Pakistan Social and Living Standards Measurements (PSLM), 2019-20 is the twelveth round of a series of surveys, initiated in 2004. Current round of PSLM District level survey covered 5,893 blocks & 176,790 households and provide district level indicators on Education, Health, Housing, Water Sanitation & Hygiene, Information Communication & Technology (ICT), Food Insecurity Experience Scale (FIES). The additional significance of PSLM District level survey (2019-20) is inclusion of the modules on Functional Limitation (**Disability) and life time Migration for the first time to monitor some of the most important indicators for SDGs.** PSLM section and Data Processing Centre took the initiative of shifting the data collection from laborious method i.e. from paper based questionnaires to the Tablets. For this purpose Android Software for PSLM District level survey was developed by the Data Processing Center in vigorous consultation with the PSLM section under the sample guidance of Member Support Services for timely data collection and to ensure quality.

The Field activities of the twelveth round of PSLM Surveys were carried out during October, 2019 to March, 2020. This report provides information on key socio economic indicators, whereas the main PSLM District report provides detail information of each indicator at national, provincial as well as at district level with urban /rural breakdown.

I would like to congratulate Mr. Muhammad Sarwar Gondal, Member (Support Services/RM), Mr. Ayazuddin Member (Census and Survey) and the whole PBS team for the successful completion of the task. The report is also available on the website of PBS www.pbs.gov.pk. Comments and suggestions are welcome to further improve the survey and this report in future.

(Hamed Yaqoob Sheikh)
Secretary/Chief Statistician

Government of Pakistan
Ministry of Planning Development & Special Initiatives
Pakistan Bureau of Statistics,
Islamabad
May, 2021

PBS being National Statistical office is mandated for collection & compilation of data with transparency & timeliness and its dissemination for evidence based policy making /informed decision making on all social & Economic issues. Data collected by PBS is widely used by Policy makers, National /International agencies, academia, researchers & students. The year 2019 was the ***Year of Change*** for PBS as, keeping in view the Government's vision of "**Digital Pakistan, PBS** has also undergone **"Digital Transformation"** and not only shifted from manual approach to electronic data collection with built-in monitoring systems linked with GIS for reliable, timely and credible data for its major activities but also have paradigm shift on data dissemination from unidimensional mode to interactive customized Dash Boards and Decision Support Systems which provides open access to data with infographics along with time series data for informed decision making and effective management.

PSLM District Level Survey 2019-20 is the flagship survey of PBS designed to cover 195000 households all over country to provide district level estimates in key social sectors along with provision of data for monitoring of **21 SDG indicators.** For the first time in history of PBS, PSLM data has been collected electronically through tablets using android based software exclusively designed by Support services wing of PBS with Enterprise Resource Planning(ERP) solutions for bringing transparency in the process and provision of timely and credible data The successful completion of this survey is only become possible due to cohesive & dedicated efforts of officials of PSLM, Support Services, Field Services, Sample Design, GIS sections and the tireless work of the field teams of PBS.

The survey provides detail insights on the key human development & living standards indicators at district level for monitoring of development plans and resource allocation. The key highlight of report is situation analysis of districts with in provinces based on Education, Health, living Standards and ICT with GIS mapping. It depicts the clear picture and evidence for devising mechanism for resources allocation at district level. For the convenience of data users & planners a customized dash board has been prepared for providing data in interactive way along with time series trends which can be accessed at www.sdgs.pbos.gov.pk. I hope the results of this survey will be highly beneficial for Federal / provincial planners for data driven decision making& monitoring progress of development Plans. Comments & suggestions are highly appreciated for improvement of working of PBS

(Muhammad Sarwar Gondal)
Member (Support Services/RM)

Government of Pakistan
Ministry of Planning Development & Special Initiatives
Pakistan Bureau of Statistics,
Islamabad
May, 2021

This is the Seventh report of District Level Survey which is being conducted under PSLM project since 2004 to 2015. It provides information at National/ Provincial/District level with urban/ rural breakdown. This Survey has been designed to collect the data from 195000 household based on 6500 urban & rural Primary sampling units (PSUs). The period of field enumeration of PSLM 2019-20 was from October 2019 to March 2020.

I would like to thank Ms. Rabia Awan Director PSLM for her leadership and guidance for taking initiative for introduction of electronic data collection based on android linked with GIS monitoring, for the first time in the history of PBS and inclusion of modules of Disability and Migration in the PSLM survey successfully. The completion of the report would have not been possible without enormous hard work and devotion of PSLM Technical team including Statistical Officers Mr. Saqib Sultan Khawar, Ms. Sana Habib and Ms. Hina Kanwal and their supporting staff. Data Processing Centre, PSLM Field teams and Sample Design Section of the Pakistan Bureau of Statistics (PBS) provided full support for completion of gigantic task. The completion of the survey activity and preparation of the report in a limited time has further added pride to the Pakistan Bureau of Statistics.

Considering the requirements of the policy makers, planners, researchers and other data users, efforts have been made to improve the report in a way that it can meet the expectations. Report along with micro data is also placed at PBS website www.pbs.gov.pk and main results are also available on exclusively designed customized dashboard. It is hoped that the data users will find this report useful and timely. Any further comments and suggestions for future improvement will be highly appreciated.

LIST OF OFFICERS 2019-20

The PSLM District Level report is produced by the efforts of the following officers/officials of Pakistan Bureau of Statistics listed under the specific tasks:

Planning, Execution Of Survey and Finalization of Report: -	
Mr. Muhammad Sarwar Gondal	Member (Support Services/RM)
Mr. Ayazuddin	Member (Census & Survey)
Ms. Rabia Awan	Director
Mr. Tariq Mustafa Awan	Statistical Officer
Ms. Sana Habib Chaudhary	Statistical Officer
Ms. Hina Kanwal	Statistical Officer
Mr. Saqib Sultan Khawar	Statistical Officer
ASSISTED BY	
Ms. Rabail Azeem	Statistical Assistant
Ms. Nadia Iqbal	Statistical Assistant
Ms. Sadaf Toqeer	Statistical Assistant
Mr. Muhammad Ali	Statistical Assistant
MANAGEMENT TEAM	
Ms. Kulsoom Fatima	Statistical Assistant
Mr. Khalid Rafique	Statistical Assistant
Muhammad Irfan Khan	Statistical Assistant
SUPPORT SERVICES TEAM	
Mr. Azizullah Bhatti	Director
Mr. Saad Ullah Khan	Chief System Analyst
Mr. Tahir Mahmood	Data Processing officer
Mr. Muhammad Zubair	Data Processing officer
Mr. Asif Usman Khattak	Data Processing officer
Mr. Saddam Hussain	Data Processing Assistant
Mr. Basit Ali	Data Processing Assistant
Mr. Athar Awan	UNDP Consultant
SAMPLE DESIGN	
Ms. Rumana Sadaf	Chief Statistical Officer
Mr. Muhammad Waseem	Chief Statistical Officer
FIELD SERVICES	
Mr. Munawar Ali Ghanghro	Director
GEOGRAPHIC INFORMATIO SYSTEM (GIS)	
Qazi Ismatullah	Deputy Census Commissioner
Muhammad Nadeem Baig	Geographical Assistant
PRINTING PRESS	
Mr. Majeed Ullah Wazir	Superintendent
Mr. Tajmmul Hussain	Supervisor

1. Introduction

PSLM district level survey is the main source of monitoring developments plans at district level & its data used for **Estimation of Multidimensional Poverty Index (MPI)** by PD&SI. UN has adopted new development plan for post 2015 monitoring called Sustainable Development Goals (SDGs). Under SDGs there are 17 goals, 169 targets and 232 indicators. By considering the ground realities and SDGs, questionnaire of PSLM survey has been reviewed by technical committee. On the recommendations of technical committee changes has been incorporated and Modules regarding Disability, Migration, Information communication technology, Solid Waste Management, FIES and assets has been included in PSLM district level questionnaire for monitoring of related indicators at district level. Further 19 SDGs indicators will be reported through the survey at district level.

In previous rounds of district level PSLM survey, the sample size of approximately 5300 block covering 80,000 households were covered. However, for PSLM 2019-20, sample size has been raised to 6500 blocks covering 195,000 households by considering disability variable, as disability is a rare event and for reliable estimates 30 household has been enumerated from each selected block. Further, AJ&K and GB at district level are covered in this survey; previously, AJ&K and GB were representative at overall province level.

Objectives

The data generated though PSLM Survey is used by the government in formulating the poverty reduction strategy as well as development plans at district level. The indicators are developed at district level in the following sectors.

1. Education
2. Information Communication and Technology
3. Health
4. Disability
5. Migration
6. Housing Water Supply and Sanitation.
7. Household Perception and Satisfaction.
8. Food Insecurity Experience Scale.

1.2 Sample Design of PSLM Survey 2019-20 (District Level)

Universe

The universe for survey consists of all urban and rural areas of four provinces of Pakistan, ICT, Azad Jammu & Kashmir & Gilgit Baltistan excluded military restricted areas. It is worth mentioning here that areas of erstwhile FATA now merged in Khyber Pakhtunkhwa has been covered in this survey.

Sampling Frame

After Census-2017 sample frame of PBS has been updated and now used for sample selection of PSLM 2019-20. Each enumeration block is comprised to 200-250 houses on the average with well-defined

boundaries and maps. In **urban areas** each enumeration block is treated as PSU while in **rural areas** villages are divided into blocks with well-defined boundaries & maps and each separate block within village is considered as PSU.

The numbers of enumeration block in urban and rural areas of the country are:

NUMBER OF ENUMERATION BLOCKS AS PER SAMPLING FRAME 2017

Province	Urban	Rural	Total
Khyber Pakhtunkhwa	3267	22538	**25805**
Punjab	27162	59841	**87003**
Sindh	21892	17239	**39131**
Balochistan	1839	8383	**10222**
Islamabad	726	789	**1515**
Azad Jammu & Kashmir	526	3496	**4022**
Gilgit/Baltistan	148	1098	**1246**
Total	**55560**	**113384**	**168944**

Stratification Plan

Urban and rural part of each administrative district for all four provinces, Azad Jammu & Kashmir and Gilgit Biltistan has been considered as two separate independent stratums. Domain of estimation is district for all provinces.

5. Sample Size and Its Allocation

As already mentioned that disability variable has been added for the first time in district level PSLM survey, therefore, sample size has been estimated keeping in view the coverage and representation of rare event of disability variable.

All socio-economic indicators i.e. Net Enrollment Rate, Prenatal care, Immunization etc. are representative at 5% Margin of Error (MOE) and Disability is representative at 11% MOE district level for four provinces of Pakistan.

Keeping in view the variation observed in the population about the characteristics for which estimates are to be developed, distribution of population in the urban & rural domains, geographical level of estimates required, availability of field resources and cost, and especially for disability variable coverage, the sample size of 195,000 households covering 6500 sampled areas (enumeration blocks & villages) have been considered sufficient to generate variable estimates at district level in respect of four provinces Azad Jammu & Kashmir and GB. Allocation plan at district level and with covered blocks for four provinces of Pakistan Azad Jammu & Kashmir and Gilgit Baltistan is annexed.

6. Dropped Areas

607 sample blocks were not covered due to lockdown restriction implementation to control spread of COVID-19 pandemic, un-approachable/security problems/military restricted areas in the country. Province-wise details of dropped areas are as under:

Province	Urban	Rural	Total
Khyber Pakhtunkhwa	04	26	**30**
Punjab	31	157	**188**
Sindh	82	32	**114**
Balochistan	40	191	**231**
Azad Jammu & Kashmir	02	23	**25**
Gilgit/Baltistan	01	18	**19**
Total	**160**	**447**	**607**

It is worth mentioning here that five districts of Balochistan namely Zhob, Panjgur, Jhal Magsi, Chagai and Musa Khel are completely dropped. Further, complete urban part of four districts namely Kalat, Khuzdar, Qilla Saifullah and Shaheed Sikandarabad are also dropped.

7. Sample Design

A two stage stratified random sample design has been adopted for the survey.

Selection of Primary Sampling Units (PSUS)

Enumeration Blocks in both Urban and Rural domain are taken as Primary Sampling Units (PSUs). Sample PSUs from each ultimate stratum/sub-stratum are selected with probability proportional to size (PPS) method of sampling scheme. In both urban and rural domains, the number of households in an enumeration block has been taken as measure of size (MOS).

Selection of Secondary Sampling Units (SSUS)

The households of sample PSUs have been taken as Secondary Sampling Units (SSUs). 30 households have been selected from urban and rural domains respectively by using systematic sampling technique. It is pertinent to mention here that prevalence of disability variable is rare, therefore, 30 households at the second stage has been selected randomly for true representation and coverage of disability variable. Previously, 12 and 16 households from urban and rural areas were selected respectively.

4.4.1	Proportion of youth and adults with information and communications technology (ICT) skills, by type of skills.	-	**Graph 4.4.1**
4.5.1	Parity indices for all education indicators	-	**Graph 4.5.1**
4.6.1	Percentage of population in a given age group achieving at least a fixed level of proficiency in functional (a) literacy and (b) numeracy skills, by sex.	**60%**	**60%**
5.b.1	Proportion of individuals who own a mobile telephone, by sex		**45%**
6.1.1	Proportion of population using safely managed drinking water services. (6.1.1(a) percentage of households with improved source of drinking water & 6.1.1(b) Improved Drinking Water source within the premises	**95%** **69%**	**94%** **74%**
6.2.1	Proportion of population using safely managed sanitation services, (a) Improved Facility not Shared (b) Specific Place of hand-washing facility with soap and water.	**(a) 70%** **(b) 50%**	**(a) 68%** **(b)54%**
7.1.1	Proportion of population with access to electricity	**91%**	**91%**
7.1.2	Proportion of population with primary reliance on clean fuels and technology Disaggregation by cooking, heating, lighting, residence	**35%**	**37%**
11.2.1	Proportion of population that has convenient access to Public transport by sec,age and person either disabilities.		**44%**
16.6.2	Population satisfied with their last experience of public services.		
17.8.1	Proportion of individuals using the Internet.	**17%**	**19%**

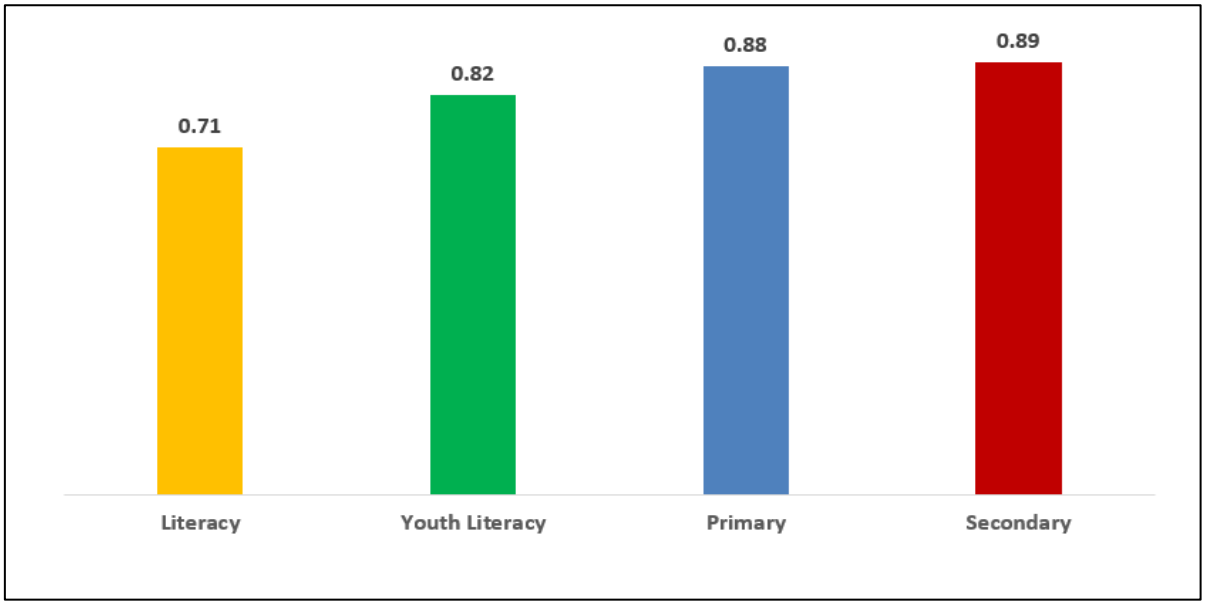

1.4.1: Proportion of Population living in household with access to basic Services.

4.4.1: Proportion of youth and adults with information and communications technology (ICT) skills, by type of skills.

4.5.1: Parity indices for all education indicators.

2. EDUCATION

2.1 Introduction

Pakistan is currently the fifth most populous country in the world with 207.68 million populations, and estimated to reach 403 million by 2050 (UN median range projection). Pakistan today than at any point in its history, has one of the world's largest youth populations with 64 percent of Pakistanis now under the age of 30. If Pakistan manages to educate and skill this surging youth population, it could benefit from a tremendous youth dividend that could help to fuel the country's economic growth, prosperity and development. Unlikely, the low economic growth rates, high levels of public debt, high rate of inflation, and budget shortfalls make the situation more worsen. This situation will improve in the near term and have, in fact, resulted in heavy-handed severity in the education sector and elsewhere.

Pakistan's education system has evolved substantially from both its Islamic and British historical roots. It has improved greatly in the 20th and 21st centuries, but still tends to rely too heavily on rote memorization and outdated teaching and examination methods. However, great developments have been made in improving literacy and participation rates in the country. Further, the education system remains largely elitist with access to the best educational opportunities available only to the more affluent or well-connected.

The PSLM data on Education is one of the reliable data source to monitor the progress in education sector; it produces variety of key indicators for all provinces and districts disaggregated by region and gender. In addition, it is also one of the major source for monitoring SDG's (the successor of MDG's), five education indicators under goal 4 is calculated by PSLM data.

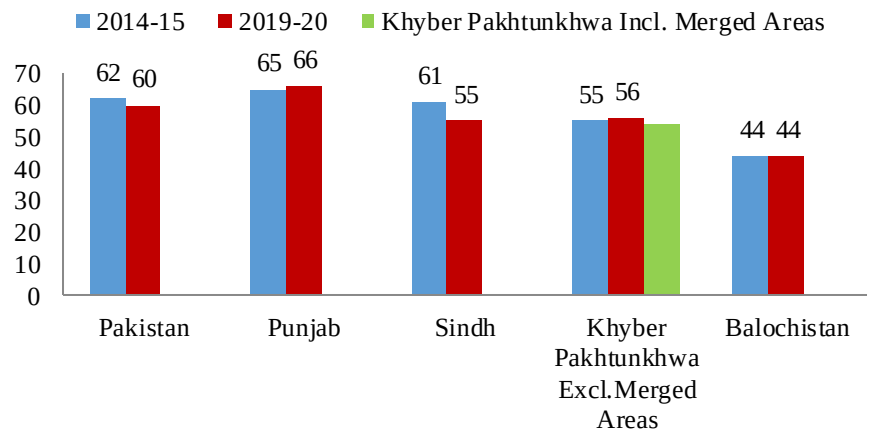

According to PSLM survey, educational data results are showing decreasing or stagnant trend when comparing its results with previous rounds. Therefore, it is highly recommended that the government should give a very high priority to develop a high quality, equitable and widely accessible education system in Pakistan. Lastly, it is need of the hour to have such a mechanism to facilitate different level of management of the education sector to achieve the desired goals.

