series of vaccinations e.g., BCG (anti-TB); DPT, anti-polio (drops), given by mouth not by injection and Measles. A few years back, government has also introduced COMBO (1, 2, and 3) combination of DPT and Hepatitis. But from 2010 onwards government have introduced PENTA (Diphtheria, Pertussis, Tetanus, Hemophilus Influenza B and Hepatitis B); instead of COMBO and also Measles 2 is introduced along with routine BCG, anti-polio drops and measles. These all are administered at specific intervals as mentioned below:

IMMUNIZATION SCHEDULE

Age of Child	Previous Schedule	New Schedule
At birth	BCG (anti-TB); Polio drops	BCG (anti-TB) + Polio 0
6-weeks	DPT-I; Polio drops; Hepatitis-I	Pentavalent 1 + Polio 1
10 weeks	DPT-II; Polio drops; Hepatitis-II	Pentavalent 2 + Polio 2
14 weeks	DPT-III; Polio drops; Hepatitis-III	Pentavalent 3 + Polio 3
9 months	anti-measles vaccine	Measles 1
12-15 months		Measles 2

One of the primary objectives of the government in health sector is to expand the coverage of immunization and also issue vaccination cards to keep track of vaccinations given to the child. However, measuring immunization coverage is not an easy task; parents often do not have the children's immunization / health cards with information/record on vaccinations received. Immunization rates based only on the information given on immunization cards categorized as 'record' may therefore, underestimate coverage, however, it has the benefit of using written information recorded by health workers. The alternative is to ask parents about their child's vaccination history, and calculate coverage rates using this information termed as 'recall'. This runs the risk that parents will not remember vaccinations and will confuse different types of vaccines or other injections with vaccinations. However questions are asked in questionnaire in a way to filter out such cases and during training the enumerators are also briefed about probing techniques to get better and reliable information. In this report, both of these measures are calculated for all children of the age range 12 to 23 month.

Full immunization rates (all the 11 recommended vaccines) based on record increased to 60 percent in 2014-15 from 57 percent in 2012-13. Regarding the urban and rural comparison the immunization rates for urban areas has increased to 70 percent in 2014-15 as compared to 66 percent in 2012-13 and similar pattern is observed in rural areas 56 percent in 2014-15 as compared to 54 percent in 2012-13. Among provinces Punjab with 70 percent in 2014-15 has the highest percentage of children who are fully

Figure 3.2 Full Immunization
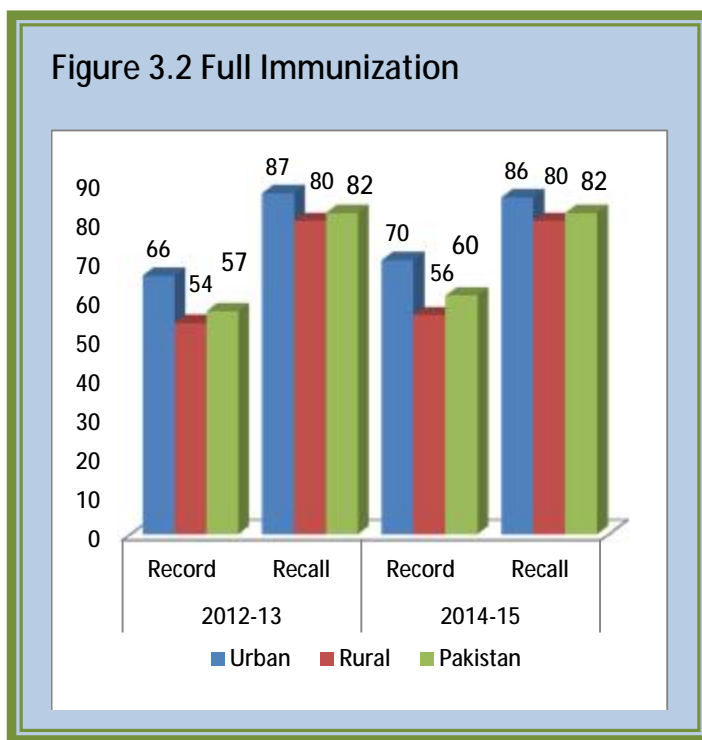

immunized based on record as compared to 65 percent in 2012-13 followed by KP with 58 percent in 2014-15 as compared to 53 percent in 2012-13, Sindh with 45 percent in 2014-15 as

compared to 42 percent in 2012-13 and Balochistan which has slightly declined to 27 percent in 2014-15 as compared to 29 percent in 2012-13 (Table 3.4 b).

Full immunization rates based on recall and record remains stagnant at 82 percent between 2014-15 & 2012-13. Islamabad also remains stagnant at 90 percent. While analyzing the district level pattern, Narowal with 99 percent, Matiari with 87 percent, Charsadda and Chitral with 98 percent and Awaran with 85 percent are the top ranked districts within their respective provinces. While D.G Khan with 75 percent, Tharparkar with 38 percent, Tor Garh with 3 percent and Chagai with 30 percent are the bottom ranked districts within their respective provinces (Table 3.4 c).

Table 3.5 (record Based) and Table 3.6 (based on record and recall) provides coverage by Antigen. Having a look at record based measure, the visible increase is seen in all antigens at provincial level as compared to 2012-13, however coverage of measles vaccination with 61 percent in 2014-15 as compared to 57 percent in 2012-13 is still very low as compared to other vaccinations. Rahim Yar khan in Punjab, Jacobabad in Sindh, Tor Garh in KP and Washuk in Balochistan have lowest coverage of all antigens with in their respective provinces. Measles coverage is highest in Punjab with 71 percent followed by KP with 58 percent, Sindh with 46 percent and Balochistan with 28 percent.

3.4 Diarrhoea

Diarrhoea is a condition that involves the frequent passing of loose or watery stools - it is the opposite of constipation and can have many causes, which may be infectious or non-infectious. Diarrhoea can kill anyone by dehydration, because diarrhoea is watery in nature, it takes up a lot of the water in your body. Diarrhoea can be dangerous in new born and infants. In small children, severe diarrhoea lasting just a day or two can lead to dehydration.

Diarrhoea disease is the second leading cause of death in children under five years old. Diarrhoea can last several days, and can leave the body without the water and salts that are necessary for survival. Most children who die from diarrhoea actually die from severe

dehydration and fluid loss[2]. Childhood diarrhoea has been a serious health problem in Pakistan. Both its prevention, through improved water and sanitation, and the treatment of dehydration through oral re-hydration salt (ORS) are goals of the government. Home management of diarrhoea through Oral Rehydration Salt (ORS) or a recommended home fluid (RHF) - can prevent many of these deaths.

Households were asked to report whether a child had diarrhoea in the 30 days prior to the survey. If child suffered from diarrhoea in last 30 days, series of questions were asked whether they have consulted someone for it or not and whether ORS has been given to child or not.

Overall percentage of children who have suffered from diarrhoea in the 30 days prior to survey is 9 percent in 2014-15 as compared to 10 percent in 2012-13. Highest percentage of diarrhoea cases were reported in Balochistan with 11 percent in 2014-15 as compared to 14 percent in 2012-13 and lowest cases were reported in Sindh with 6 percent in 2014-15 as compared to 9 percent in 2012-13. In Islamabad percentage of cases affected by diarrhoea is 5 percent. While observing the district level position Layyah with 26 percent, Naushahro Feroze with 12 percent, Peshawar with 16 percent, Kalat with 31 percent have the highest percentage of cases reported with diarrhoea in last 30 days within their respective provinces (Table 3.7).