This chapter mainly covers educational indicators such as School Attendance, Completed Primary Level, Out of School, Gross and Net enrolment Rates for Primary, Middle and Matric, Literacy, Youth Literacy, Adult Literacy and Reasons for Leaving School etc.

2.2 School Attendance:

The population age of ten years and older that has ever attended school at National level is 60 percent in 2019-20 as compared to 62 percent in 2014-15. However, regional comparison also shows declining trend in both urban and rural areas with 73 and 52 percent in 2019-20 as compared to 77 and 52 percent in 2014-15.

Figure-1-School Attendance by Province

Provincial Picture shows that Punjab has the highest percentage of population that has ever attended school with 66 percent in 2019-20 as compared to 65 percent in 2014-15 followed by Khyber Pakhtunkhwa (Excluding Merged Areas) with 56 percent in 2019-20 as compared to 55 percent in 2014-15. However, Balochistan is at bottom with 44 percent as shown in Figure-1and this proportion is higher in males with 70 percent than in female with 50 percent. (Table 2.1)

The Islamabad capital city has the highest percentage of ever attended school population with 85 percent. While, the district wise comparison shows that Rawalpindi with 83 percent, Korangi with 82 percent, Abbottabad with 77 percent, Pishin with 59 percent are the top districts in their respective provinces. Furthermore, District Rajanpur with 40 percent, Thatta with 26 percent, Mohmand with 28 percent, Dera Bugti, Shaheed Sikandarabad and Sherani with 14 percent are at bottom in their respective provinces. Figure-2

Figure-2 Top Districts within Provinces

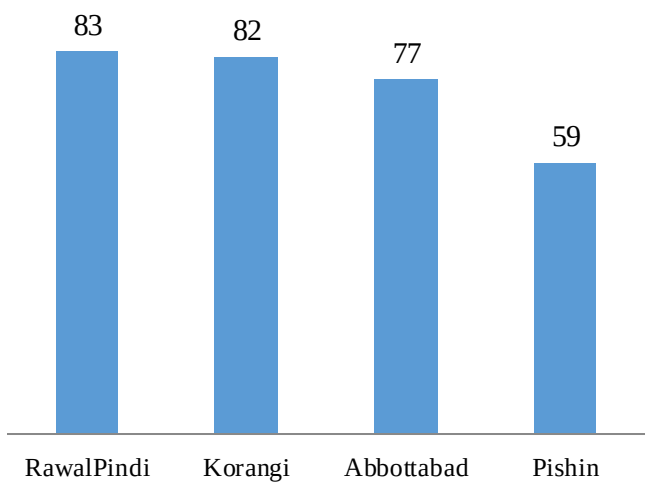

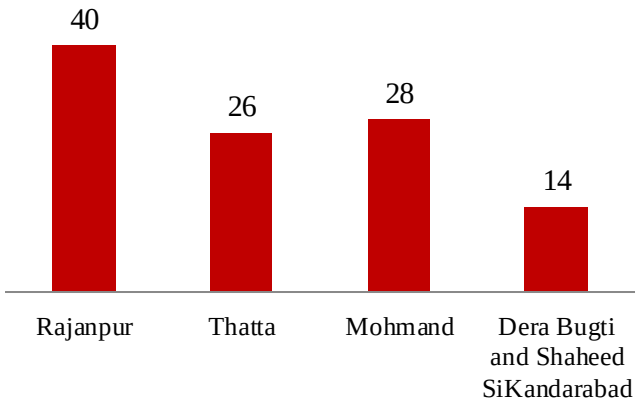

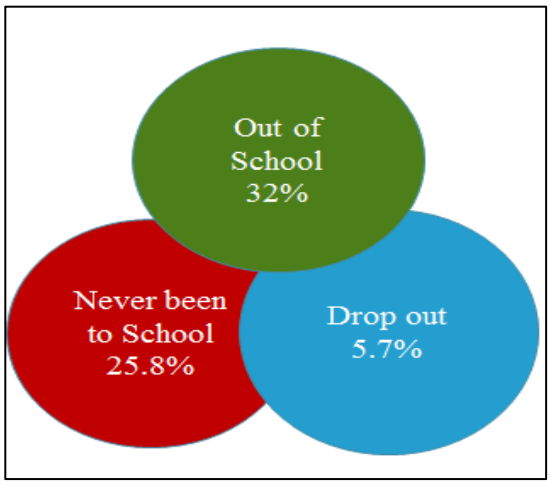

Figure-2 Bottom Districts within Provinces

2.2.1 Completed Primary Level or higher

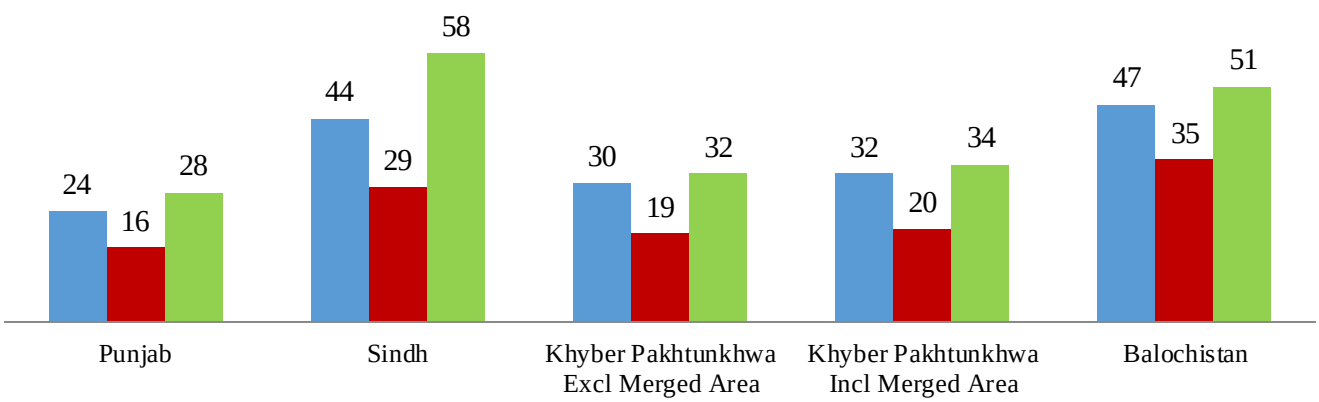

At national level population that has completed primary level or higher shows slight decline with 51 percent in 2019-20 as compared to 52 percent in 2014-15. Such as this percentage shows decline in urban areas with 65 percent in 2019-20 as compared to 68 percent in 2014-15 however, in rural areas it remains stagnant at 42 percent in 2019-20 as in 2014-15. Further, gender comparison shows that males who have completed primary level or higher are higher with 60 percent than females with 42 percent in 2019-20. Province wise comparison reveals that Punjab has increased to 56 percent during the period 2019-20 from 54 percent in 2014-15 and have the highest proportion of population that has completed primary level followed by Sindh with 49 percent in 2019-20 as compared to 53percent in 2014-15, Khyber Pakhtunkhwa with 43 percent in 2019-20 as compared to 44 percent in 2014-15 and Balochistan has the lowest percentage of population who has completed primary level or higher with 36 percent in 2019-20 as compared to 35 percent in 2014-15. However, Islamabad shows increasing trend in completing primary level or higher by 2 percent with 79 percent in 2019-20. Furthermore, district comparison reveals that Rawalpindi with 74 percent, Korangi with 76 percent, Abbottabad with 65 percent and Gwadar with 53 percent are the highest performing districts in their respective provinces. However, Rajanpur with 30 percent, Thatta with 20 percent, Mohmand and Bajur with 18 percent and Dera Bugti with 8 percent are at lowest districts. Table 2.2