Figure 3.3 Percentage of Diarrhoea cases in children
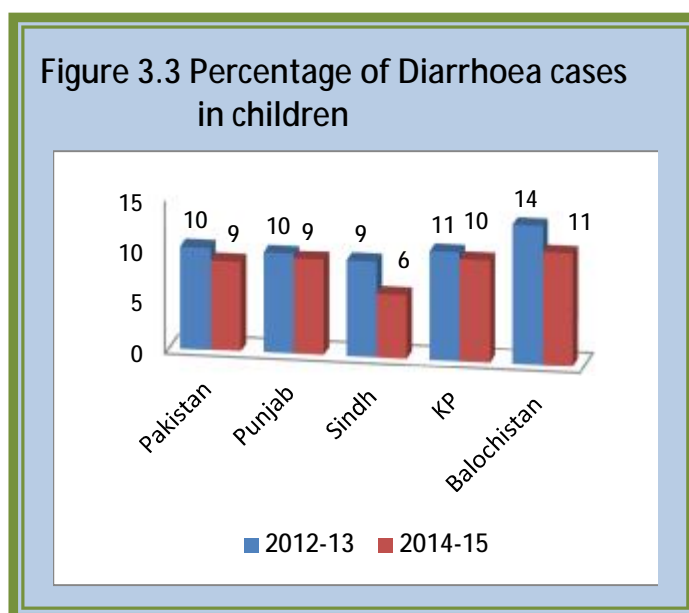

Among 94 percent of diarrhoea cases a practitioner of some kind was consulted. The use of ORS in diarrhoea cases has been decreased to 72 percent in 2014-15 from 75 percent in 2012-13. Use of ORS for treatment of diarrhoea is more prevalent in urban areas with 77 percent than in rural areas with 69 percent. ORS is mostly used in Balochistan with 90 percent followed by

---

[2] WHO Media center, Diarrhoea disease, Fact sheet No. 330

Sindh with 87 percent and KP with 81 percent, whereas in Punjab its only 63 percent. District level analysis reveals that Sheikhupura with 34 percent, Umerkot with 53 percent, Charsadda with 59 percent and Pishin with 29 percent have the lowest number of cases who reported use of ORS for treatment of diarrhoea (Table 3.8).

In cases of diarrhoea, the most consulted practitioner constitutes to be a private practitioner with 73 percent in 2014-15 as compared to 70 percent in 2012-13. Basic health units (BHU) and rural health centers (RHC) were consulted by only 5 percent of the cases in Pakistan, which gives some indication of the very limited use of the government primary health network for these kinds of curative services. In Balochistan 36 percent diarrhoea cases received consultation from government facilities such as hospitals, dispensaries, RHC, BHU and this trend is also prevalent in many districts of Sindh and KP especially in rural areas. Rawalpindi with 67 percent, Thatta with 76 percent, Chitral with 77 percent and Gwadar with 79 percent are the districts where highest numbers of cases used government hospital/RHC/BHU for treatment of diarrhoea (Table 3.9).

3.5 Pre and Post-natal Care

Maternal health is the serious issue in developing countries including Pakistan. To reduce the maternal mortality, the provision of quality pre-natal care can help to reduce the risk factors including pre-eclampsia, anemia, and sexually transmitted diseases. Pre-natal care also encourages women to learn the symptoms of pregnancy and delivery, to be immunized against tetanus, to know about infant care.

In overall Pakistan 73 percent of mothers who had given birth in the last three years went for pre-natal consultations during their last pregnancy in 2014-15 as compared to 69 percent in 2012-13. Pre-natal consultations have increased in urban as well as in rural areas, however they are higher in urban areas with 86 percent as compared to 67 percent in rural areas. Punjab has the highest consultation rate with 78 percent in 2014-15 as compared to 73 percent in 2012-13 and Balochistan has the lowest with 47 percent in 2014-15 as compared to 50 percent in 2012-13. In Islamabad, 95 percent women went for pre-natal consultation. While observing the district level position, Rawalpindi with 95 percent, Karachi with 96 percent, Haripur with 85 percent, Lasbela with 79 percent are the top ranked districts within their respective provinces. While Narowal

with 58 percent, Umer Kot with 42 percent, Tor Garh with 24 percent and Killa Abdullah with 21 percent are at the bottom within their respective provinces. It is observed that in majority of districts of Punjab and Sindh women are seeking consultation from private hospital/clinic while the trend is reverse in KP and Balochistan where women in majority of districts went to public hospitals for consultations. In Overall Pakistan, the three most commonly consulted sources were private hospital/clinic with 57 percent, government hospital/clinic with 31 percent followed by home LHW with 5 percent and home TBA with 4 percent each (Table 3.10).

Tetanus Toxoid injections are given to women during pregnancy to protect infants from neonatal tetanus, a major cause of infant death that is primarily due to unsanitary conditions during childbirth. In addition these injections protect women from developing tetanus themselves or suffering from sepsis. Two doses of tetanus Toxoid during pregnancy offer full protection. However, if a woman was vaccinated during a previous pregnancy, she may only need a booster dose to give full protection. Five doses are thought to provide lifetime protection. Overall 75 percent
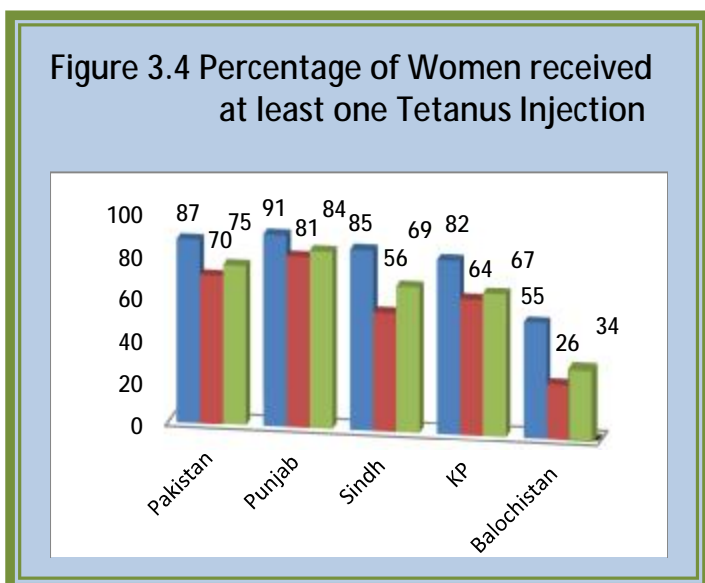

Figure 3.4 Percentage of Women received at least one Tetanus Injection

of mothers in 2014-15 as compared to 72 percent in 2012-13 had received a tetanus toxoid injection during their last pregnancy. Punjab is at top with 84 percent in 2014-15 as compared to 81 percent in 2012-13 and Balochistan is at bottom with 34 percent in 2014-15 as compared to 31 percent in 2012-13. In Islamabad, 94 percent women received tetanus toxoid injections. While observing the district level position Narowal with 98 percent, Karachi with 91 percent, Charsadda with 89 percent and Kalat with 80 percent are the top ranked districts within their respective provinces (Table 3.11).