2.3 Out of School Children

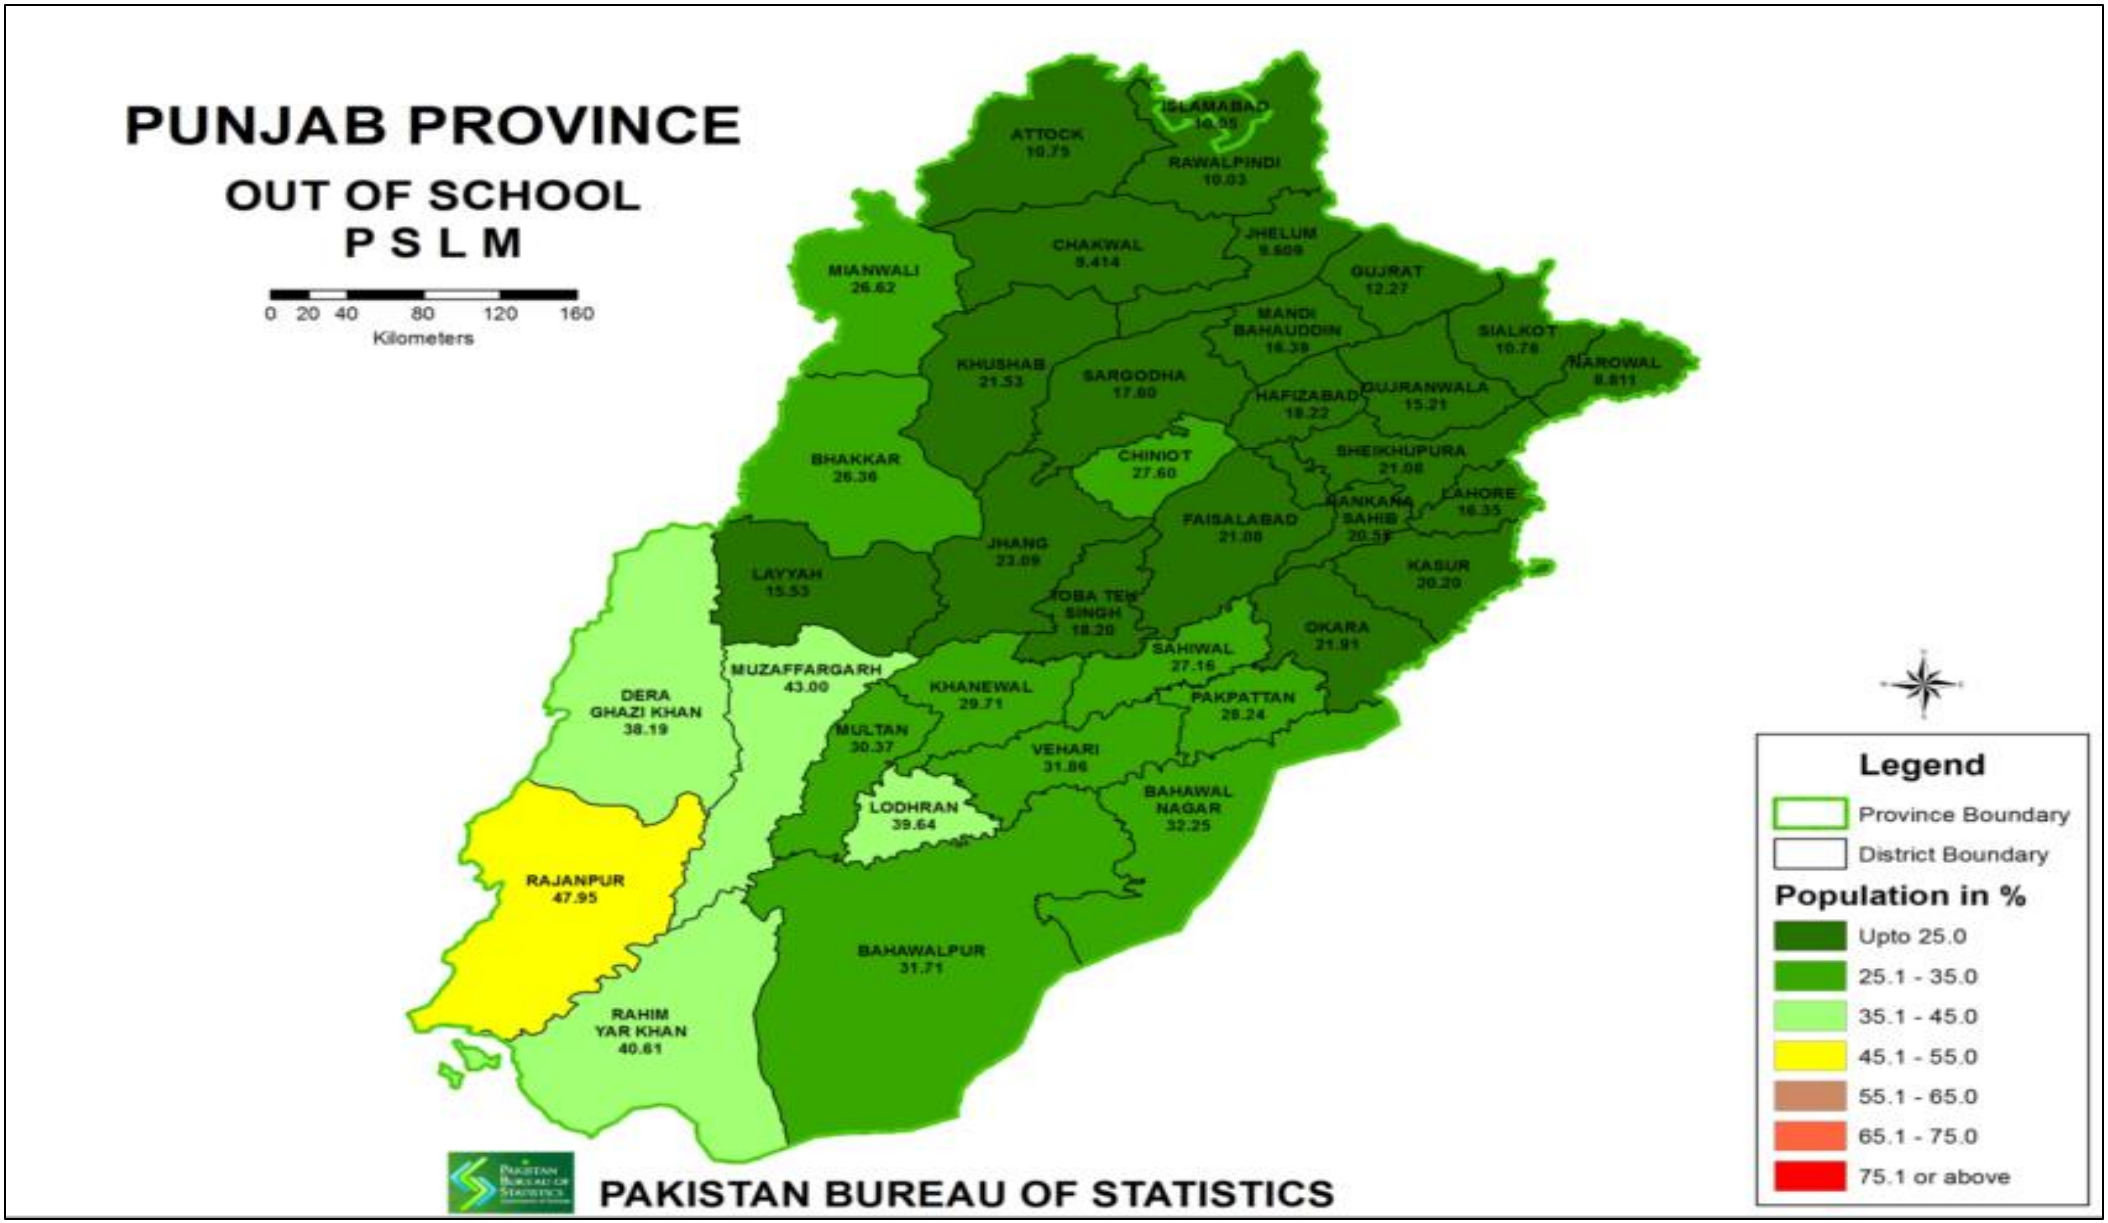

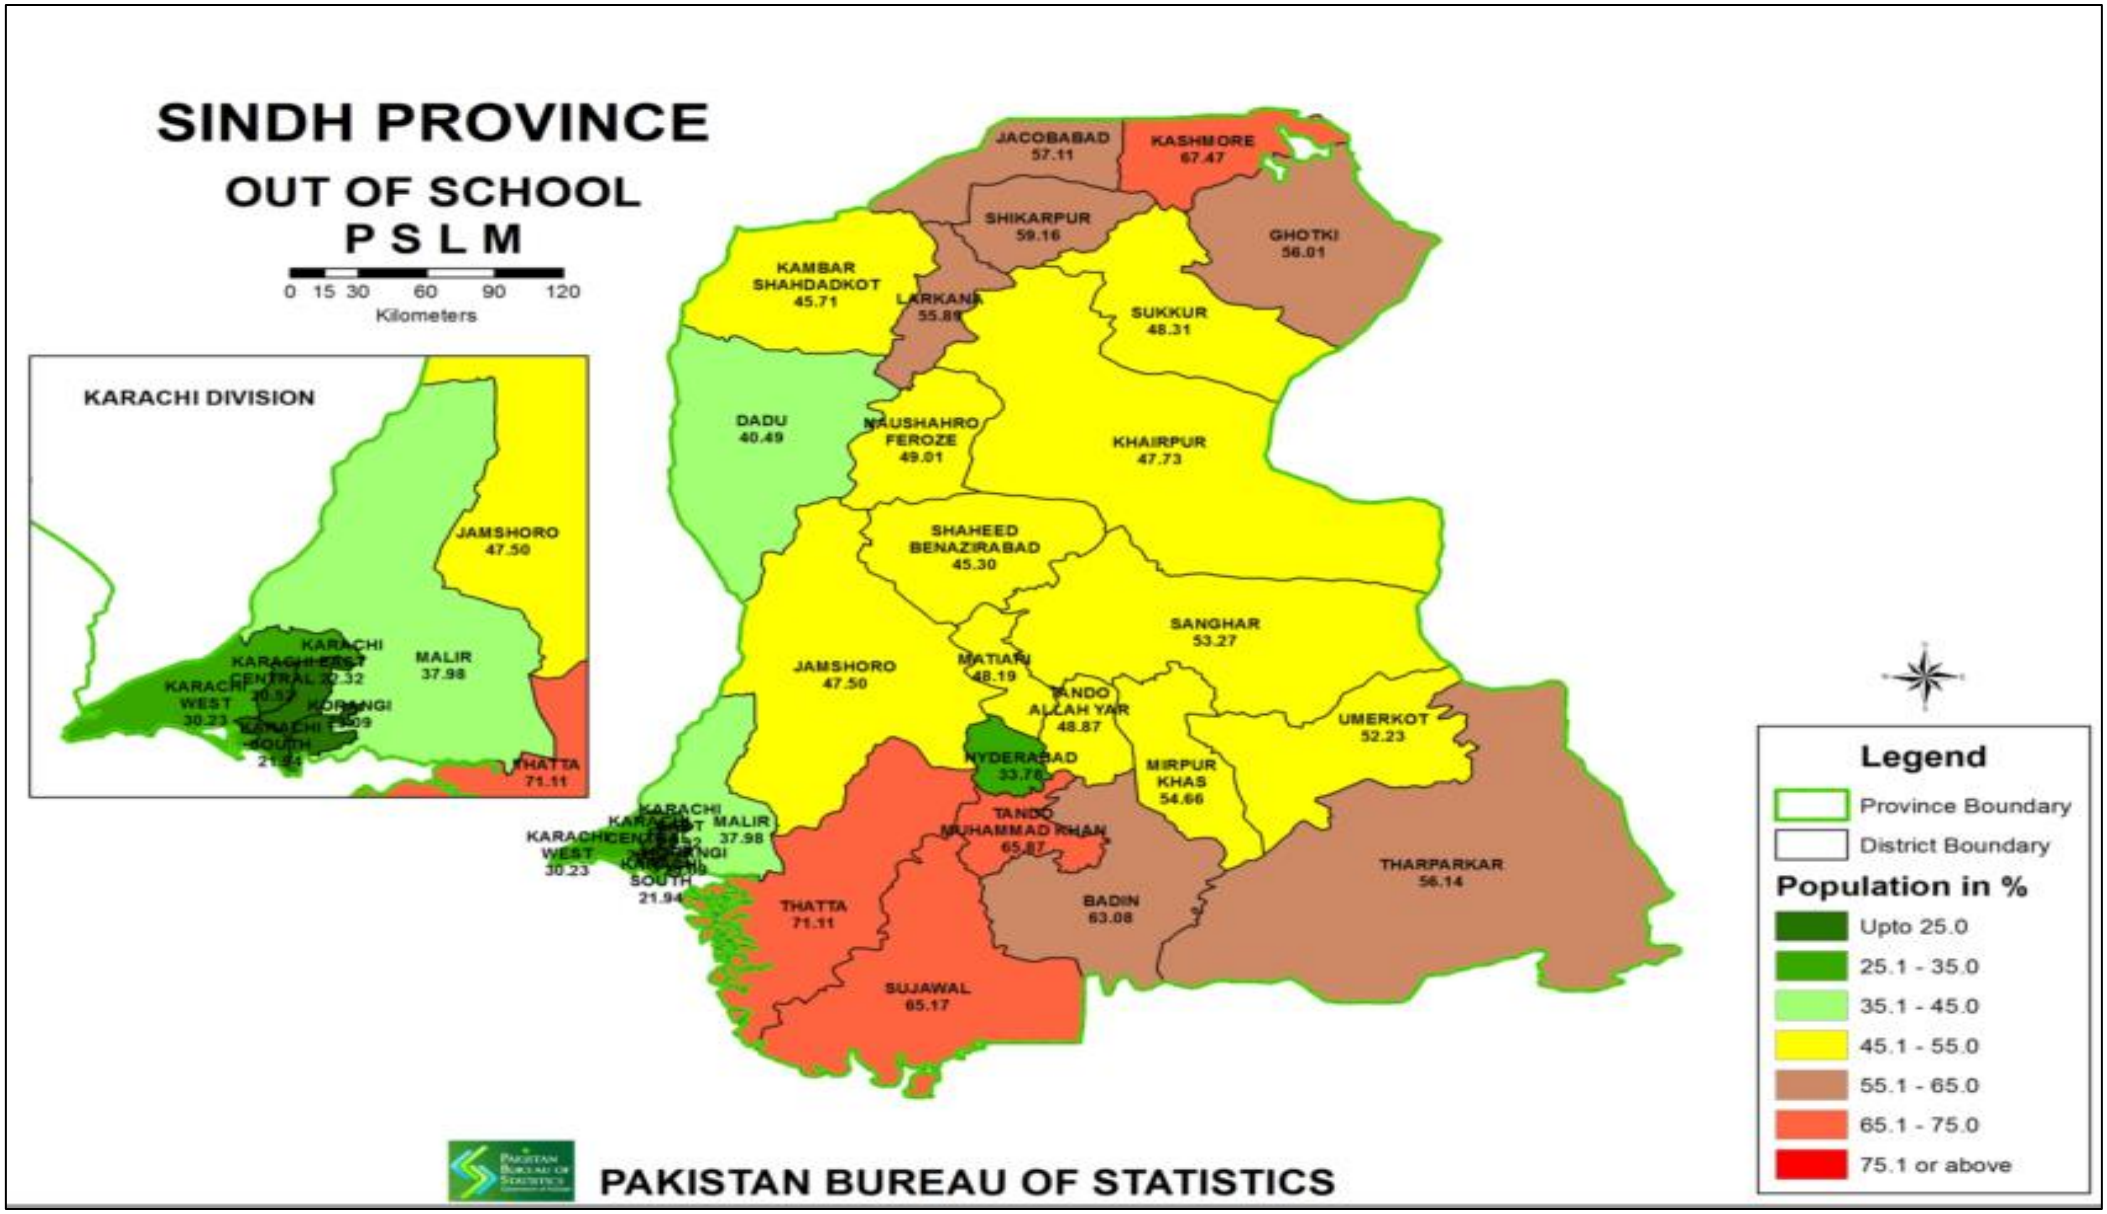

Pakistan is ranked amongst the top three countries in the world that have the highest number of out-of-school children. It is crucial to understand that huge socioeconomic disparities exist in Pakistan not only between rural and urban regions, but also between the country's diverse provinces. Further, these disparities have a big impact on educational outcomes, including vast gaps in access to education and overall educational attainment (UNESCO's Education for All Global Monitoring Report). According to PSLM Survey, Out of School consists of children aged 5-16 years who have never been to school and those children who attended school and left afterwards, shows that out of school children at national level is 32 percent in 2019-20. Further, out of school children is calculated first time at district level in PSLM 2014-15. So for the overall regional comparison shows that out of school children are higher in rural areas with 37 percent as compared to 22 percent in urban areas. The overall Punjab has the lowest out of School children with 24 percent while; Balochistan has the highest out of school children with 47 percent, Table 2.15. Regional comparison of provinces is shown in Figure 3.