In Pakistan most of the deliveries i.e. 55 percent took place at public or private hospital/clinics while 45 percent took place at home, however percentage of home deliveries are higher in rural areas with 55 percent as compared to urban areas with 24 percent only. District

wise analysis reveals that Rajanpur with 89 percent, Tharparkar with 85 percent, Tor Garh with 82 percent and Sheerani with 99 percent are the districts within their respective province where majority of deliveries took place at home.

Overall 58 percent deliveries were assisted by skilled[3] birth attendants as compared to 54 percent in 2012-13.Among them majority of the deliveries were performed by the doctors in all three provinces except Balochistan. Percentages of deliveries assisted by doctor in Punjab are 47 percent, Sindh 53 percent, KP 44 percent and Balochistan 23 percent. While analyzing district level position Lahore with 84, Karachi with 88 percent, Peshawar with 72 percent and Quetta with 57 percent are the top ranked districts within their respective provinces who have obtained the services of skilled birth attendants for delivery cases. On the other side Rajanpur with 11 percent, Tharparkar with 16 percent, Tor Gar with 18 percent and Sheerani with 2 percent are the bottom ranked districts with in their respective provinces (Table 3.12).

Figure 3.5 Person that assisted with delivery

Figure 3.6 Place Where Child was delivered

---
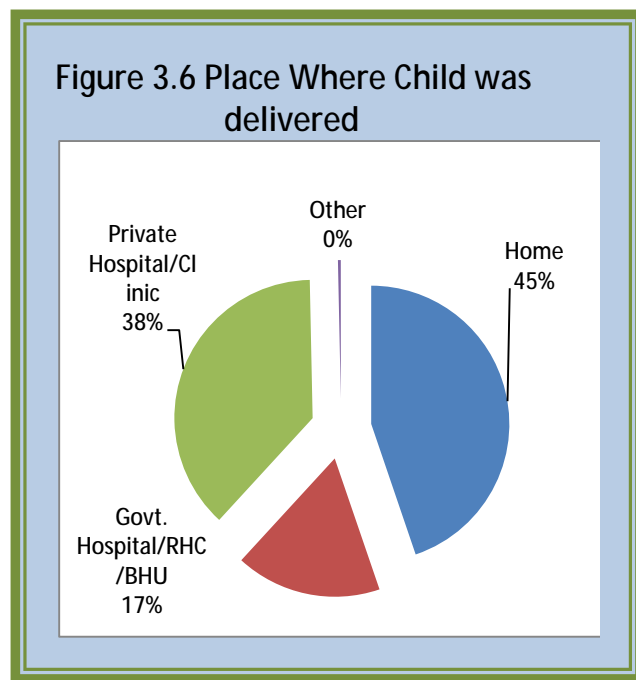

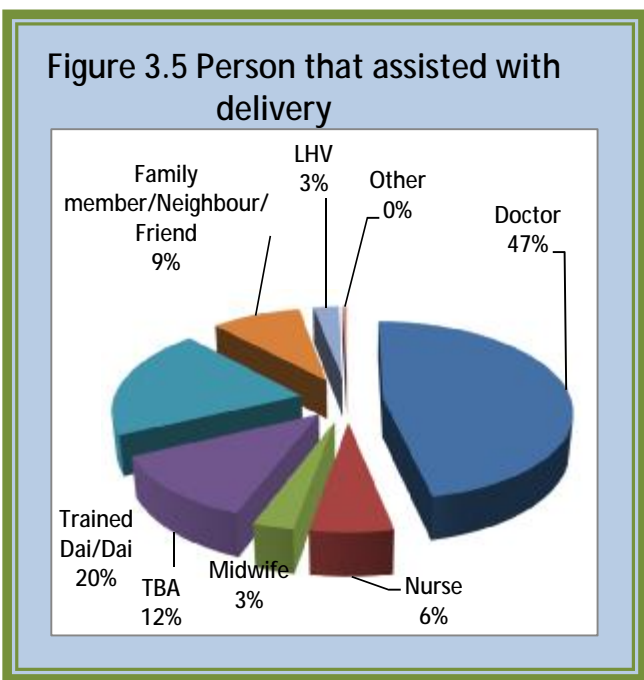

[3] Skilled birth attendant includes Doctor, Nurse, Mid Wife and LHV.

Post-natal consultation rates in 2014-15 as always are still much lower than the pre-natal rates as cited above. Post-natal consultation with 29 percent remains stagnant between 2014-15 & 2012-13. Post-natal consultation is higher in urban areas with 38 percent as compared to rural areas with 25 percent. In Islamabad, 74 percent women went for post-natal consultations. While observing the district level position, Sahiwal with

Figure 3.7 Post-Natal Consultations

47 percent, Hyderabad with 62 percent, Lower Dir with 41 percent and Barkhan with 40 percent are the top ranked districts for post-natal consultations within their respective provinces.
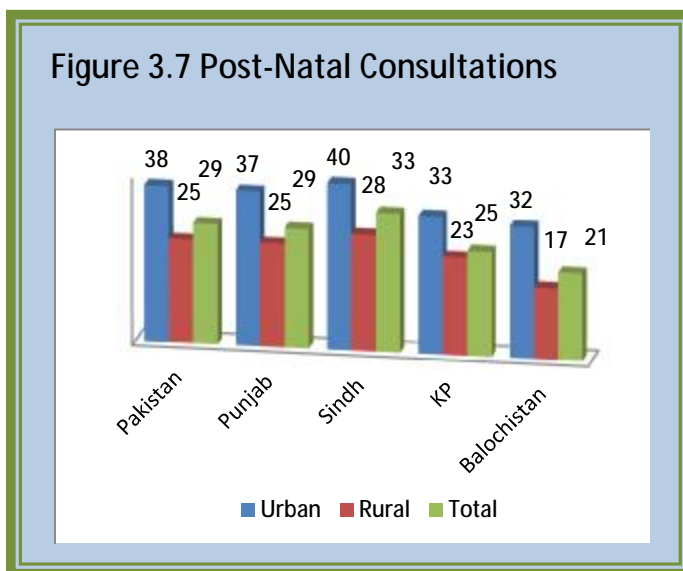

The most commonly cited sources of post-natal care in urban areas as well as rural areas were private hospital/clinic with 64 percent and 58 percent respectively followed by government hospital/clinic with 27 percent and 26 percent respectively in both urban areas and rural areas (Table 3.13).

NOTES:
1. Note that even the record-based measure cannot be based exclusively on vaccinations recorded on the health card, since it is not possible to identify the source of the information on each antigen. Instead, it is calculated for all children who had a health card, using all immunizations reported, whether or not these were recorded on the card. It is likely that most will have been recorded on the card.
2. Full immunization means that the child has received: BCG, DPT1, DPT2, DPT3, Polio1, Polio2, Polio3, H.B1, H.B2, H.B3 and

NOTES:

1. Note that even the record-based measure cannot be based exclusively on vaccinations recorded on the health card, since it is not possible to identify the source of the information on each antigen. Instead, it is calculated for all children who had a health card, using all immunizations reported, whether or not these were recorded on the card. It is likely that most will have been recorded on the card.

NOTES:
1.   Children who have suffered from diarrhoea in last 30 days prior to the date of interveiw are expressed a percentage of all children aged less than 5 years .
2. Diarrhoea in past 30 days : The survey 2012-13 contained a question addressed to the mothers of all the children aged less than 5 years where they were asked whether they had suffered from an episode of diarrhoea in the past 30 days.

NOTES:
1.Diarrhoea cases where a practitioner was consulted expressed as a percentage of all diarrhoea cases during past 30 days in children under 5 years.
2.Cases where a practitioner was consulted: For all the children that reported an episode of diarrhoea in the past 30 days the mothers were asked whether they consulted a practitioner for the ailment. The statistics reported here represent the   percentage of cases where a practitioner was consulted.

4. Housing, Water supply & Sanitation

4.1 Introduction

Provision of drinking water, adequate sanitation and personal hygiene are vital for the sustainable environmental conditions and human health. Not having access to water and sanitation is a courteous expression for a form of deprivation that threatens life, destroys opportunity and undermines human dignity. The inadequate quantity of improved drinking water along with poor quality of sanitation invites the variety of diseases i.e. diarrhoea, hepatitis and other stomach related disorders. Thus, investing in the provision of water supply and adequate sanitation is not only a development oriented strategy in itself, it can also yield other socio-economic benefits in terms of improved health status, quality of labour force and reduced burden-of-disease. Water and Sanitation is the neglected sector in Pakistan.

In Pakistan most of the households do not have access to adequate potable or shallow water. Similarly many households also lack toilets and adequate sanitation facilities, these poor people, mostly living in rural areas or urban slums .Sanitation is one of the basic necessities, which contributes to human dignity and quality of life and is an essential pre-requisite for success. This is an uphill task for government to provide clean and safe drinking water, especially the poorest of the poor need urgent attention. The Government of Pakistan, while recognizing that access to safe drinking water is the basic human right of every citizen and that it is the responsibility of the state to ensure its provision to all citizens, is committed to provide adequate quantity of safe drinking water to the entire population at an affordable cost and in an equitable, efficient and sustainable manner. The Ministry of Environment, in line with provisions of the National Environment Policy has formulated the National Drinking Water Policy 2009 through a countrywide consultation process which aims to increase public awareness about water safety, safe hygiene practices and water conservation.[1]

---

[1] National Drinking Water Policy 2009, Ministry of Environment, Government of Pakistan

In this chapter, information is presented on indicators such as Housing, Fuel used for lighting and cooking, main source of drinking water and type of toilet used by household. In housing it covers different types of dwelling ranging from huts to complex structures and fuel used for lightning & cooking includes gas, electricity, LPG, kerosene oil, wood and charcoal.

4.2 Housing

A house is a building that functions as a home for humans, including simple dwellings ranging from rudimentary huts of nomadic tribes and complex structures composed of many systems. Occupancy status wise houses are of different types like own, rent, free and subsidized rent.

In overall Pakistan the number of household that own dwelling units declined to 84 percent in 2014-15 as compared to 86 percent in 2012-13. The percentage is higher in rural areas, 90 percent as compared to 74 percent in urban areas. Provincial comparison reveals that percentage of household that own dwelling units is highest in Balochistan with 88 percent in 2014-15 as compared to 91 percent in 2012-13 followed by KP which remains stable at 87 percent, Punjab with to 85 percent in 2014-15 as compared to 87 percent in 2012-13, while Sindh with 81 percent in 2014-15 as compared to 82 percent in 2012-13 have the lowest percentage of household who live in own dwelling units (Table 4.1). In Islamabad (Federal Capital) 50 percent of households have their own housing units in 2014-15 as compared to 51 percent in 2012-13.Comparison of districts shows that; D.G khan with 96 percent, Tharparkar with 99 percent, Karak with 97 percent and Awaran with 100 percent are the districts where people predominantly live in their own housing units within their respective provinces. On the other hand, Rawalpindi with 68 percent, Karachi with 66 percent, Peshawar with 74 percent, and Quetta with 71 percent has the lowest percentage of households who own dwelling units within their respective provinces.

In overall Pakistan 10 percent households are living in rented and subsidize rented houses in 2014-15 as compared to 8 percent in 2012-13. Provincial level comparison shows that Sindh is at top with 13 percent in 2014-15 as compared to 12 percent in 2012-13 and Balochistan is at bottom with 7 percent in 2014-15 as compared to 6 percent in

2012-13. In Islamabad 41 percent households living in rented and subsidize rented houses. While comparing districts, Rawalpindi with 23 percent, Karachi with 28 percent, Peshawar with 24 percent and Quetta with 27 percent are top ranked districts living in rented and subsidize rented houses within their respective provinces.

Table 4.2 shows percentage distribution of households for material used for roof. In overall Pakistan Garder/T-iron with 39 percent in 2014-15 as compared to 37 percent in 2012-13 is predominantly used as material for roof construction. This percentage is higher in rural areas, 45 percent as compared to 28 percent in urban areas. The use of Garder/T-iron is highest in Punjab with 50 percent and lowest in KP with 13 percent. District comparison reveals that Bahawalpur with 85 percent, Dadu with 80 percent, Karak with 53 percent and Jaffarabad with 34 percent are top ranked districts using Garder/T-iron as material for roof construction within their respective provinces.

Figure 4.1: Material used for Roof
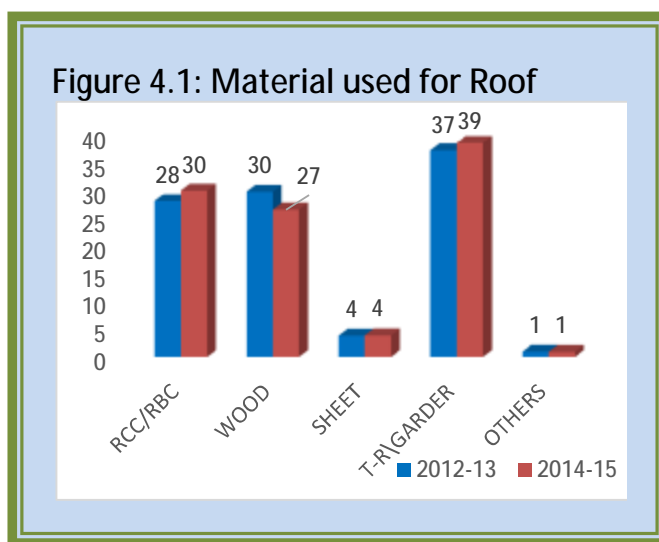

The second most used material in construction of roof is RCC/RBC with 30 percent in 2014-15 as compared to 28 percent 2012-13. This percentage is higher in urban areas, 57 percent as compared to 14 percent in rural areas. KP has highest percentage of households with 35 percent using RCC/RBC, while Balochistan has the lowest percentage with 7 percent. In Islamabad, 82 percent households used RCC/RBC for construction of roof. District wise comparison reveals that Lahore with 82 percent, Karachi with 76 percent, Swabi with 67 percent and Quetta with 24 percent are top ranked districts using RCC/RBC for construction of roof within their respective provinces.