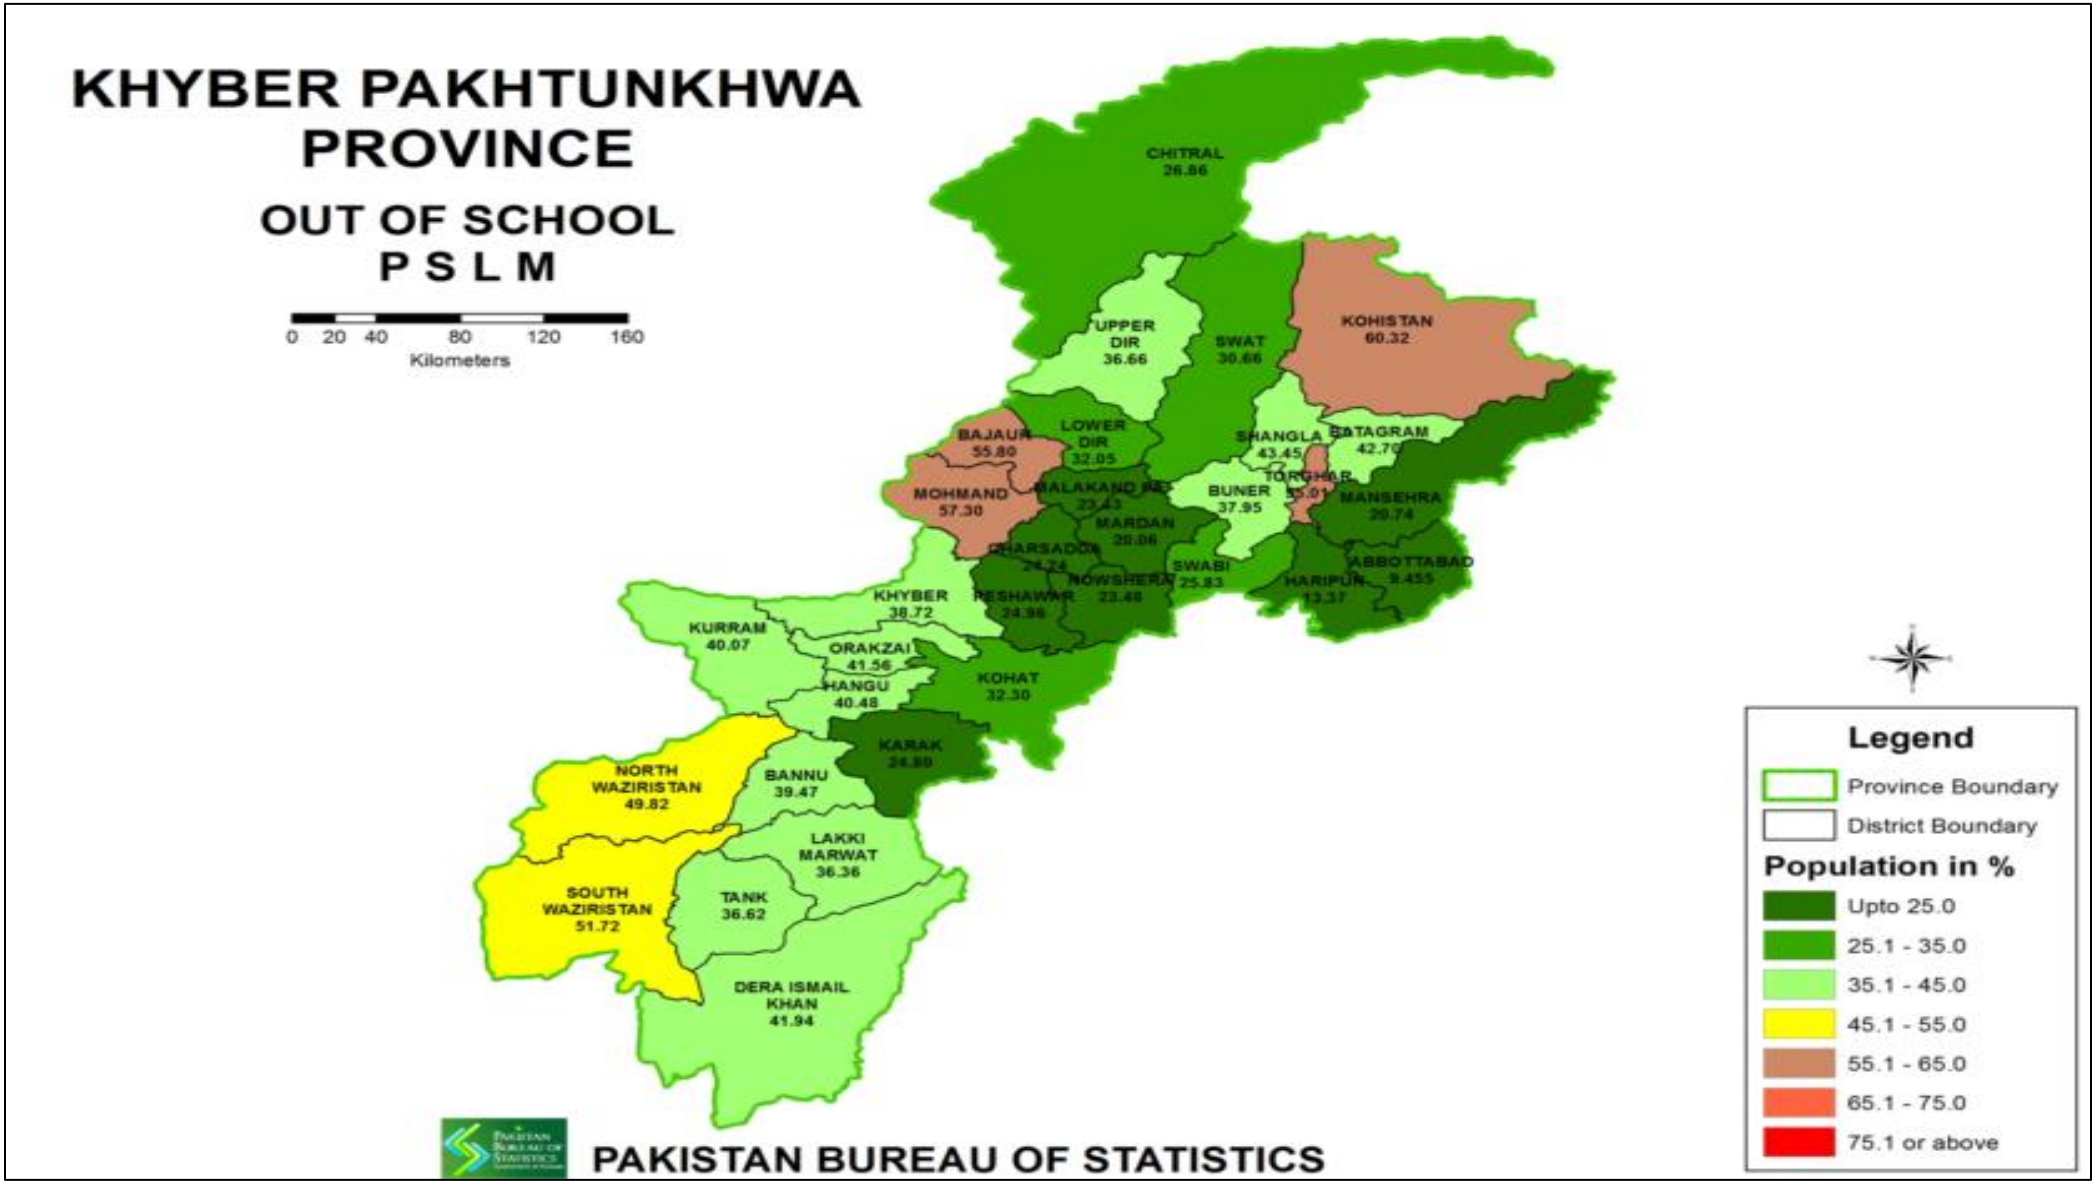

Figure -3 Out of School by Region

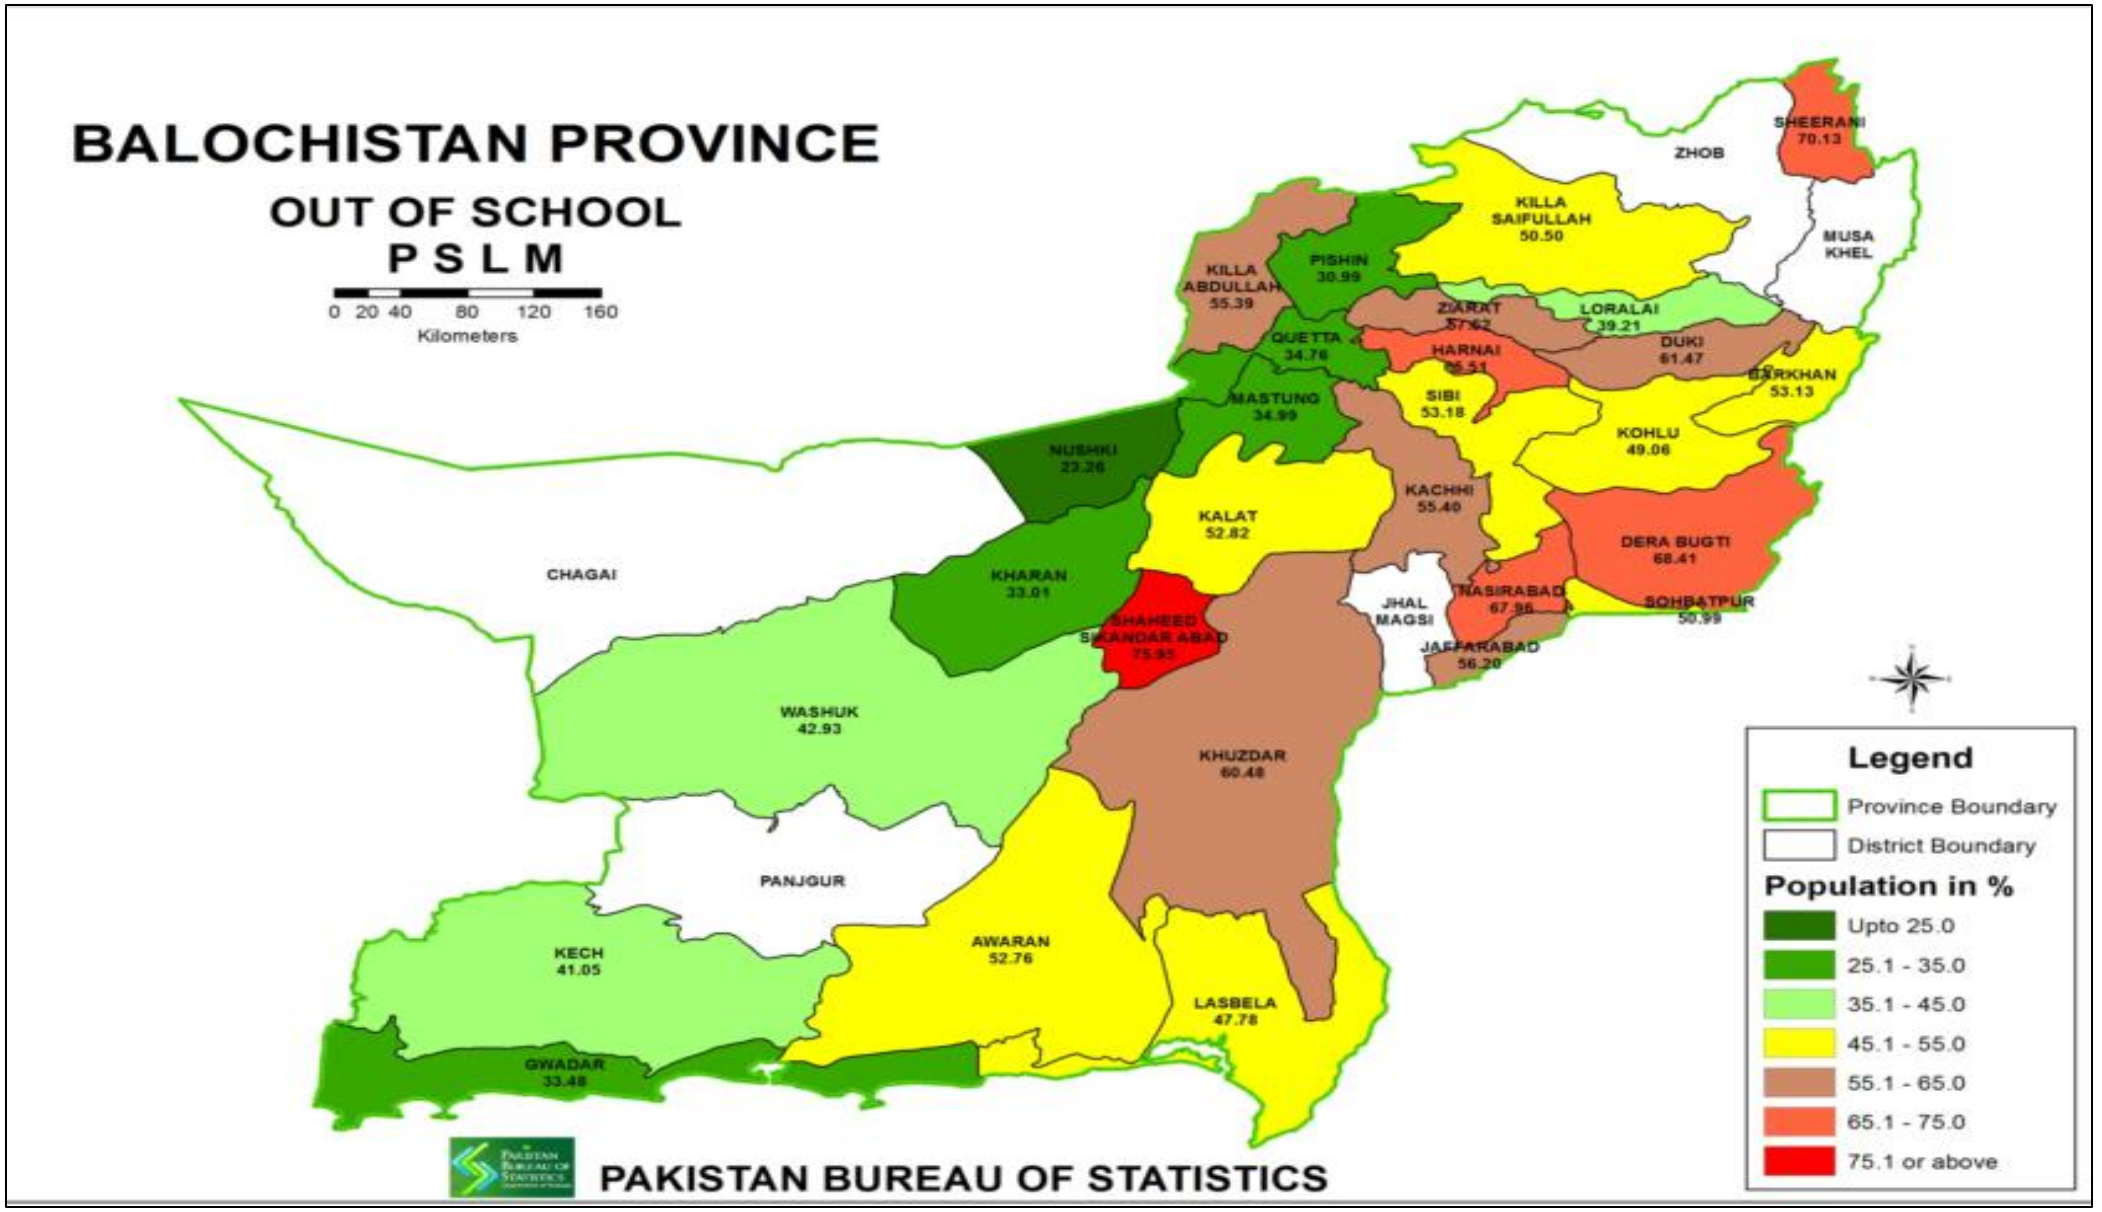

District wise comparison shows that almost two third of the districts of Punjab have less than 25 percent out of school children, Rajanpur is at top with highest out of school children i.e. 48 percent however Chakwal & Narowal is at bottom with the lowest number of out of school children with 9 percent. Secondly, in Sindh, Thatta with 71 percent is at top district in out of school children however, Karachi central with 21 percent is at bottom. Thirdly, in Khyber Pakhtunkhwa Mohmand with 57 percent is at top in out of school children and Abbottabad with 9 percent is at bottom. Lastly, in Balochistan, Shaheed Sikandarabad with 76 percent is the top most out of school district and Nushki with 23 percent is the bottom district with less than 25 percent of out of school children.

2.4 Enrolment Rates

Enrollment rates are calculated through Net Enrolment Rate (NER) and Gross Enrolment Rate (GER) by using different age groups. NER is the number of children with specific age attending specific class divided by number of children with specific age and GER is the number of children attending specific class divided by number of children with specific age. However, looking at the data situation it looks more appropriate to consider the age group "6-10 "for Primary, "11-13" for Middle and " 14-15" for Matric.

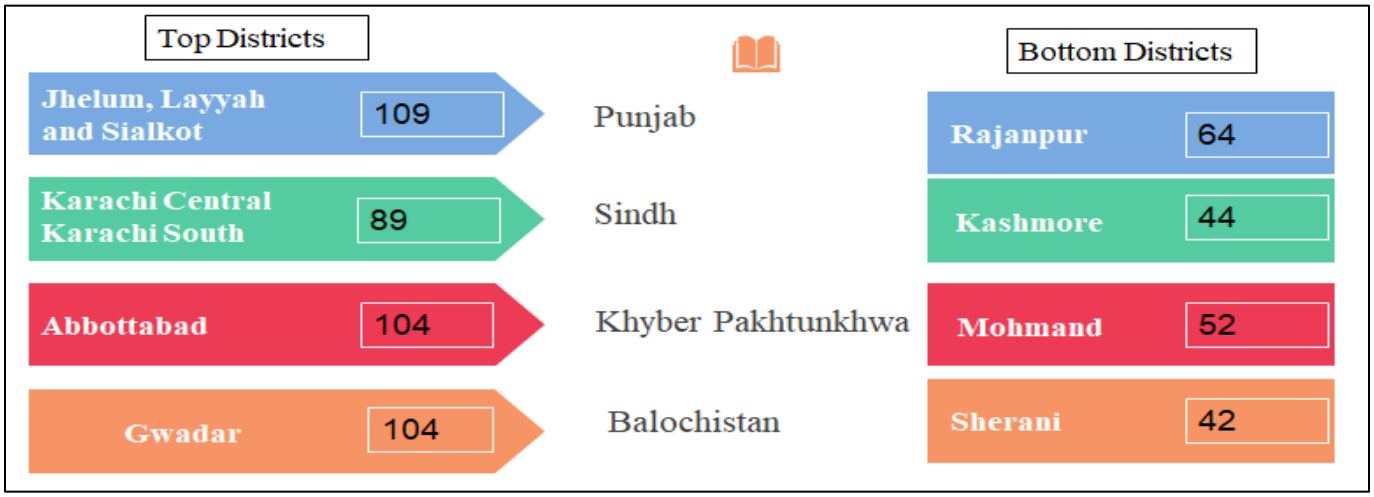

2.4.1 Gross Enrolment Ratio at Primary (GER)

Gross Enrolment Rate is defined as the number of children attending primary schools divided by the number of children who ought to be attending GER is explained in PSLM 2019-20 in two ways i.e excluding katchi and excluding katchi with different age groups. The Gross Enrolment ratio at National Level age (6-10) excluding Katchi is 84 percent in 2019-20 as compared to 91 percent in 2014-15. Furthermore, the regional comparison also shows declining trend in both urban and rural areas with 91 and 81 percent in 2019-20 as compared to 103 and 85 percent in 2014-15. Moreover, the provincial picture shows that Punjab with 92 percent is at top in 2019-20 as compared to 98 percent in 2014-15 followed by Khyber Pakhtunkhwa (Including Merged Areas) with 85 percent in 2019-20 as compared to 92 percent in 2014-15 however, Sindh is at bottom with 71 percent in 2019-20 as compared to 79 percent in 2014-15. In addition, the district wise comparison shows that Jhelum, Layyah and Sialkot with 109 percent, Karachi central and Karachi South with 89 percent, Abbottabad and Gwadar with 104 percent are the top districts in their respective provinces however, Rajanpur with 64 percent, Kashmore with 44 percent, Mohmand with 52 percent and Sherani with 42 percent are the bottom districts in their respective provinces, Table 2.3a.

Figure -4 GER Primary (6-10)

Gross Enrolment ratio at Primary age (6-10) and class (1-5)

Similar patterns are observed when age group is expanded to 5-9 years. Gross enrollment Ratio at Primary Level age (5-9) excluding Katchi class is 82 percent in 2019-20 as compared to 89 percent in 2014-15. However, Province wise comparison reveals that all the provinces has shown significant decrease in 2019-20, Punjab with 90 percent in 2019-20 from 97 percent in 2014-15, Sindh with 67 percent in 2019-20 from 79 percent in 2014-15, Khyber Pakhtunkhwa with 83 percent in 2019-20 from 90 percent in 2014-15 and Balochistan with 70 percent in 2019-20 from 71 percent in 2014-15, Table 2.3b.

Gross enrollment Ratio at Primary age (4-9) including Katchi is 87 percent in 2019-20 as compared to 93 percent in 2014-15. The provincial comparison shows that Punjab is at top with 100 percent followed by Khyber Pakhtunkhwa with 85 percent; however, Balochistan is at bottom with 65 percent. Additionally, the pattern within districts in the province is more or less similar to GERs without including Katchi class, Table 2.4.

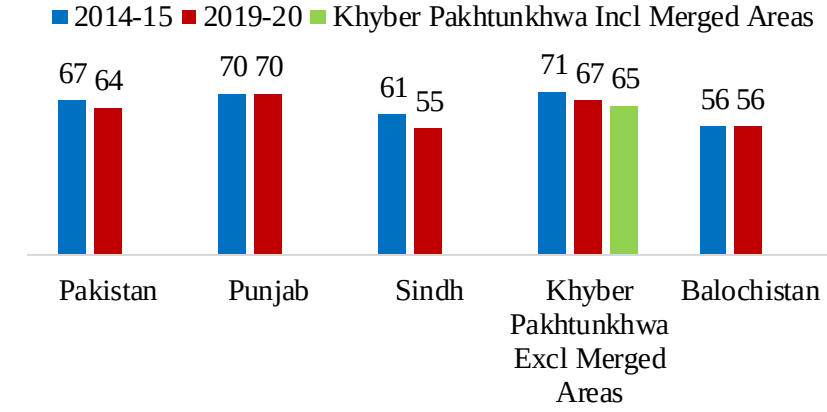

Gross Enrollment Ratio (GER) for government primary schools age (5-9) by province and district excluding katchi class shows decline with 52 percent in 2019-20 as compared to 55 percent in 2014-15. However, regional comparison also shows decline in both urban and rural areas with 40 percent in 2019-20 as compared to 43 percent in 2014-15 and 58 percent in 2019-20 as compared to 60 percent in 2014-15. Therefore, province wise comparison reveals that there is overall declining trend in GER for government primary schools, Punjab with 53 percent in 2019-20 as compared to 54 percent in 2014-15, Sindh with 42 percent in 2019-20 as compared to 50 percent in 2014-15, Khyber Pakhtunkhwa with 60 percent in 2019-20 as compared to 62 percent in 2014-15 and Balochistan with 59 percent in 2019-20 as compared to 64 percent in 2014-15. Furthermore, the district wise comparison shows that in Punjab Layyah with 84 percent is at top while Lahore with 34 percent is at bottom, in Sindh, Shaheed Benazirabad with 62 percent is at top while

Korangi with 16 percent is at bottom, in Khyber Pakhtunkhwa Karak with 79 percent is at top while Mohmand is at bottom with 36 percent and in Balochistan, Gwadar is at top with 96 percent however Sherani with 21 percent is at bottom, Table 2.5.