The third most used material in construction of roof is Wood/Bamboo which has shown decline to 27 percent in 2014-15 from 30 percent in 2012-13. Balochistan has the highest percentage of households using Wood/Bamboo with 68 percent in 2014-15 as compared to 72 percent in 2012-13, while Punjab with 19 percent in 2014-15 as compared to 23 percent in 2012-13 have the lowest percentage of households using Wood/Bamboo in construction of roof (Table 4.2). In Islamabad only 1 percent, household used Wood/Bamboo for construction of roof. Analysing districts, it is observed that Hafizabad with

Figure 4.2: Material used for Wall
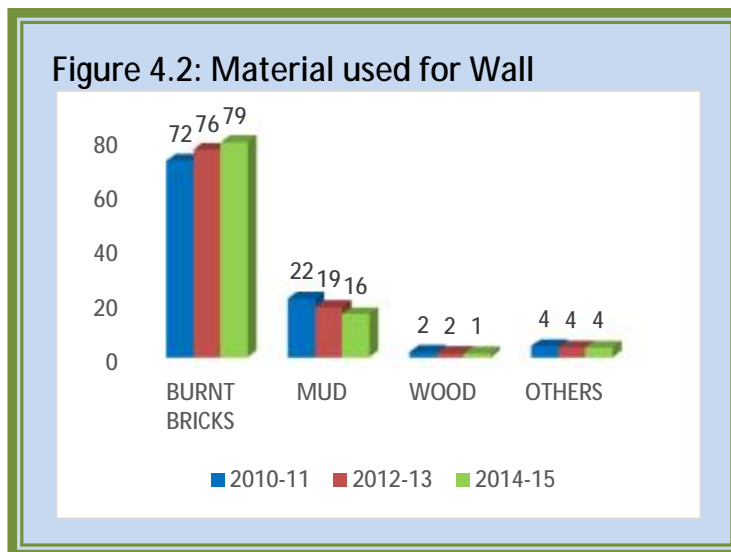

51 percent, Tharparkar with 83 percent, Tor Ghar with 92 percent and Barkhan with 96 percent are the top ranked districts within their respective provinces.

Table 4.3 shows percentage distribution of households for material used for the construction of walls. In overall Pakistan, Burnt bricks/Blocks have been used predominantly for construction of walls with 79 percent in 2014-15 as compared to 76 percent in 2012-13. This percentage is higher in urban areas, 96 percent as compared to 69 percent in rural areas. Provincial comparison shows that the use of Burnt Bricks/Blocks is highest in Punjab with 90 percent in 2014-15 as compared to 87 percent in 2012-13 followed by Sindh with 72 percent in 2014-15 as compared to 69 percent in 2012-13, KP with 61 percent in 2014-15 as compared to 57 percent in 2012-13 and Balochistan with 30 percent in 2014-15 as compared to 28 percent in 2012-13. In Islamabad, 99 percent households use Burnt Bricks/Blocks as material for construction of walls. While comparing districts, Sialkot and Lahore with 100 percent, Karachi with 99 percent, Nowshera with 93 percent and Quetta with 68 percent are the top ranked districts using Burnt bricks/Blocks for construction of walls in their respective provinces. D.G

Khan with 56 percent, Tharparkar with 26 percent, Tor Ghar with 2 percent and Harnai with 5 percent are the bottom ranked districts in respect of Burnt bricks/Blocks for construction of walls within their respective provinces.

Housing units by number of rooms (Table 4.4) shows that majority of the households in Pakistan live in housing units with 2-4 rooms, however, there is a marginal decline in housing units with 2-4 rooms, from 68 percent in 2012-13 to 67 percent in 2014-15, while houses with five or more rooms remain stagnant at 6 percent during the same period. Similar pattern is prevalent while observing the provinces, Balochistan have the highest percentage i.e. 77 percent household with 2-4 rooms, while Sindh has lowest percentage i.e. 62 percent household with 2-4 rooms in 2014-15. It is observed that, 28 percent of households in overall Pakistan have 1 room. District comparison reveals that Kasur with 42 percent, Tharparkar with 16 percent, Upper Dir with 24 percent and Sheerani with 52 percent have highest percentage of households with 1 room within their respective provinces.

4.3 Sources of Drinking Water

In PSLM Survey, questions are asked to know the main source of drinking water. According to this, information is collected about tap water, motorised pumping, hand pump, dug well and others. The category "others" include tanker, mineral water, filtration plant and sea/river/pond/stream. Tap water is a delivery system where the water is delivered through a network of pipes and the water is treated before it is supplied. In urban areas generally water comes in to house through pipes and is stored in tanks, built in the house. Then the water for the use of household is lifted to small tanks built at the top of the house, such system should be recorded as tap water supply. Hand Pump is a pump operated manually to draw water from a bored hole. Sometimes hand pump and motor are operated at the same hole. Dug well is of two types opened and closed well closed well. The closed dug well is a covered and opened well is a dug well without any covering.

In overall Pakistan 27 percent of households are using tap water as main source of drinking water in 2014-15 as compared to 30 percent in 2012-13. It is observed that there is shift from tap water to motorized pumping for last few years as it increased to 33 percent in 2014-15 as compared to 30 percent in 2012-13. The third main source is hand pump with 26 percent in 2014-15 as compared to 27 percent in 2012-13 (Table 4.5). It is observed that main source of drinking water in urban areas is tap water with 51 percent and hand pump in rural areas with 38 percent. Provincial level comparison shows that number of households using tap water as a main source of drinking water is highest in Sindh with 41 percent in 2014-15 as compared to 43 percent followed by KP with 35 percent in 2014-15 as compared to 44

Figure 4.3: Main Source of Drinking Water
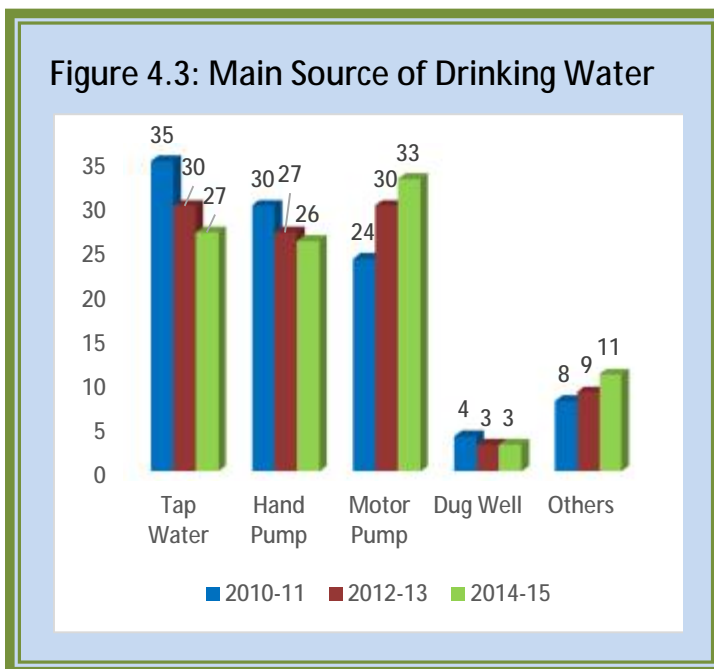

percent in 2012-13, Balochistan with 33 percent as compared to 34 percent in 2012-13 and Punjab with 18 percent in 2014-15 as compared to 22 percent 2012-13. In Islamabad, only 20 percent household are using tap water as main source of drinking water as compared to 54 percent in 2012-13, this change is due to shifting in motorized pumping and filtration plant. While comparing districts, Lahore with 60 percent, Karachi with 84 percent, Chitral with 74 percent and Quetta with 70 percent are the top ranked districts for using tap water as main source of drinking water within their respective provinces. On the other hand Muzaffargarh with 1 percent, Larkana and Shikarpur with 1 percent, Swabi with 4 percent and Jhal Magsi and Washuk with 3 percent household are the bottom ranked districts within respective provinces.