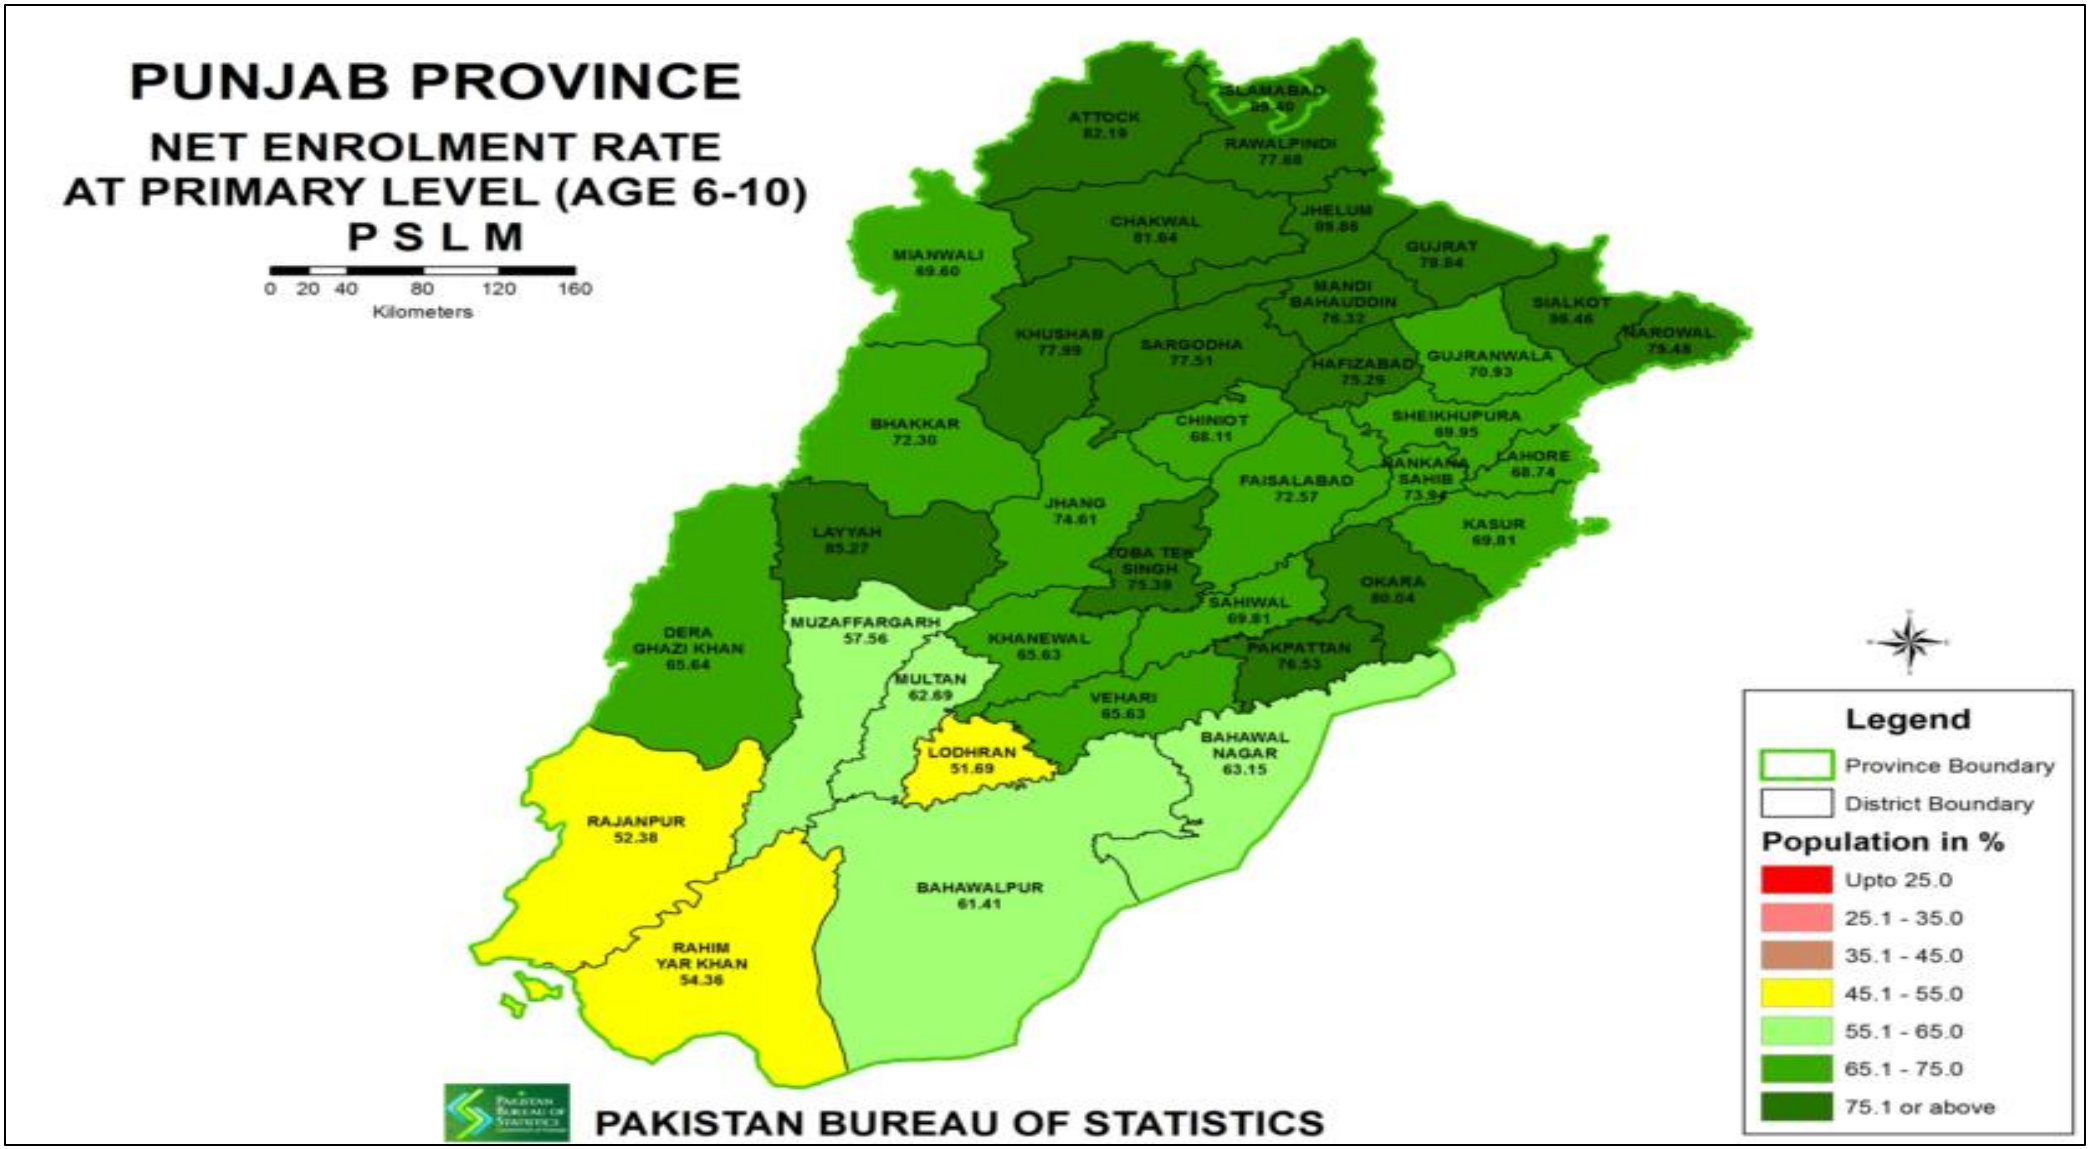

2.4.2 Net Enrolment Rate at Primary (NER)

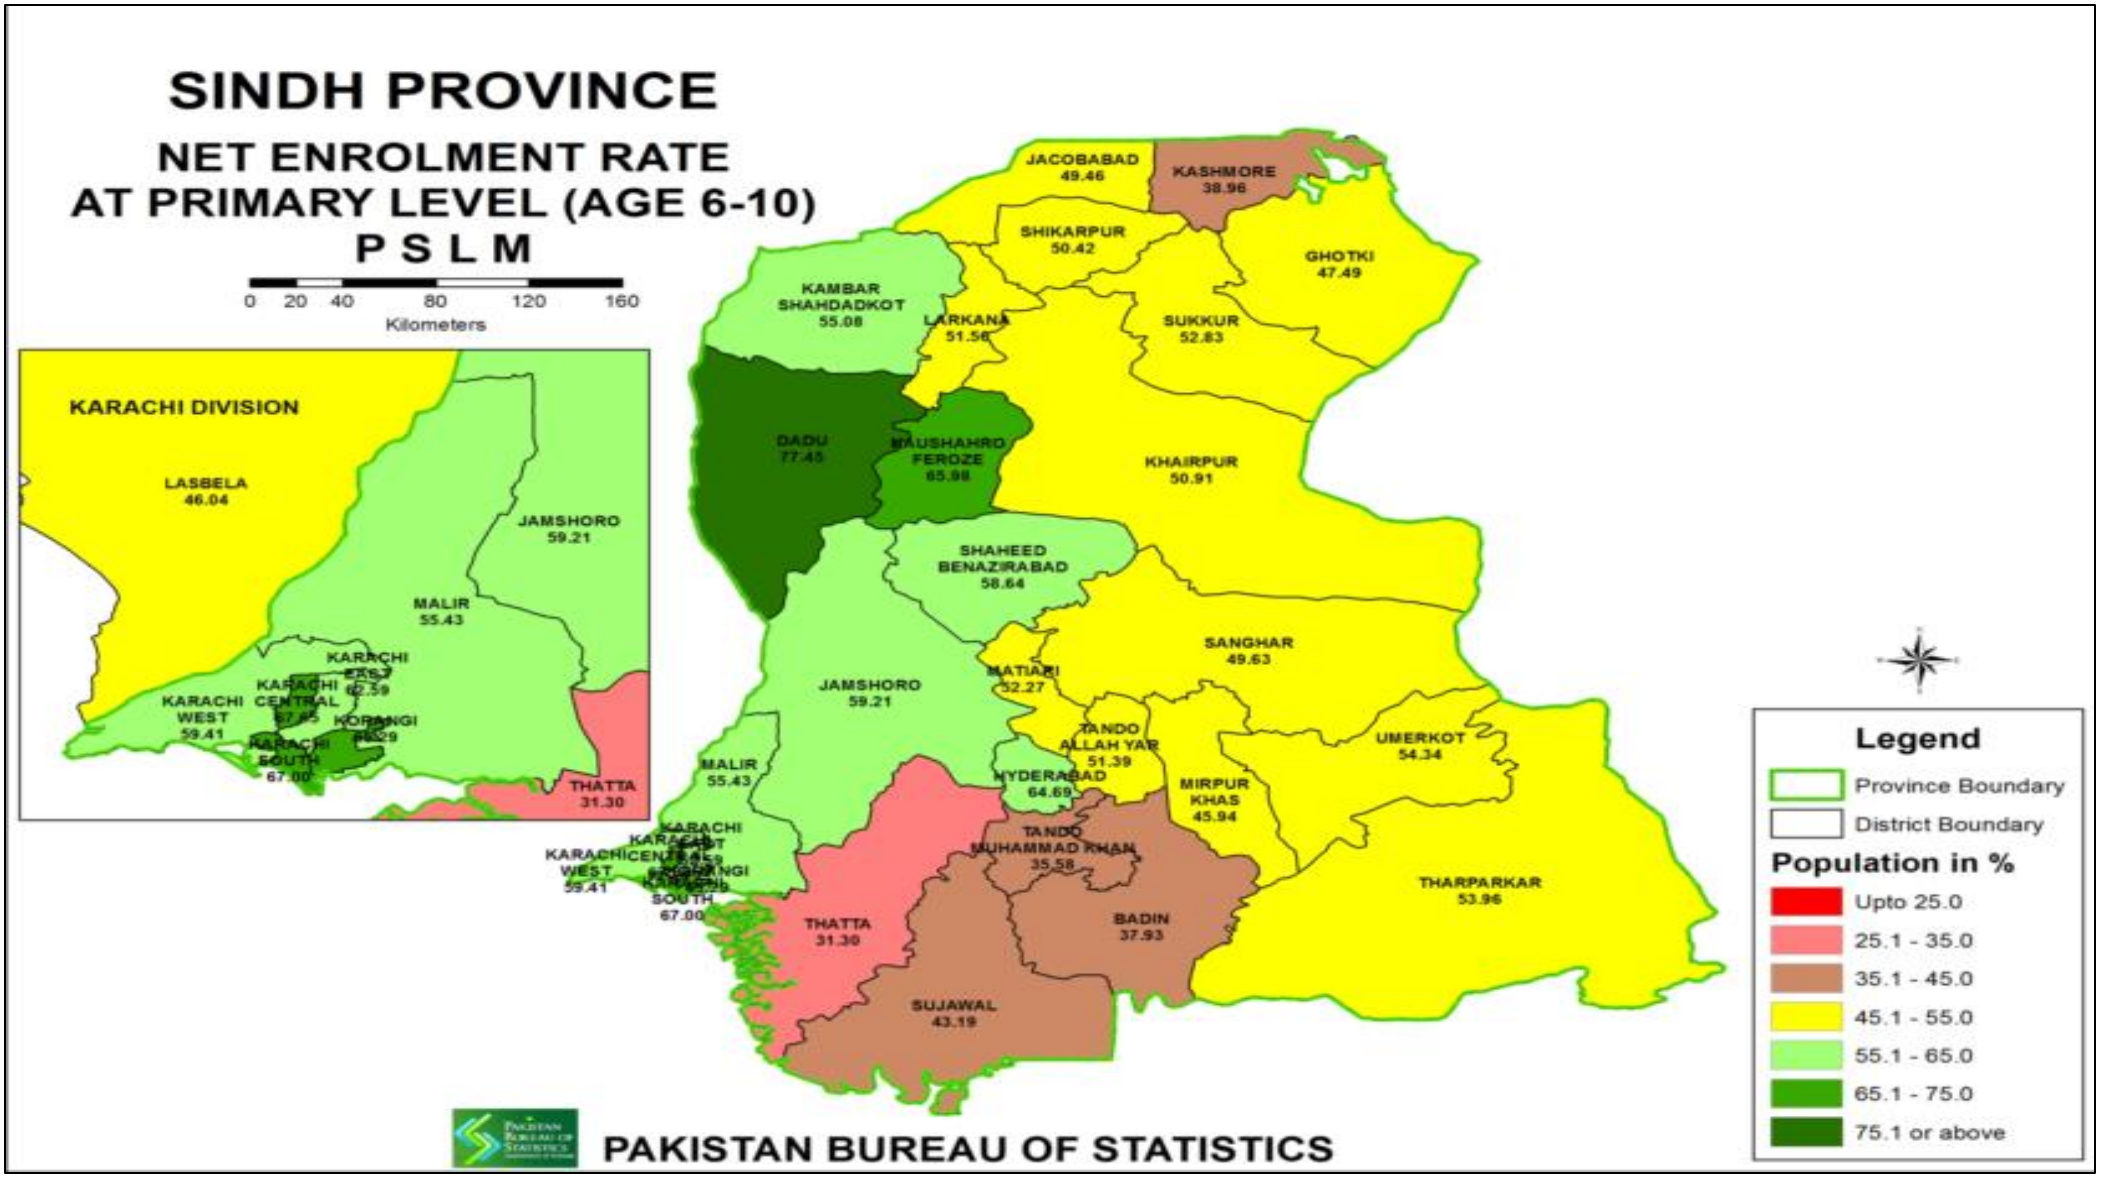

The Net enrolment rate (NER) is the number of children with specific age group attending specific class divided by number of children with specific age group. The overall NER Primary Age (6-10) is reported as 64 percent in 2019-20 as compared to 67 percent in 2014-15. Furthermore, in provinces, Punjab and Balochistan remains stagnant at 70 percent and 56 percent in 2019-20 and 2014-15 respectively, however, Sindh and Khyber Pakhtunkhwa (Excluding Merged Areas) shows decreasing pattern with 55 percent and 67 percent in 2019-20 as compared to 61 percent and 71 percent in 2014-15 respectively, Table 2.6-a.

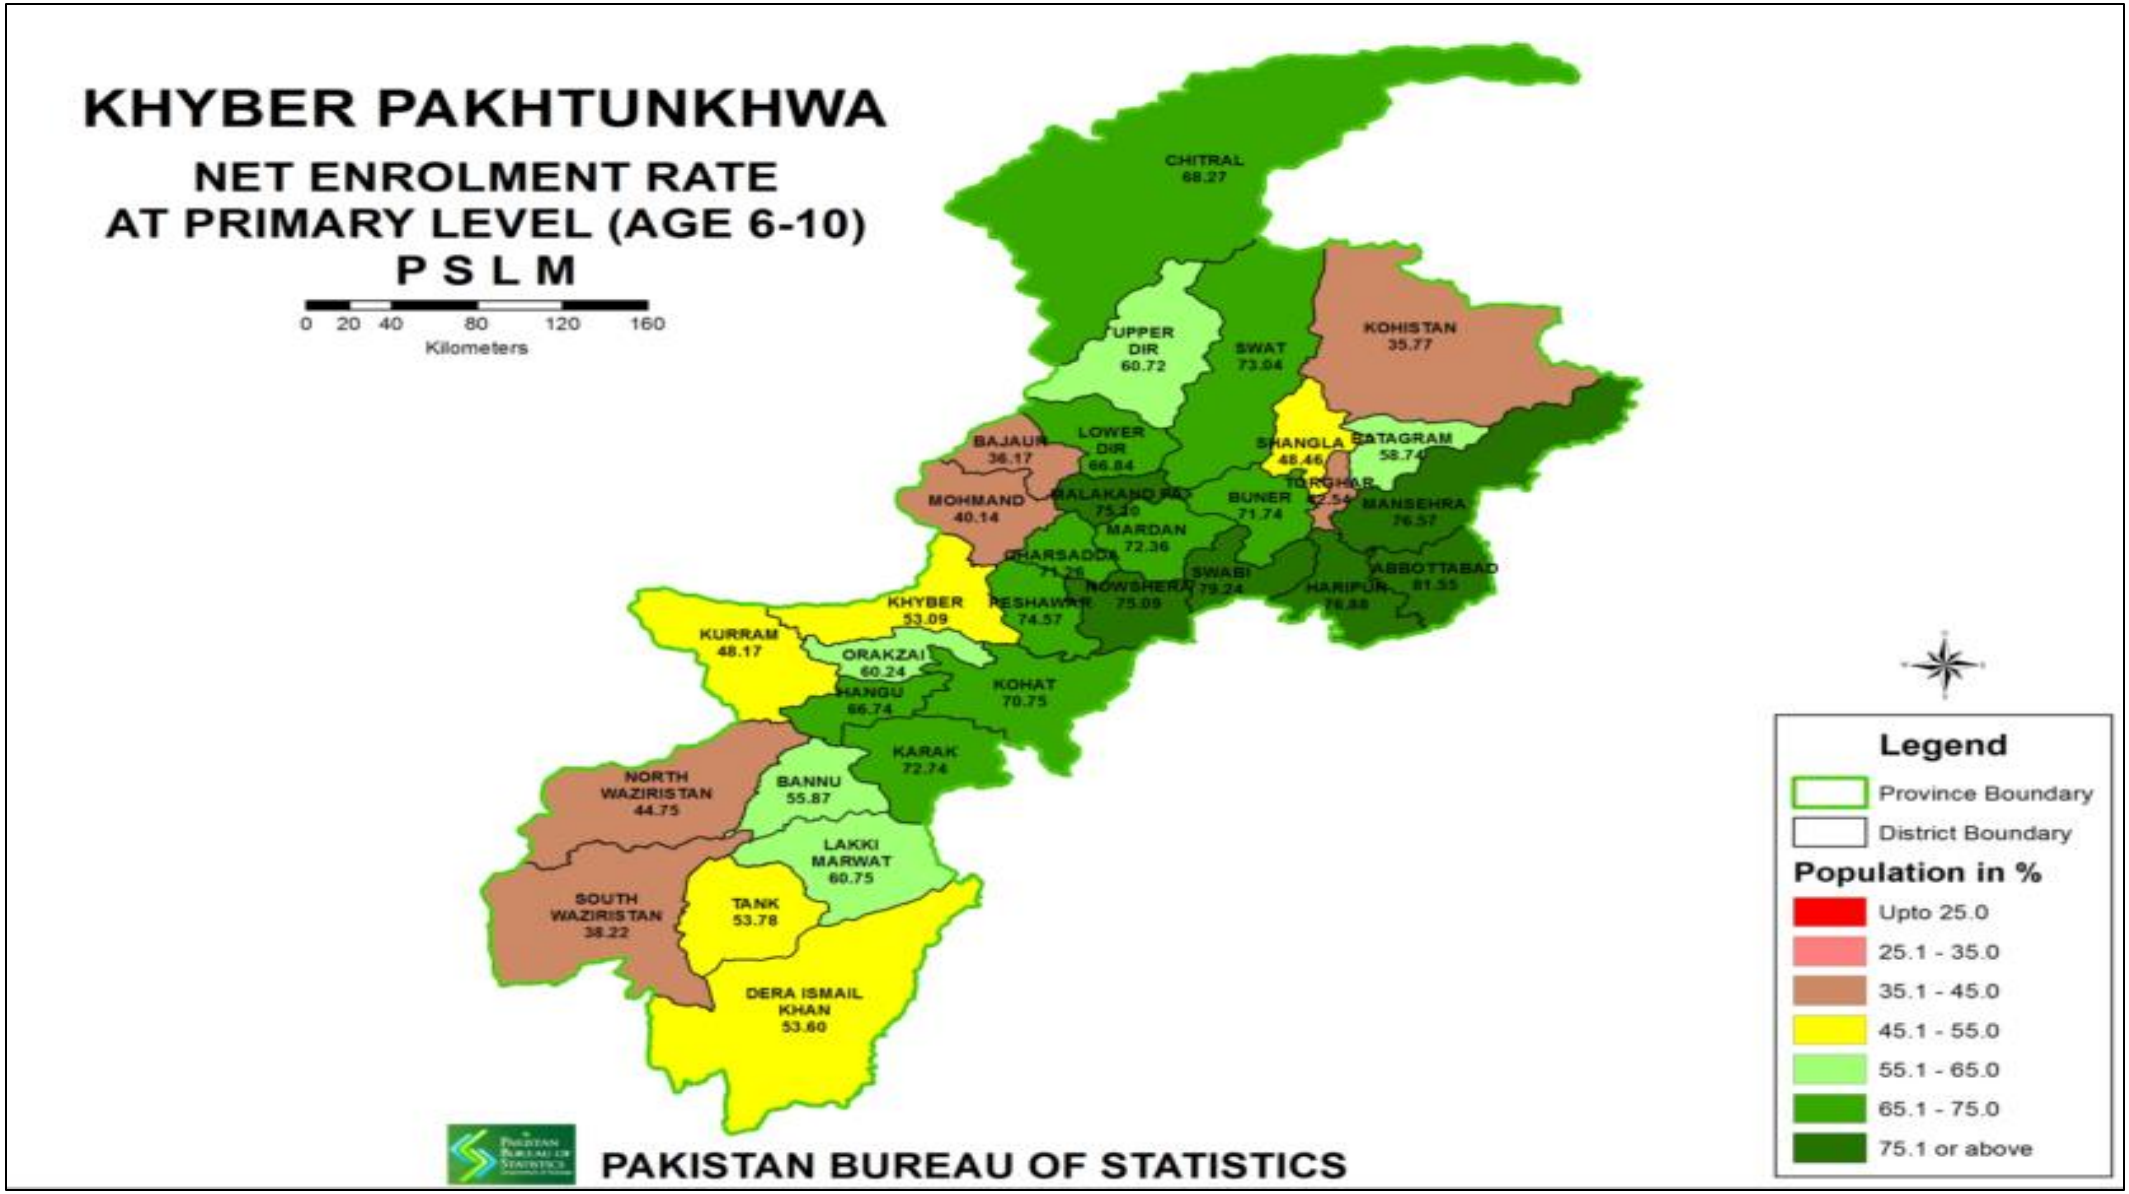

Figure 5 NER Primary (6-10)

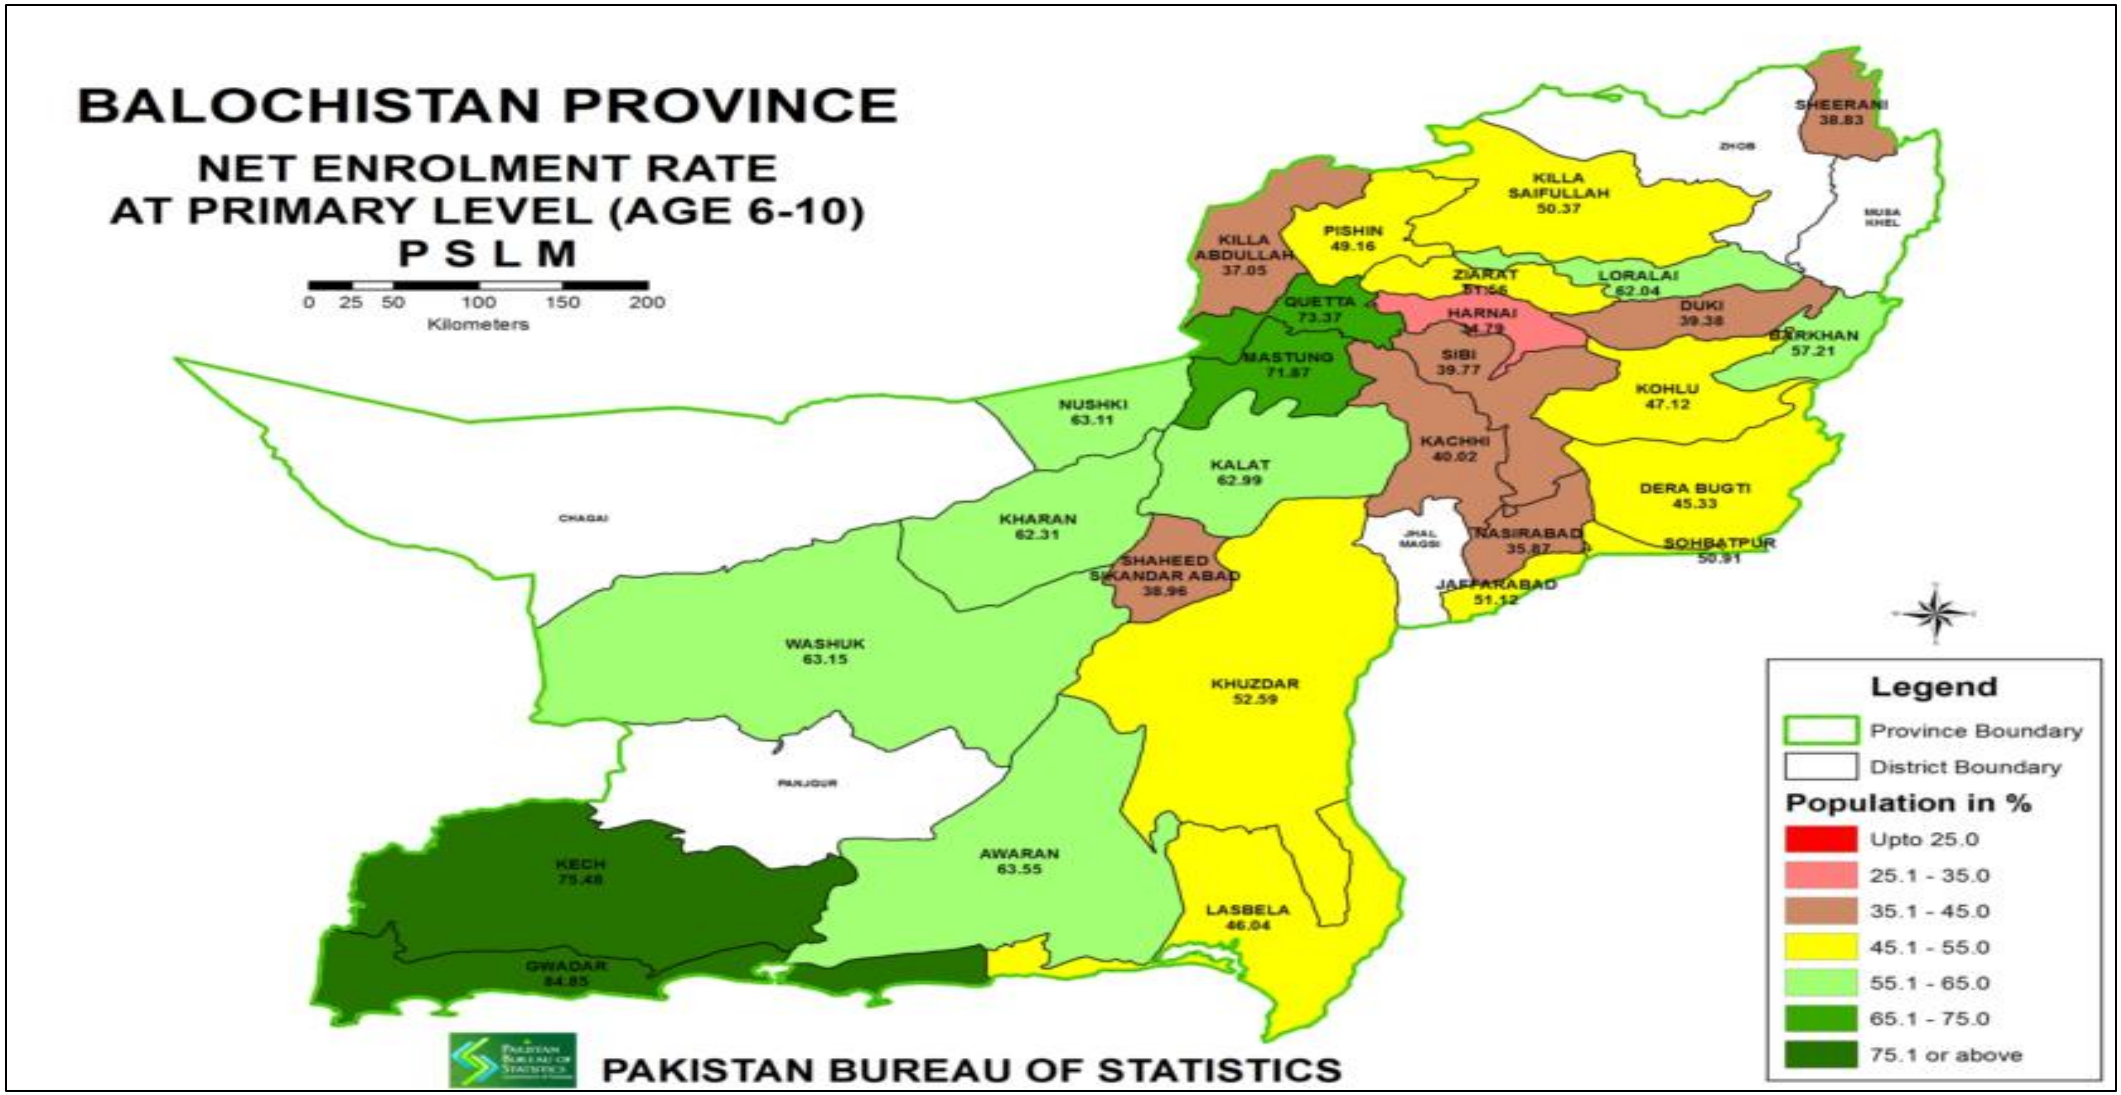

While comparing districts among provinces it is observed that Jehlum with 90 percent, Dadu with 77 percent, Abbottabad with 82 percent and Gwadar with 85 percent are at top rank districts in their respective provinces. In addition, the Lodhran & Rajanpur with 52 percent, Thatta with 31 percent, Bajur & Kohistan with 36 percent and Harnai with 35 percent are the bottom districts in their respective provinces.

The Overall NER Primary Age (5-9) is reported as 51 percent in 2019-20 as compared to 57 percent in 2014-15. In provinces, the same pattern is observed for all four provinces and in their respective districts as discussed above, Table 2.6-b.

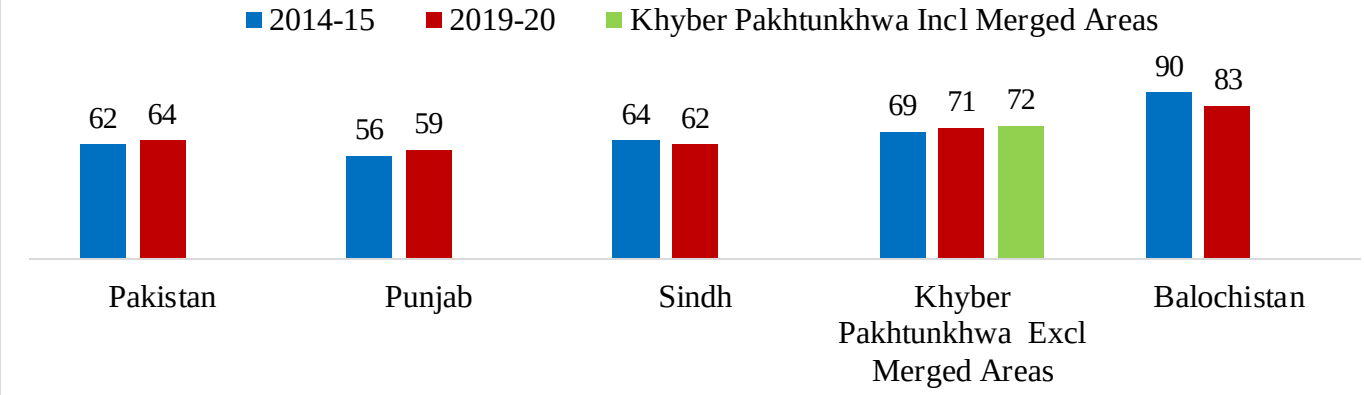

The Net Enrollment Rate at the primary level age (4-9) including katchi class is 60 percent at National level in 2019-20 as compared to 65 percent in 2014-15. Furthermore, Provincial comparison shows that Punjab is at top with 70 percent followed by Khyber Pakhtunkhwa (Including merged areas) with 56 percent; while Balochistan is at bottom with 44 percent, Table 2.7.

The Net enrolment rate in Government Primary Schools Age (5-9) excluding katchi has decreased to 32 percent at National level in 2019-20 as compared to 34 percent in 2014-15. Moreover, regional comparison shows declining pattern in both urban and rural areas with 24 percent in 2019-20 as compared to 26 in 2014-15 and 36 percent in 2019-20 as compared to 37 percent in 2014-15 respectively. While provincial comparison shows that Balochistan is at top with 39 percent followed by Khyber Pakhtunkhwa with 35 and Punjab with 32 percent, however, Sindh is at bottom with 28 percent, Table 2.8.

2.4.3 Primary Level Enrollment in Govt. School

Primary Level Enrolment in Government Schools a percentage of Total Primary excluding Katchi is 64 percent in 2019-20 as compared to 62 percent in 2014-15. The provincial comparison shows that Balochistan is at top with 83 percent followed by Khyber Pakhtunkhwa with 72 percent, however, Punjab is at bottom with 59 percent, Table 2.9-a.

Figure-6 Primary Level Enrolment in Govt. Schools a percentage of Total Enrolment

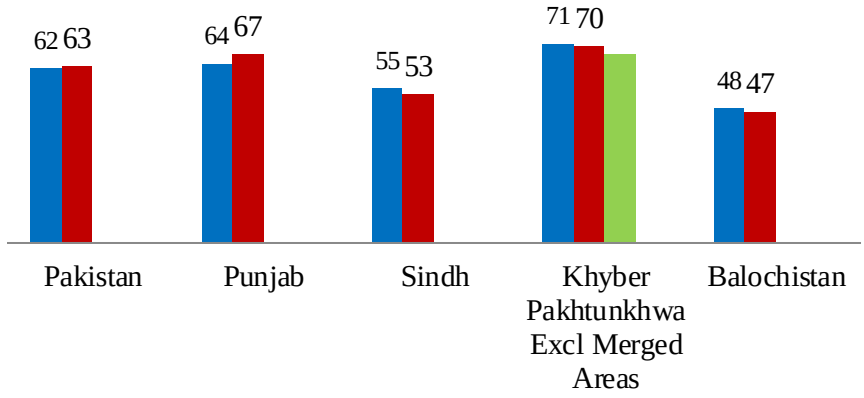

However, the district wise comparison reveals that in Punjab district Bhakkar with 81 percent is at top while Lahore with 38 percent is at bottom. In Sindh, district Sujawal with 97 percent is at top while Korangi with 20 percent is at bottom. In Khyber Pakhtunkhwa district Kohistan with 98 percent is at top while

Peshawar is at bottom with 47 percent. In Balochistan, district Awaran and Shaheed Sikandarabad is at top with 100 percent however Quetta with 69 percent is at bottom.

2.4.4 Gross Enrolment Ratio at Middle (GER)

GER Middle age (11-13) increased to 63 percent in 2019-20 as compared to 62 percent in 2014-15. The regional comparison also shows declining trend in both urban and rural areas with 73 percent and 57 percent in 2019-20 as compared to 78 percent and 55 percent respectively. Furthermore, the provincial situation shows decreasing trend except Punjab whereas Khyber Pakhtunkhwa (Excluding Merged Areas) is at top with 70 percent in 2019-20 as compared to 71 percent in 2014-15 among all provinces followed by Punjab and Khyber Pakhtunkhwa (Including Merged Areas) with 67 percent, however, Balochistan with 47 percent is at bottom in 2019-20 as compared to 48 percent in 2014-15. The District wise comparison shows that Jhelum in Punjab with 99 percent, Korangi in Sindh with 86 percent, Chitral and Haripur in Khyber Pakhtunkhwa with 91 percent and Nushki in Balochistan with 85 percent are the top ranked districts while Muzaffargarh and Rajanpur with 42 percent, Thatta with 18 percent, Kohistan with 31 percent and Shaheed Sikandarabad with 7 percent are the bottom districts in their respective provinces, Table 2.10-a.

Figure-8 GER Middle age (11-13) by Provinces

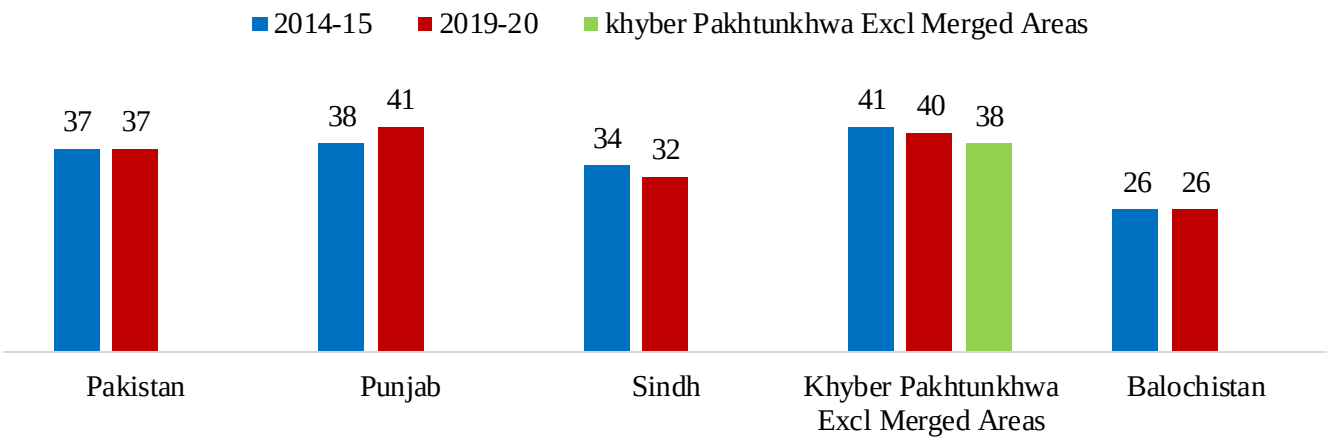

The GER for the middle level age 10-12, for Pakistan as a whole increased to 56 percent in 2019-20 as compared to 55 percent in 2014-15. It shows almost the same pattern for provinces which followed in Table 2.10 b.

2.4.5 Net Enrolment Rate at Middle (NER)

The Net Enrolment Rate (NER) Middle age (11-13) is stagnant at 37 percent in 2019-20 as in 2014-15 at National level. While the provincial comparison shows that Punjab is at top with 41 percent in 2019-20 as compared 38 percent in 2014-15 followed by Khyber Pakhtunkhwa (Excluding Merged Areas) with 40 percent in 2019-20 as compared to 41 percent in 2014-15 and Sindh with 32 percent in 2019-20 as compared

to 34 percent in 2014-15, however, Balochistan is at bottom and remain stagnant at 26 percent in 2019-20 and 2014-15, Table 2.11-a

Figure-9 NER Middle (11-13) by Province

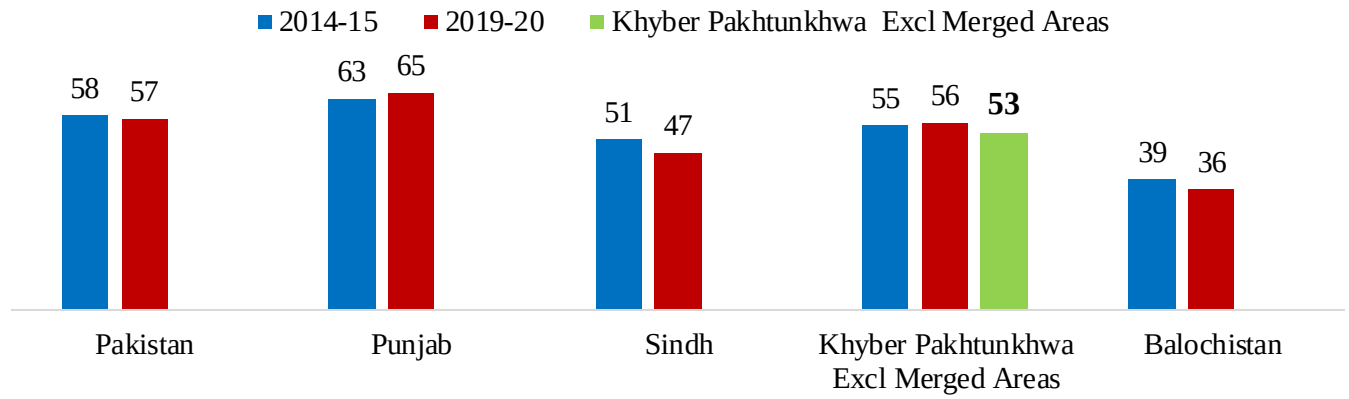

District wise comparison reveals that Jhelum in Punjab with 63 percent, Korangi in Sindh with 52 percent, Haripur, Chitral and Karak in KP with 55 percent and Mastung in Balochistan with 53 percent are the top most districts while Muzaffargarh with 24 percent, Thatta with 9 percent, Kohistan with 11 percent and Shaheed Sikandarabad with 3 percent are the lowest districts in their respective provinces.

The Net Enrolment Rate at Middle age (10-12) by Province and districts at National level shows declining trend with 21 percent in 2019-20 as compared to 22 percent in 2014-15. Provincial comparison shows that Punjab is at top with 25 percent followed by Khyber Pakhtunkhwa with 19 percent however, Balochistan is at bottom with 15 percent. District wise comparison reveals that Jhelum in Punjab with 38 percent, Korangi in Sindh with 30 percent, Haripur in KP with 32 percent and Duki in Balochistan with 32 percent are the top most districts while Muzaffargarh with 15 percent, Thatta with 4 percent, Kohistan with 4 percent and Shaheed Sikandarabad with 2 percent are the lowest districts in their respective provinces.

2.4.6. Gross Enrolment Ratio at Matric (GER)

The Gross Enrolment Rate at Matric (GER), age (14-15), declines to 57 percent in 2019-20 as compared to 58 percent in 2014-15 at national level. However, regionwise comparison shows declining trend in urban areas with 76 percent in 2019-20 as compared to 78 percent in 2014-15 while rural areas remains stagnant with 47 percent in 2019-20 as in 2014-15. Further, Punjab with 65 percent is the top most among all provinces in 2019-20 as compared to 63 percent in 2014-15, followed by Khyber Pakhtunkhwa including merged area with 53 percent in 2019-20 as compared to 55 percent in 2014-15. However, Khyber Pakhtunkhwa excluding merged areas is 56 percent and Balochistan is at bottom with 36 percent in 2019-20 as compared to 39 percent in 2014-15, Table 2.12-a

Figure 10 GER Matric (14-15)

District wise comparison reveals that Chakwal in Punjab with 95 percent is the top district in GER Matric age (14-15) while Muzaffargarh with 35 percent is at bottom. In Sindh Karachi East & Korangi with 87 percent is the top most district however, Thatta with 14 percent is at bottom. In KP, Chitral with 96 percent is the top district and Kohistan with 16 percent is at bottom. In addition, District Nushki in Balochistan with 74 percent is at top in GER at Matric age (14-15) and Shaheed Sikandarabad with 2 percent is at bottom.

Figure 11-Top districts in GER Matric age (14-15)

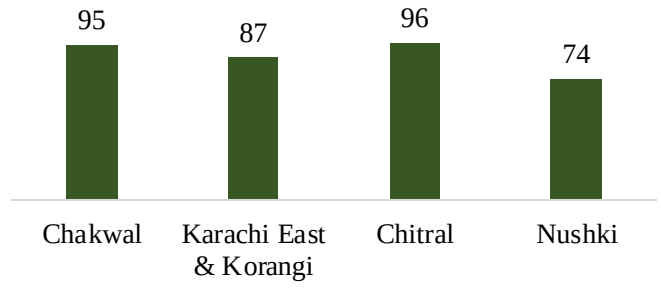

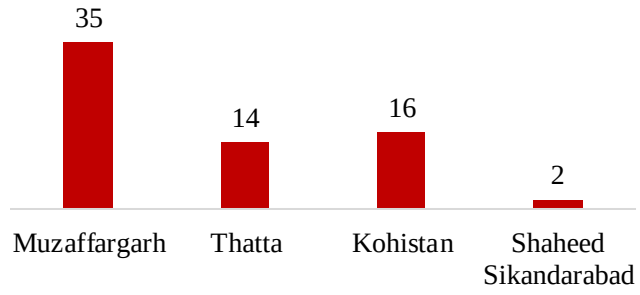

Figure 11-Bottom districts in GER Matric age (14-15)

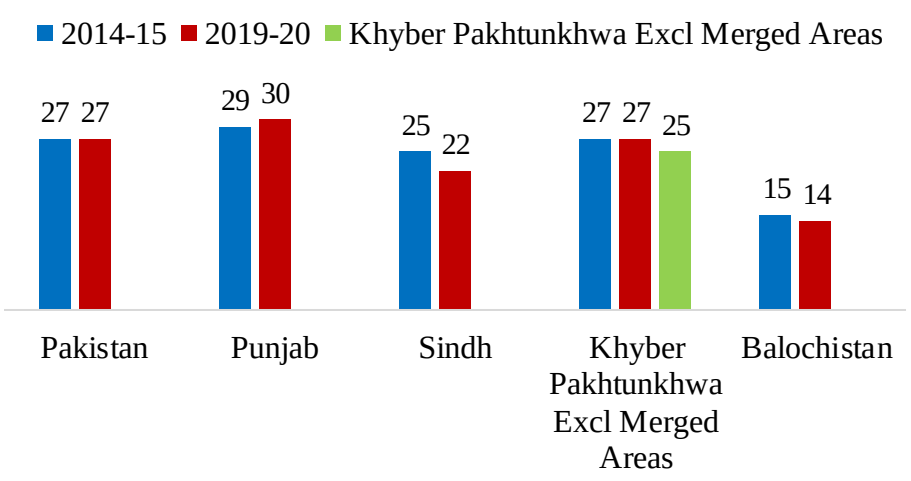

The Gross Enrolment ratio at Matric Level (Age 13-14) by Province and district at National level shows decline with 58 percent in 2019-20 as compared to 59 percent in 2014-15. However, the same pattern is observed in urban and rural areas at national level. Furthermore, the provincial and district comparison also shows same pattern as discussed above, Table 2.12 b.