4.4 Sanitation

The term sanitation, however, extends to cover cleanliness, hygiene, proper collection of liquid and solid wastes and their environmentally proper disposal. In this endeavor, the needs for waste reduction, reuse, recycle and change in the attitude towards consumption and production patterns are other imperatives for achieving goals of sustainable environment**.** For this purpose the globally used best practices should be adopted in order to reuse and recycle the waste material. The main goal of National Sanitation Policy is to provide adequate coverage for improving the quality of life of the people of Pakistan and to provide physical environment necessary for healthy life[2]

4.4.1 Toilets

Sanitation is also an important indicator of MDG. Toilet is a fixture for defecation and urination, consisting of a bowl fitted with a hinged seat and connected to a waste pipe and a flushing apparatus. In the questionnaire response was recorded regarding the type of toilet used by the household. A toilet, which is used by the household and is situated in the yard, is considered as a toilet within the household.

Overall in Pakistan 73 percent of households are using flush toilet facilities in 2014-15 as compared to 71 percent in 2012-13. Percentage of households using flush toilet is higher in urban areas with 97 percent as compared to 60 percent in rural areas. Provincial level comparison shows that the highest number of household in Punjab with 79 percent in 2014-15 are using flush toilet as compared to 77 percent in 2012-13 followed by KP with 76 percent in 2014-15 as compared to 71 percent in 2012-13, Sindh with 67 percent in 2014-15 as compared to 63 Percent in 2012-13 and Balochistan with 31 percent in 2014-15 as compared to 30 percent in 2012-13 have the lowest percentage of households using flush facility (Table 4.6). In Islamabad, 99 percent households are using flush toilet facility. While observing district level pattern, Lahore with 99 percent, Karachi with 97 percent, Haripur with 90 percent and Quetta with 76 percent are the top ranked districts in their respective provinces.

---

[2] National Sanitation Policy, Government of the Islamic Republic of Pakistan ,Ministry of Environment

In overall Pakistan 13 percent households are using non flush facility as compared to 14 percent households in 2012-13.Non flush category includes, a soak pit is a "katcha" structure, which is closed, once it is filled up. It is designed so that water disappears into the ground, dry raised latrine No flush a "khuddi" is used and the waste matter is taken away by a sweeper/jamadar and pit latrine a hole is dug in the ground, connected to a pit in which the waste matter is accumulated. The hole is closed once the pit is filled up.

Figure 4.4: Toilet Facility
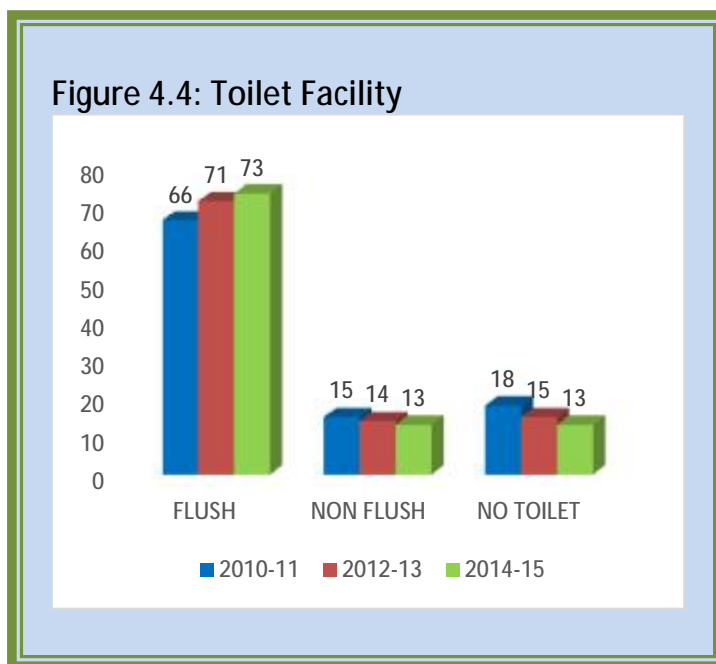

Overall there are only 13 percent household in 2014-15 that do not have toilet facility as compared to 15 percent in 2012-13 (Table 4.6). This varies greatly between urban and rural areas, 1 percent of urban households have reported no toilet facility as compared to 21 percent of rural household. Provincial level comparison shows that Punjab has the highest percentage of households reporting no toilet with 16 percent in 2014-15 as compared to 15 percent in 2012-13 followed by Balochistan with 13 percent in 2014-15 as compared to 15 percent in 2012-13, KP with 12 percent in 2014-15 as compared to 13 percent in 2012-13, while Sindh with 7 percent as compared 8 percent in 2012-13. While observing district level pattern, Chiniot and Jhang with 40 percent Tharparkar with 44 percent, Tor Ghar with 49 percent and Loralai with 49 percent are the districts with the highest percentage of households without any toilet facility in their respective provinces.

4.5 Electricity & Gas

In PSLM survey information is collected from households about the major source used for lighting. For this purpose following categories are included, Electricity, Gas/Kerosene oil, Wood/ Candles and Others.

Table 4.7 shows that 93 percent of households are using electricity as fuel for lightning which remains stagnant during the period 2012-13 and 2014-15. This percentage is higher in urban areas with 99 percent as compared to 90 percent in rural areas. Provincial comparison shows that use of electricity as a source of lighting is highest in KP with 96 percent in 2014-15 as compared to 94 Percent in 2012-13 followed by Punjab at 95 percent which remains stagnant during the period 2012-13 to 2014-15, Sindh with 91 percent which remains stable during the period 2012-13 to 2014-15 and Balochistan with 81 percent in 2014-15 as compared to 79 percent in 2012-13. In Islamabad, 98 percent households are using electricity as a source of lighting. While comparing districts, Gujrat and Mandi Bahuddin with 100 percent, Hyderabad and Dadu with 99 percent, Bannu, Chitral and Charsadda with 100 percent and Jaffarabad with 98 percent are the top ranked districts within their respective provinces. Whereas, districts D.G Khan with 82 percent, Tharparkar with 39 percent, Tor Ghar with 68 percent and Chagai with 27 percent are the bottom ranked districts in respect of use of electricity as main source of lightning within their respective provinces.

Similarly in PSLM Survey, information is collected from households about the major fuel used for cooking. Different sources of fuel used for cooking have been discussed like Gas, Kerosiene Oil, Wood/Sticks and others (dung cake and crop residue, electricity and charcoal are included in the others category). It is worth mentioning here that the category electricity was included as separate category in year 2012-13 but due to its insignificant values as fuel for cooking ,from the year 2014-15, it will be included in others, and Gas & Oil are reported as separate categories, so the table is not comparable with 2012-13.