2.4.7 Net Enrolment Rate (NER)

The Net Enrolment Rate (**NER**) Matric age (14-15) remains stagnant at 27 percent in 2019-20 as in 2014-15 at National level. However, regionwise comparison shows declining trend in urban areas with 38 percent in 2019-20 as compared to 35 percent in 2014-15, while slight increase is observed in rural areas with 22 percent in 2019-20 as compared to 21 percent in 2014-15. Additionally, Punjab with 30 percent is the top most among all provinces and showing declining trend in 2019-20 as compared to 29 percent in 2014-15, followed by Khyber Pakhtunkhwa (Excluding Merged Areas) with 27 percent which remains stagnant in 2019-20 and 2014-15. Sindh also shows declining trend with 22 percent in 2019-20 as compared to 25 percent in 2014-15, while, Balochistan is at bottom with 14 percent in 2019-20 as compared to 15 percent in 2014-15. District wise comparison reveals that Chakwal in Punjab with 49 percent, Korangi in Sindh with 40 percent, Haripur in KP with 44 percent and Mastung in Balochistan with 28 percent are the highest districts, while Muzaffargarh with 14 percent, Thatta with 3 percent, Kohistan with 4 percent and Shaheed Sikandarabad and Sherani with 0 percent are the lowest districts in their respective provinces, Table 2.13-a

Figure-12 NER Matric(14-15) by Province

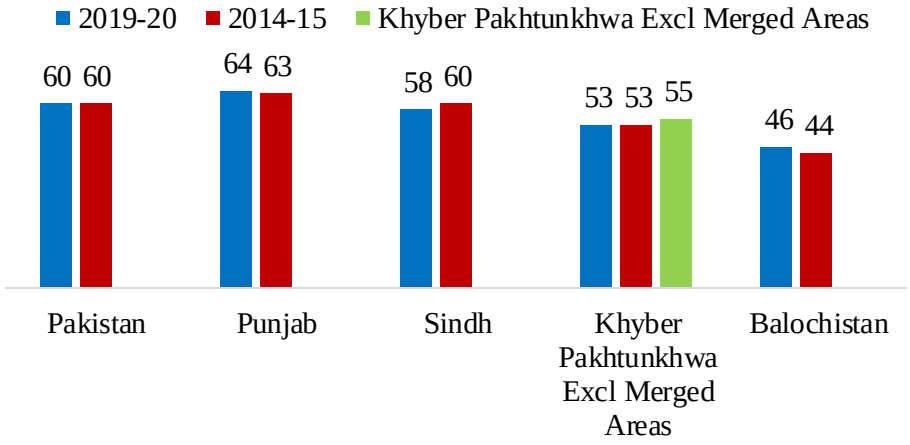

The Net Enrolment Rate at Matric age (13-14) shows decline with 13 percent in 2019-20 as compared to 14 percent in 2014-15 at National level. Further, the provincial and district wise comparison show the same pattern and no changes is observed when comparing with different age group.

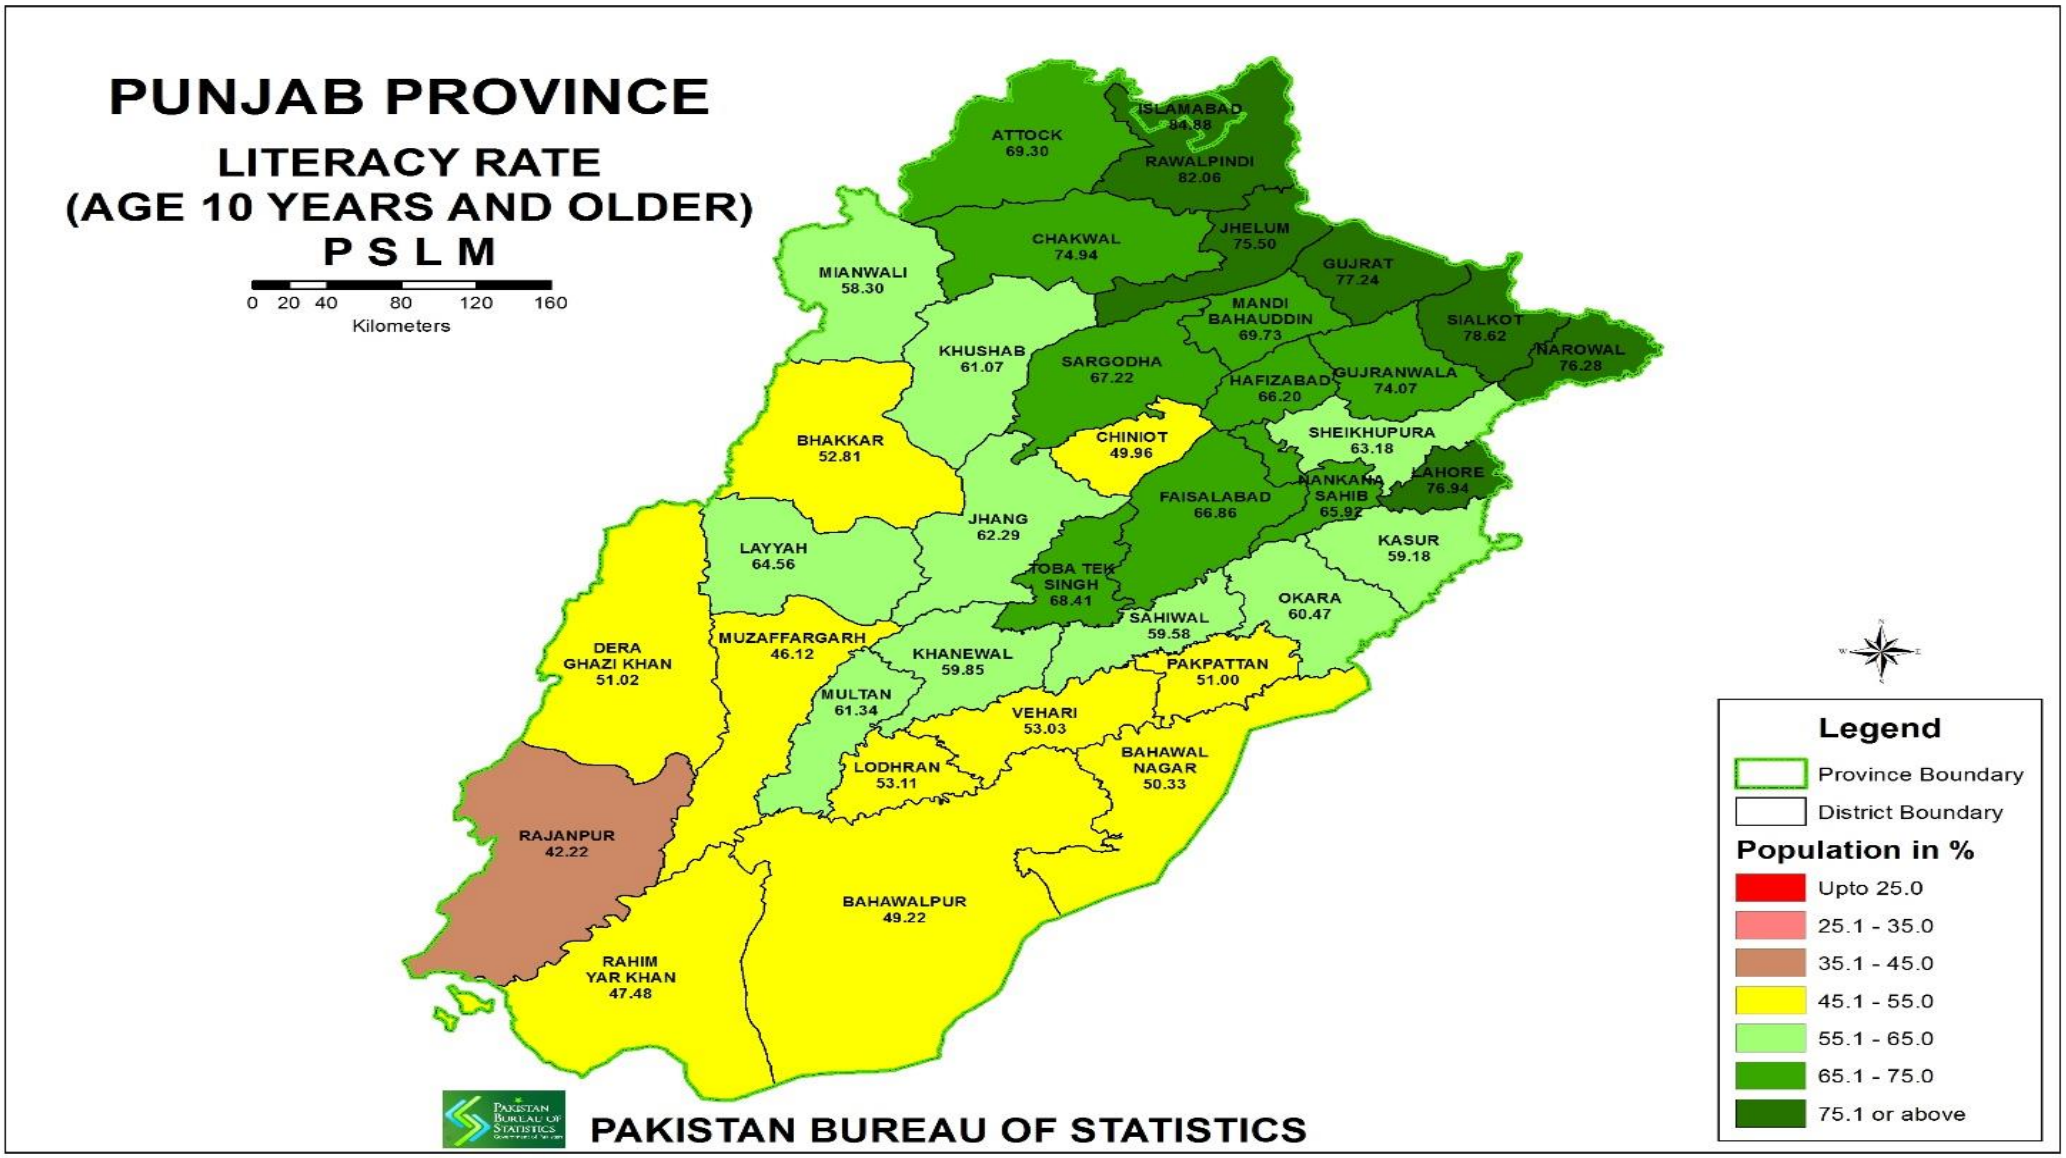

2.5 Literacy

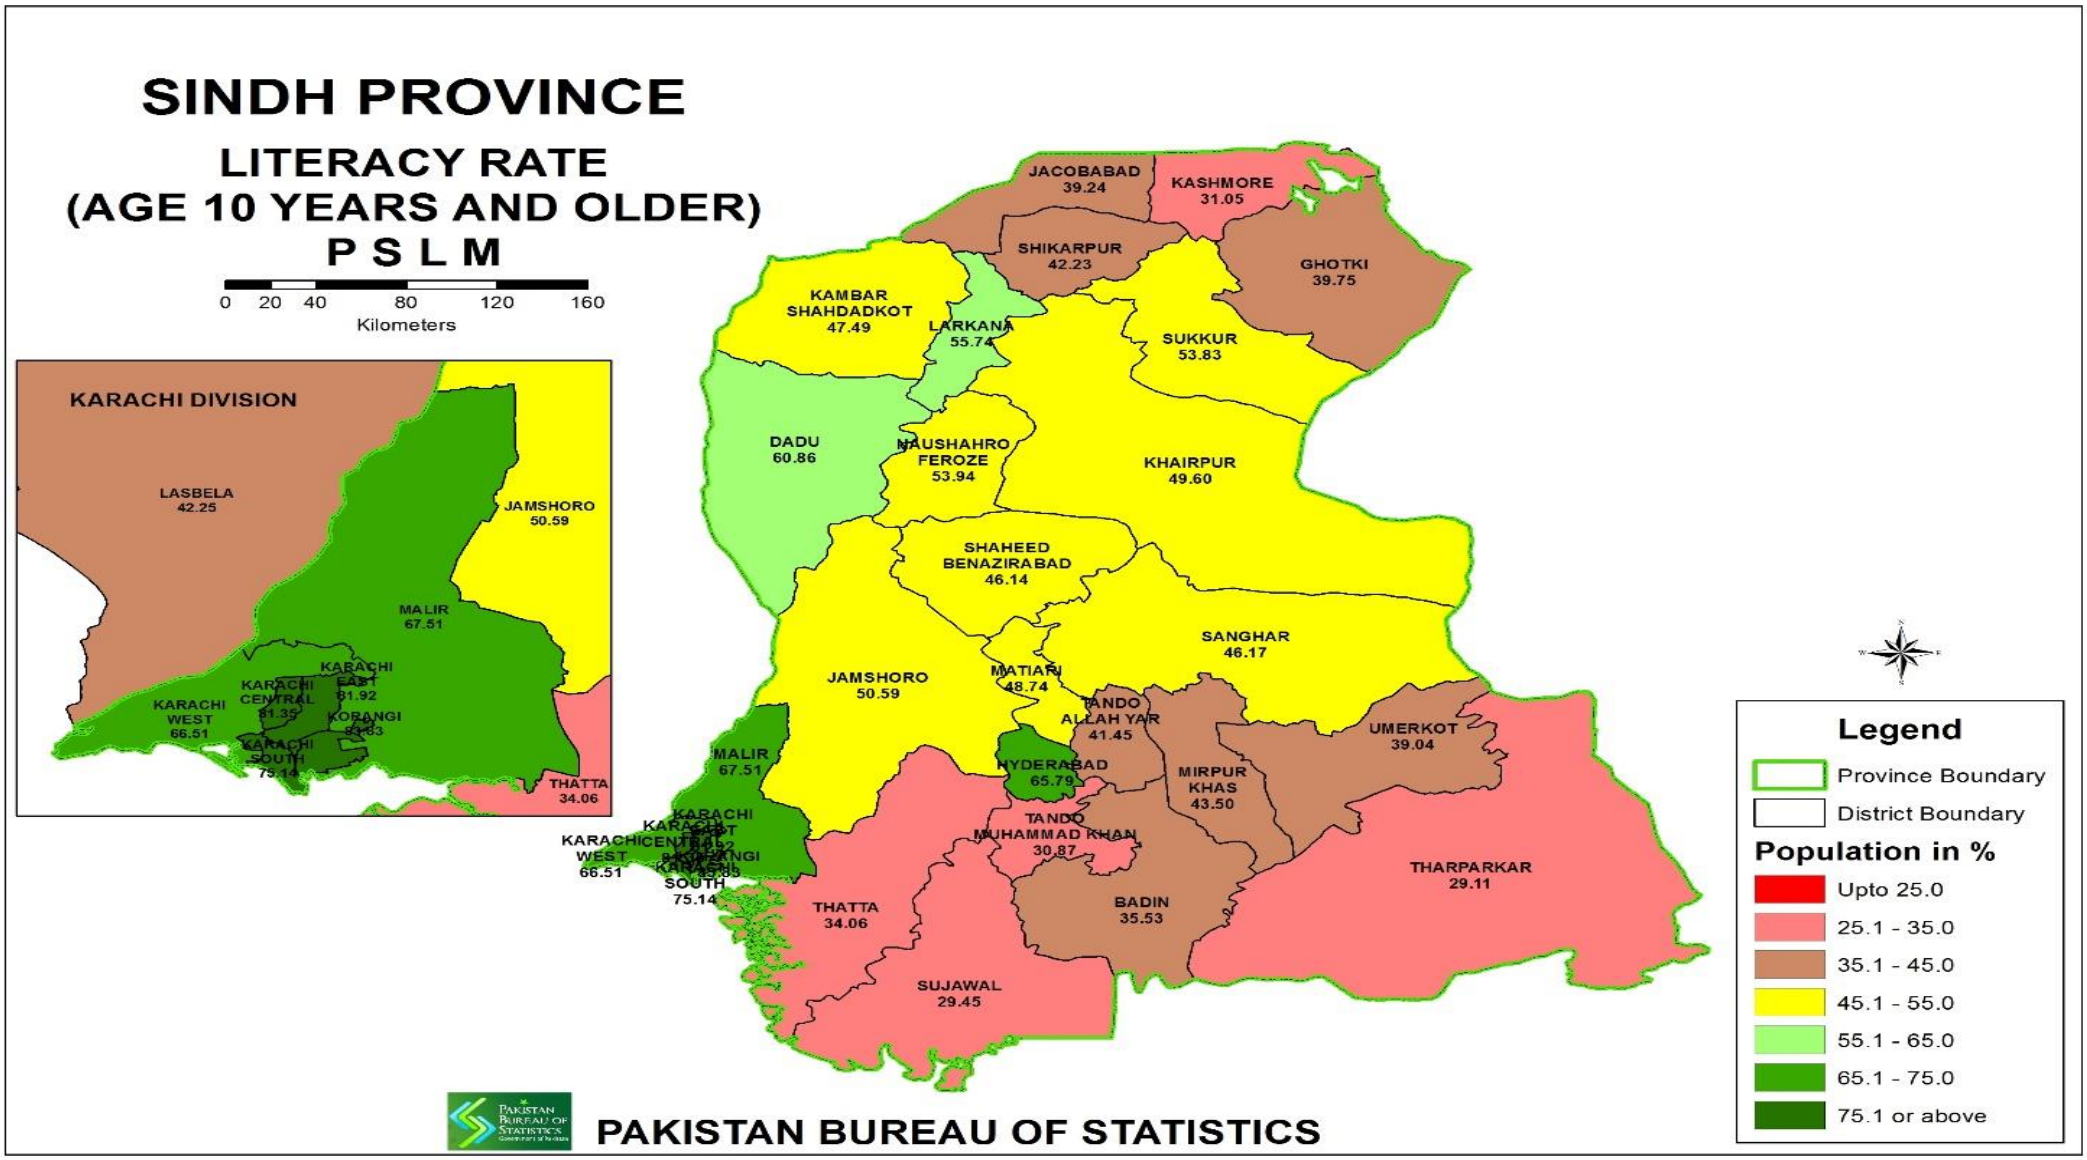

Literacy is an important indicator of education and it has significant impact on development of the country. The literacy rate of population 10 years and older at National level remains stagnant in 2019-20 with 60 percent as in 2014-15. Furthermore, Literacy rate shows declining trend in urban areas with 74 percent in 2019-20 as compared to 76 percent, while in rural areas literacy has increased to 52 percent in 2019-20 as compared to 51 percent in 2014-15. Similarly, the overall males have higher literacy rate with 70 percent as compared to females with 49 percent. Moreover, the provincial picture depicts that Punjab has the highest literacy rate with 64 percent among all provinces in 2019-20 as compared to 63 percent in 2014-15,