Table 4.8 indicates that the vast majority of households i.e. 51 percent are using Wood/Sticks as fuel for cooking in overall Pakistan. This percentage is higher in rural areas, 73 percent as compared to only 13 percent in urban areas. Provincial level comparison shows that 73 percent household in Balochistan and KP are using Wood/Sticks as main fuel for cooking in 2014-15, followed by Punjab with 51 percent and Sindh with 38 percent. District comparisons reveals that Rajanpur with 98 percent, Tharparkar with 99 percent, Upper Dir with 100 percent and Musa Khel with 100 percent have the highest percentage of household using Wood/Sticks as main fuel for cooking.

41 percent of households are using gas as fuel for cooking. This percentage is higher in urban areas with 85 percent as compared to 16 percent in rural areas. Provincial level comparison reveals that 56 percent household in Sindh followed by 39 percent in Punjab, 26 percent in KP and 25 percent households in Balochistan are using gas as main source of fuel for cooking. In Islamabad, 87 percent household are using gas as a fuel for cooking. While comparing districts, Lahore with 92 percent, Karachi with 98 percent, Peshawar with 73 percent and Quetta with 87 percent are the top ranked districts for using gas as main fuel for cooking within their respective provinces.

NOTES:

1.   The Panjgur and Kech districts has been dropped from the scope of the survey due to law and order situation.
2.   From the year 2014-15 Wood is also included with Candle as source of lightning.
3.   Total may not add to 100 because of rounding.

NOTES:
1. The Panjgur and Kech districts has been dropped from the scope of the survey due to law and order situation.
2. Catagory, Others Include Dung Cake, Electricity, Charcoal and Others.
3. Total may not add to 100 because of rounding.

5. Household Perception of Economic Situation and Satisfaction by Facilities and Service Use.

5.1 Introduction

Government is giving special emphasis to improve the economic situation of people by providing different types of facilities/services, it is very important for the government to have an overview of how the people of the country living in various districts perceive their wellbeing against the different facilities provided by the government. This will help the government with necessary information about the priority sectors to properly address the multifaceted problems and the areas of concern associated with these sectors. Accordingly the respondents of the survey were asked to give their perception of their economic situation as well as community improvement and how effectively services/ facilities were provided to them.

5.2 Perception of Economic Situation

Households were asked to compare their economic situation with last year. (Table 5.1) In response to this question, 44 percent in 2014-15 reported no change as compared to 43 percent in 2012-13, 37 percent reported worse or much worse, which remains stagnant between 2014-15 and 2012-13 and 19 percent reported better or much better in 2014-15 as compared to 20 percent in 2012-13. In Islamabad the households who reported worse and much worse situation remains stagnant at 24 percent during the period 2014-15 and 2012-13. District level position shows that Bahawalpur with 53 percent, Umerkot and Mirpur Khas with 57 percent,

Figure 5.1: Economic Situation of Household

Kohistan with 50 percent Chagai with 63 percent have highest proportion of household who have replied that economic situation is worse or much worse within their respective provinces. However, when asked to compare the economic situation of the community where they live, Percentage of households who reported worse or much worse in 2014-15 has increased to 21 percent from 19 percent in 2012-13, while 62 percent reported no change in 2014-15, as

Figure 5.2: Economic Situation of Community

compared to 60 percent in 2012-13 and 13 percent reported better or much better in 2014-15 as compare 16 percent in 2012-13(Table 5.2).

5.3 Satisfaction by Facilities and Service Use

Households were also asked to give opinion about their satisfaction of the use of Facilities / Services provided by the government (Table 5.3), the denominator includes only those household who are using the facility. It is observed that overall satisfaction of the services used is increased for all facilities, 57 percent of the household were satisfied from Government Basic health facility in 2014-15 as compared to 53 percent in 2012-13, 83 percent of the household were satisfied with the Family Planning Service as compared to 76 percent in 2012-13, 94 percent

Figure 5.3: Satisfaction by Facilities and Services use

household were satisfied with Schools as compared to 93 percent in 2012-13, 71 percent of household were satisfied with Veterinary Services as compared to 62 percent in 2012-13, 69 percent of household with Agriculture Extension as compared to 62 percent in 2012-13 and Satisfaction with Police service remains stagnant at 48 percent during the period.

It is observed that in Punjab satisfaction increased in almost all services but satisfaction from Police remains stagnant. In Sindh Satisfaction from services of Family Planning, Veterinary and Agriculture increased but there is decline in satisfaction from services of Basic Health Unit & Police. In KP there is increase in satisfaction in all services but there is marginal decline in satisfaction from School services. In Balochistan there is increase in satisfaction from services like Family Planning, School, Veterinary and Agriculture, while satisfaction from services of BHU marginally declined and satisfaction from services of police remain stagnant.

NOTES:

1. The Panjgur and Kech districts has been dropped from the scope of the survey due to law and order situation.
2. Denominator includes only those households who are using the facility.

455

APPENDIX A: TECHNICAL NOTES

TECHNICAL NOTES PART A

DEFINITIONS OF SOME KEY INDICATORS

PRIMARY GROSS ENROLMENT RATIO:-
Number of children attending primary level (classes 1-5) divided by number of children aged 5-9 years multiplied by 100. Enrolment in Katchi is excluded.

PRIMARY NET ENROLMENT RATE:-
Number of children attending primary level (classes 1-5) aged 5-9 years divided by children aged 5-9 years multiplied by 100. Enrolment in Katchi is excluded.

MIDDLE GROSS ENROLMENT RATIO:-
Number of children attending middle level (classes 6-8) divided by number of children aged 10-12 years multiplied by 100.

MIDDLE NET ENROLMENT RATE:-
Number of children aged 10-12 years attending middle level (classes 6-8) divided by number of children aged 10-12 years multiplied by 100.

MATRIC GROSS ENROLMENT RATIO:-
Number of children attending matric level (classes 9-10) divided by number of children aged 13-14 years multiplied by 100.

MATRIC NET ENROLMENT RATE:-
Number of children aged 13-14 years attending matric level (classes 9-10) divided by number of children aged 13-14 years multiplied by 100.

LITERACY RATE:-
Population aged 10 years and older that can read and write with understanding expressed as percentage of total population aged 10 years and older.

GENDER PARITY INDEX:-
The GPI at primary or secondary is defined as net enrolment rate of females at primary or secondary level divided by net enrolment rate of males in primary or secondary level.

YOUTH GENDER PARITY INDEX:
Youth literacy GPI is defined as persons who are 15-24 years old and literate divided by total number of persons 15-24 years old.

BASED ON RECALL-ATLEAST ONE IMMUNISATION:-
Children aged 12-23 months reported as having received at least one immunisation expressed as percentage of all children aged 12-23 months.

BASED ON RECORD –FULLY IMMUNIZED:-
Children aged 12-23 months who reported having received full immunisation who also have an immunisation card, expressed as a percentage of all children aged 12-23 months. To be classified as fully immunised a child must have received: 'BCG', DPT1, DPT2, DPT3, polio1, polio2, polio3 and Measles.

DIARRHOEA:-
Children less than 5 years who suffered from diarrhoea in the last 30 days expressed as percentage of all children aged less than 5 years.

PRE-NATAL:-
Ever married women aged 15 – 49 years who had given birth in the last three years and who had attended at least one pre-natal consultation during the last pregnancy, expressed as a percentage of all ever married women aged 15 – 49 years who had given birth in the last three years.

POST-NATAL:-
Post-natal is the period beginning immediately after the birth of a child and extending for about six weeks. Ever married women aged 15-49 years who received post-natal check-up expressed as a percentage of all ever married women aged 15-49 years who had a birth in the last three years.

TETANUS TOXOID INJECTIONS:-
Currently married women aged 15-49 years who had a birth in the last three years and received a tetanus toxoid injection during the last pregnancy, expressed as a percentage of all currently married women aged 15-49 years who had a birth in the last three years.

TECHNICAL NOTES PART B

ESTIMATION PROCEDURE ADOPTED FOR PSLM SURVEY

NOTATIONS:

N_h = Total number of Primary Sampling Units (PSUs) in the hth stratum of a province.

n_h = Total number of sample PSUs in the hth stratum of a province.

M_{hi} = Total number of Secondary Sampling Units (SSUs) in the ith sample PSU of hth stratum of a province.

m_{hi} = Number of sample SSUs in the ith sample PSU of hth stratum of a province.

P_{hi} = Assigned probability of selection of ith PSU of the hth stratum of a province.

y_{hij} = Value of any characteristic y of jth SSU within ith PSU of hth stratum of a province.

x_{hij} = Value of any characteristic x of jth SSU within ith PSU of hth stratum of a province with whose respect proportion is required.

(i): ESTIMATION FORMULAE FOR TOTALS AND THEIR VARIANCES

$$N = \sum_{h=1}^{L} N_h$$

$$n = \sum_{h=1}^{L} n_h$$

$$\hat{Y}_h = \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{\hat{Y}_{hi}}{p_{hi}}$$

OR

$$\hat{Y}_h = \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{1}{p_{hi}} \frac{M_{hi}}{m_{hi}} \sum_{j=1}^{m_{hi}} y_{hij}$$

$$\hat{Y} = \sum_{h=1}^{L} \hat{Y}_h = \sum_{h=1}^{L} \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{\hat{Y}_{hi}}{p_{hi}}$$

For X, another variable of interest, we have

$$\hat{\bar{X}}_h = \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{\hat{X}_{hi}}{P_{hi}} = \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{1}{P_{hi}} \frac{M_{hi}}{m_{hi}} \sum_{j=1}^{m_{hi}} x_{hij}$$

$$\hat{\bar{X}} = \sum_{h=1}^{L} \hat{\bar{X}}_h = \sum_{h=1}^{L} \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{\hat{X}_{hi}}{p_{hi}}$$

$$\hat{R} = \frac{\hat{Y}}{\hat{X}}$$

$$v(\hat{Y}_h) = \frac{1}{n_h} s^2{}_{ht} = \frac{1}{n_h(n_h-1)} \left(\sum_{i=1}^{n_h} \frac{\hat{Y}^2{}_{hi}}{P^2{}_{hi}} - \frac{\left(\sum_{i=1}^{n_h} \frac{\hat{Y}_{hi}}{P_{hi}}\right)^2}{n_h} \right)$$

$$v(\hat{Y}) = \sum_{h=1}^{L} \frac{1}{n_h} s^2{}_{ht} = \sum_{h=1}^{L} \frac{1}{n_h(n_h-1)} \left(\sum_{i=1}^{n_h} \frac{\hat{Y}^2{}_{hi}}{P^2{}_{hi}} - \frac{\left(\sum_{i=1}^{n_h} \frac{\hat{Y}_{hi}}{P_{hi}}\right)^2}{n_h} \right)$$

(ii): FORMULA FOR RATIO ESTIMATES

$$r = \frac{\hat{Y}}{\hat{X}}$$

Where Y^ and X^ can be estimated by equations under item (i) given above.

$$Rel\ V(r) = \frac{1}{\hat{Y}^2} \sum_{h=1}^{L} \frac{1}{n_h} s^2{}_{hb} + \frac{1}{\hat{Y}^2} \sum_{h=1}^{L} \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{M^2{}_{hi}}{p^2{}_{hi} m_{hi}} \frac{(M_{hi} - m_{hi})}{M_{hi}} s^2{}_{hw}$$

Where
s²hb = s²ht - s²hw

$$s^2{}_{ht} = s^2{}_{hy} + r^2 s^2{}_{hx} - 2r\ s_{hxy}$$

$$s^2{}_{hx} = \frac{1}{(n_h - 1)} \left[\sum_{i=1}^{n_h} \frac{\hat{x}^2{}_{hi}}{p^2{}_{hi}} - \frac{\left(\sum_{i=1}^{n_h} \frac{\hat{x}_{hi}}{p_{hi}} \right)^2}{n_h} \right]$$

$$s_{hxy} = \frac{1}{n_h - 1}\left[\sum_{i=1}^{n_h}\left(\frac{\hat{x}_{hi}}{p_{hi}}\frac{\hat{y}_{hi}}{p_{hi}}\right) - \frac{\left(\sum_{i=1}^{n_h}\frac{\hat{x}_{hi}}{P_{hi}}\right)\left(\sum_{i=1}^{n_h}\frac{\hat{y}_{hi}}{P_{hi}}\right)}{n_h}\right]$$

$$s^2_{hy} = \frac{1}{(n_h - 1)}\left[\sum_{i=1}^{n_h}\frac{\hat{y}^2_{hi}}{p^2_{hi}} - \frac{\left(\sum_{i=1}^{n_h}\frac{\hat{y}_{hi}}{p_{hi}}\right)^2}{n_h}\right]$$

$$s^2_{hw} = \frac{1}{n_h - 1}\sum_{i=1}^{n_h}\frac{1}{p^2_{hi}}\frac{M^2_{hi}}{m_{hi}}\frac{(M_{hi} - m_{hi})}{M_{hi}}s^2_{hi}$$

And

$$s^2_{hi} = s^2_{hiy} + r^2 s^2_{hix} - 2r\, s_{hixy}$$

$$s^2{}_{hiy} = \frac{1}{(m_{hi} - 1)} \left[\sum_{j=1}^{m_{hi}} y^2{}_{hij} - \frac{\left(\sum_{j=1}^{m_{hi}} y_{hij} \right)^2}{m_{hi}} \right]$$

$$s^2{}_{hix} = \frac{1}{(m_{hi} - 1)} \left[\sum_{j=1}^{m_{hi}} x^2{}_{hij} - \frac{\left(\sum_{j=1}^{m_{hi}} x_{hij} \right)^2}{m_{hi}} \right]$$

$$s^2{}_{hixy} = \frac{1}{(m_{hi} - 1)} \left[\sum_{j=1}^{m_{hi}} x_{hij}\, y_{hij} - \frac{\left(\sum_{j=1}^{m_{hi}} x_{hij} \sum_{j=1}^{m_{hi}} y_{hij} \right)}{m_{hi}} \right]$$