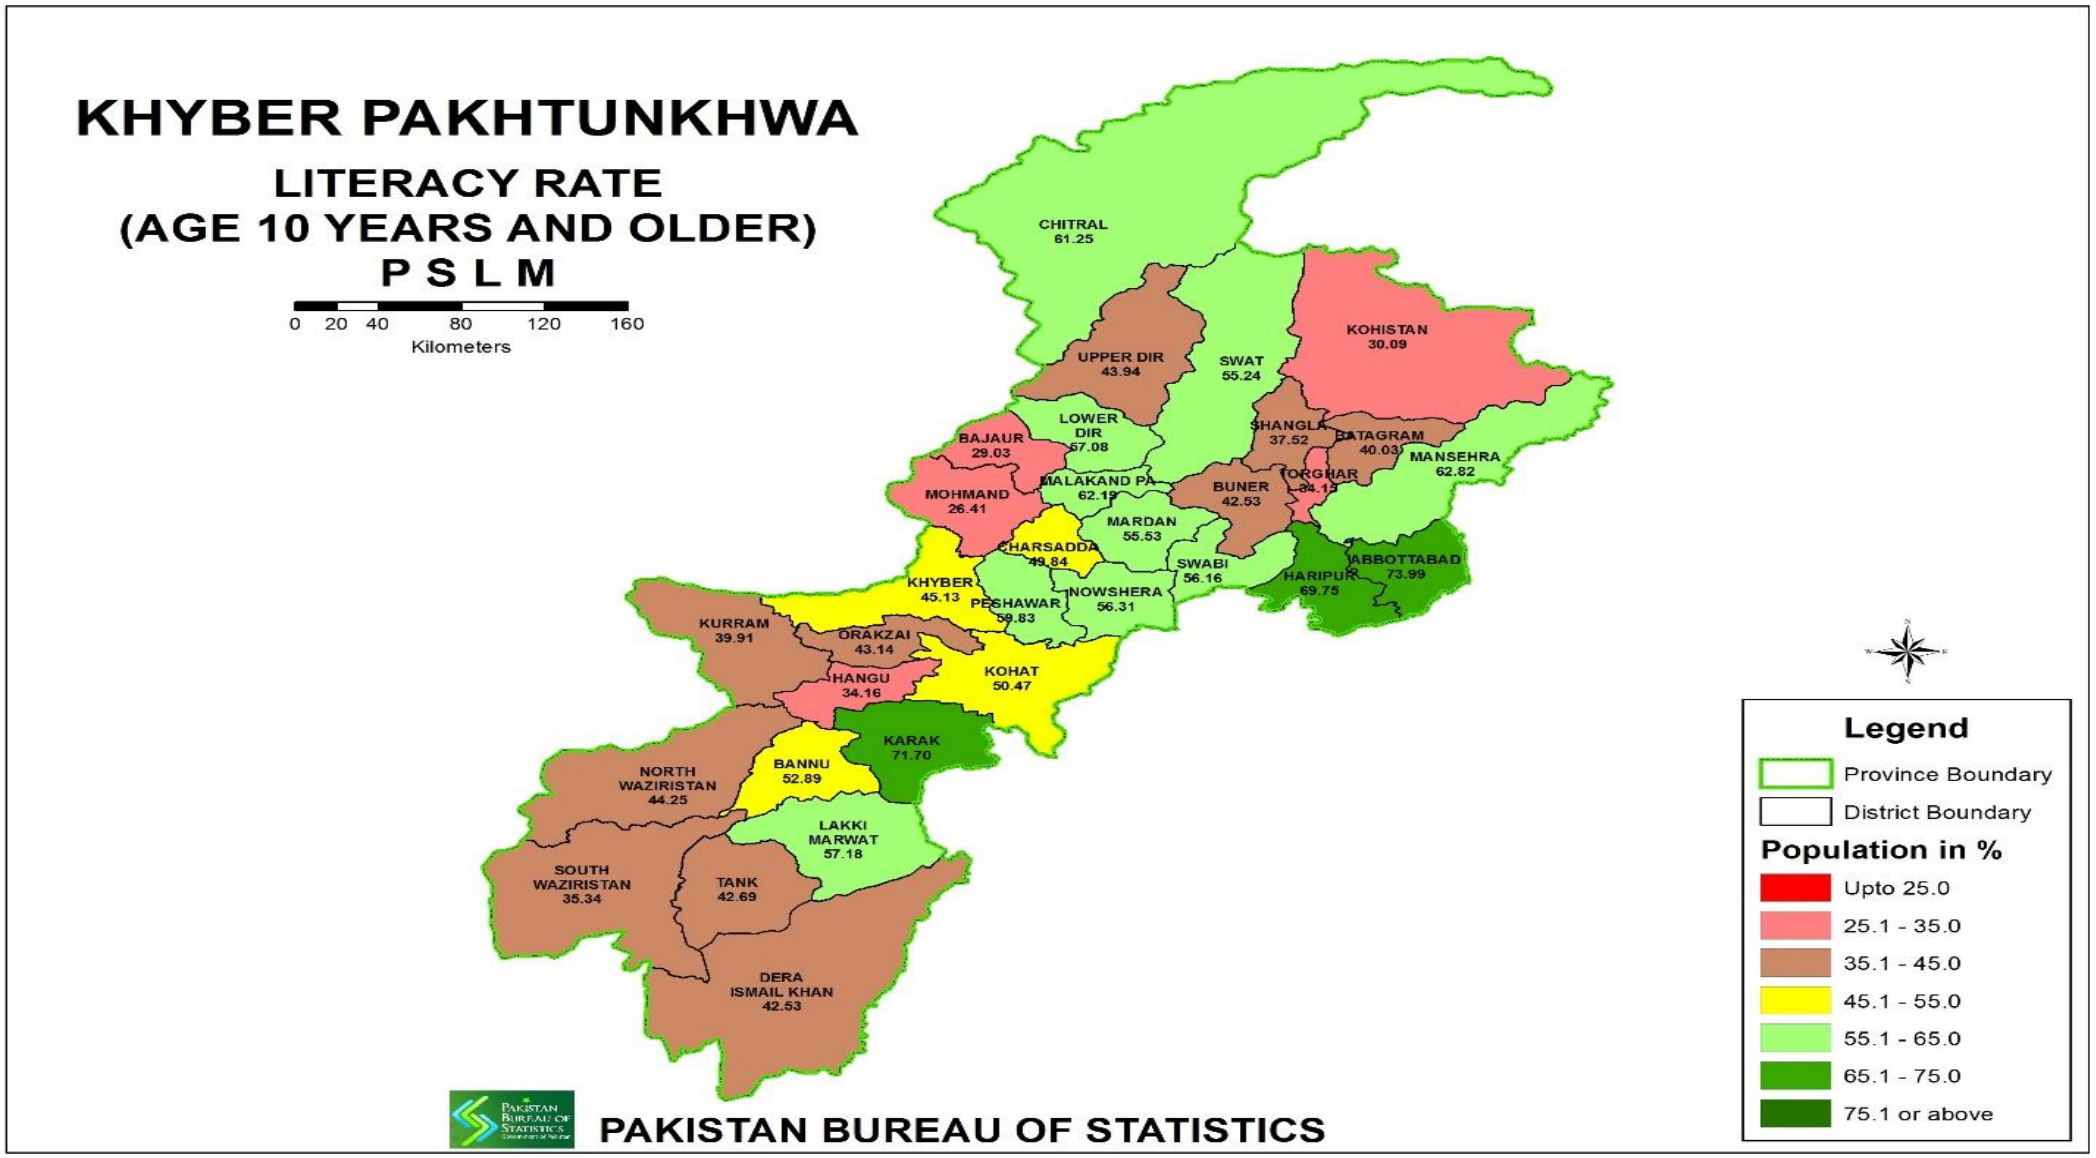

followed by Sindh with 58 percent in 2019-20 as compared to 60 percent in 2014-15, while Balochistan has the lowest literacy with 46 percent in 2019-20 as compared to 44 percent in 2014-15. Therefore, it is pertinent to mentioned here that Punjab and Balochistan have increasing trend in Literacy during the period of 2019-20 whereas Sindh and Khyber Pakhtunkhwa shows decreasing trend during the period of 2019-20. Additionally, the literacy rate of capital city Islamabad is the highest rate in country with 85 percent. However, district wise comparison reveals that Rawalpindi with 82 percent Korangi with 84 percent, Abbottabad with 74 percent and Quetta with 64 percent is the top most districts in their respective provinces, while Rajanpur with 42 percent, Tharparkar with 29 percent, Mohmand with 26 percent and Dera Bugti and Khuzdar with 22 percent are lowest ranked district in their respective provinces, Table 2.14.

PAKISTAN BUREAU OF STATISTICS

2.5.1 Youth Literacy age (15-24)

The country's **Youth Literacy** is calculated from the age 15-24 years. For the first time youth literacy is being calculated in PSLM District Level Survey 2019-20. According to the PSLM District Level Survey 2019-20, the results reveals that Youth Literacy is 72 percent at National level and this proportion is higher in urban areas with 84 percent than in rural areas with 65 percent. However, Youth literacy is higher in males with 79 percent than in females with 65 percent. Similarly, Punjab is at top among all provinces in Youth literacy with 78 percent, followed by Khyber Pakhtunkhwa with 67 percent, while Balochistan is at lowest with 57 percent. Furthermore, the Youth literacy in Islamabad is reported 93 percent Table 2.14-c.

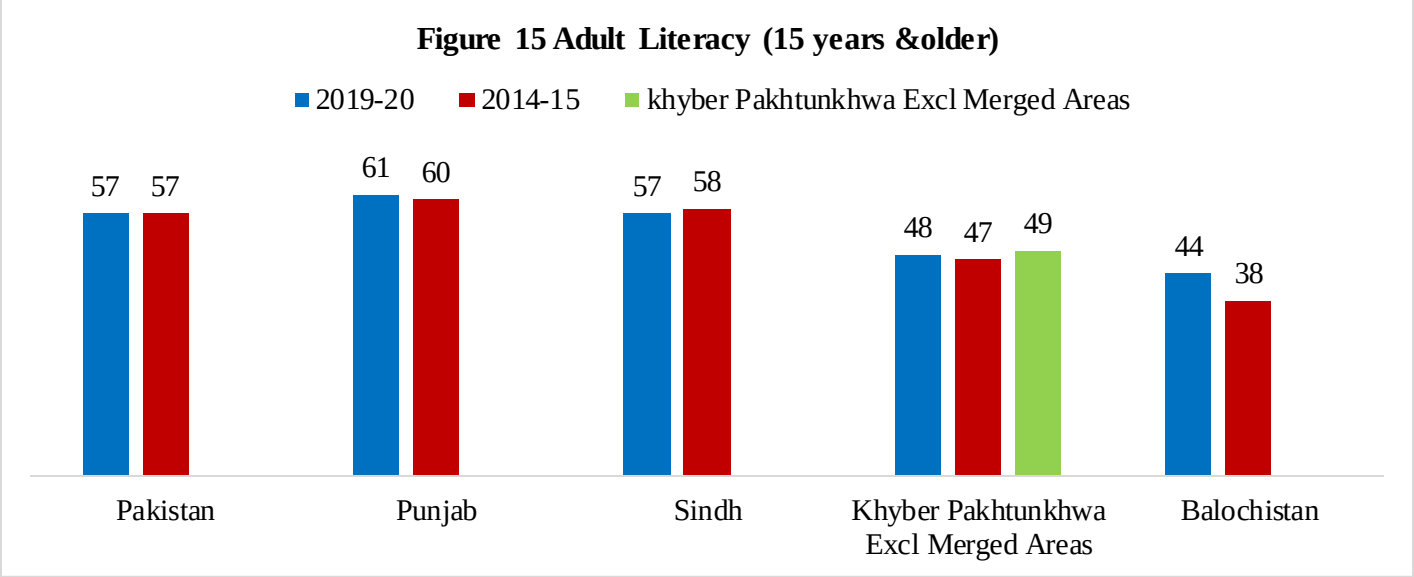

Figure 14 Youth Literacy by Region

However, District wise comparison reveals that Narowal and Sialkot with 93 percent, Korangi with 92 percent, Abbottabad with 95 percent, Pishin and Quetta with 76 percent are at top in their respective provinces, while Rajanpur with 52 percent, Kashmore with 31 percent, Mohmand with 30 percent and Shaheed Sikandarabad with 11 percent are at bottom in their respective provinces.

2.5.2 Adult literacy

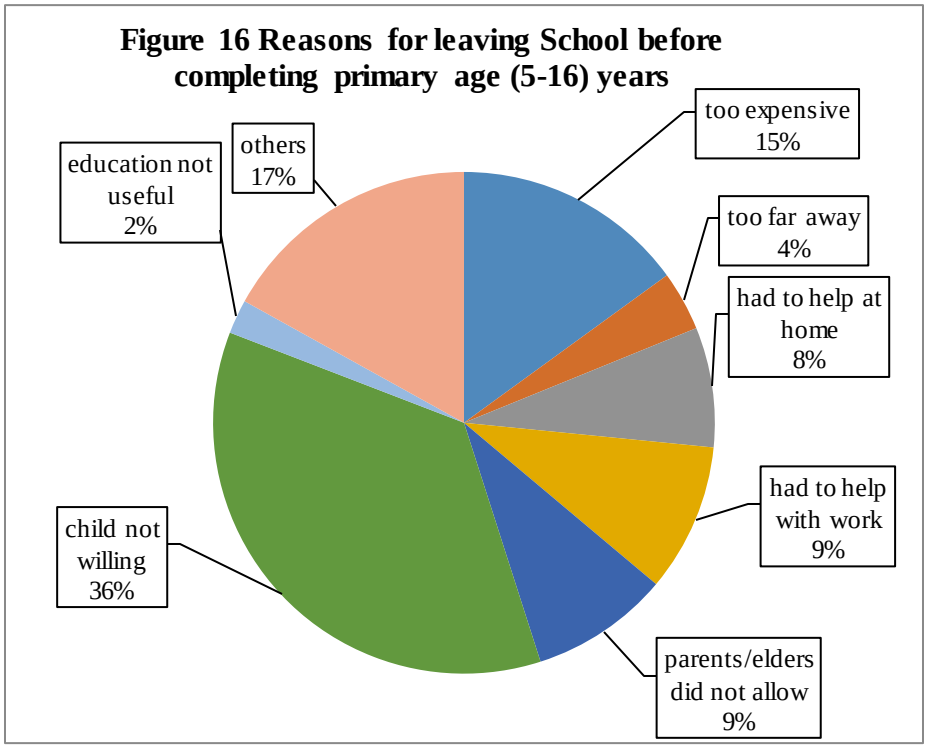

Adult Literacy remains stagnant at 57 percent in 2019-20 as in 2014-15. The regional comparison shows 2 percent decline in urban areas with 72 percent in 2019-20 as compared to 74 percent in 2014-15. This percentage inclines in rural areas with 48 percent in 2019-20 as compared to 46 percent in 2014-15. Further, gender pattern depicts that percentage of males are higher with 68 percent than in females with 46 percent. Similarly, provincial comparison shows that Punjab is at top among all provinces with 61 percent in 2019-20 as compared to 60 percent in 2014-15, followed by Sindh with 57 percent as compared to 58 percent in 2014-15 and Khyber Pakhtunkhwa has shown increasing trend with 49 percent during the period 2019-20 as compared to 47 percent in 2014-15. However, Balochistan is at bottom with 44 percent in 2019-20 as compared to 38 percent in 2014-15, Table 2.14-b.

The adult literacy in capital city Islamabad is reported 84 percent. Similarly, district wise comparison reveals that Rawalpindi with 80 percent, Korangi with 83 percent, Abbottabad with 71 percent and Quetta with 63 percent are the top most districts in their respective provinces. However, Rajanpur with 37 percent, Tharparkar with 26 percent, Mohmand with 20 percent and Shaheed Sikandarabad with 11 percent are at bottom in their respective provinces.

2.6 Reasons for Leaving School before completing Primary level

This indicator a Reason for Leaving School before completing Primary level was not part of the PSLM District Level Surveys but for the first time, it is being calculated/data provided in PSLM District Level Survey 2019-20. According to the PSLM District Level Survey 2019-20, the results show that most cited reason for leaving school before completing primary level aged (5-16) years is "child not willing" with 36 percent as shown in figure 16. Secondly, the second highest reported reason for leaving school before completing primary level is "too expensive" with 15 percent. Thirdly, 10 percent population reported that they had to help with work and 9 percent of the

population reported reason for leaving school before completing Primary level is parents did not approve. Fourthly, "Too far away" and "education not useful" are the least reported reasons with 4 and 2 percent respectively.

3-INFORMATION COMMUNICATION TECHNOLOGY

3.1 Introduction

Information and Communication Technologies (ICT) are so deeply rooted in developed countries. Most economic and financial sectors (from banking to the manufacturing industry, from logistics to air traffic) would nearly collapse if these systems stopped. The developing countries like Pakistan will more easily incorporate into the current economic environment, which is heading towards the global village, if they exploit at their best the opportunities offered by the new technologies. Pakistan will be able to develop its economic and industrial system in a sustainable way, to foster democracy, to identify solutions for environmental problems locally and at a world-wide level, to improve their health care system, by exchange of data and information.

ICT gives new exceptional opportunities to effectively fight against poverty in the developing countries: there are already several examples that show how ICT can support the poor in business development, making it easier to access information and new markets. ICT is also an effective tool to foster poor empowerment, facilitating access to education and health, helping improve the environment.

In the past ICT was generally considered a luxury good, but now world is constantly evolving and digital age has transformed the way people communicate, seek help, access information and learn. ICT has an impact on nearly every aspect of our lives i.e. from working to social life, learning to play. Young generation has now-a-days access to internet through a variety of means such as computers, laptops, tablets and mobile phones. Government of Pakistan is committed to provide the internet facility to the citizens of Pakistan. Currently Pakistan Telecommunication Policy 2015 and Broad Band Policy 2013 are applicable. National Broad Band Policy 2021 has been formulated/ drafted. Policy will play an important role in the achievement of the targets set in the Digital Pakistan Policy.

By considering the importance of ICT sector, a separate individual level module has been added in PSLM Questionnaire for reporting and monitoring of the progress of ICT development in Pakistan, it produces variety of key indicators for all provinces with Urban/Rural breakdown and is also one of the major sources for monitoring of Sustainable Development Goal (SDG's). Household Characteristics module of PSLM /HIES survey has also been revised for monitoring and reporting of Information Communication facilities at household level.

Three SDGs indictors:

4.4.1: Proportion of Population with information and communications technology (ICT) skills, by type of skill. Disaggregation by gender.

5. b. 1: Proportion of individuals who own a mobile telephone, by sex

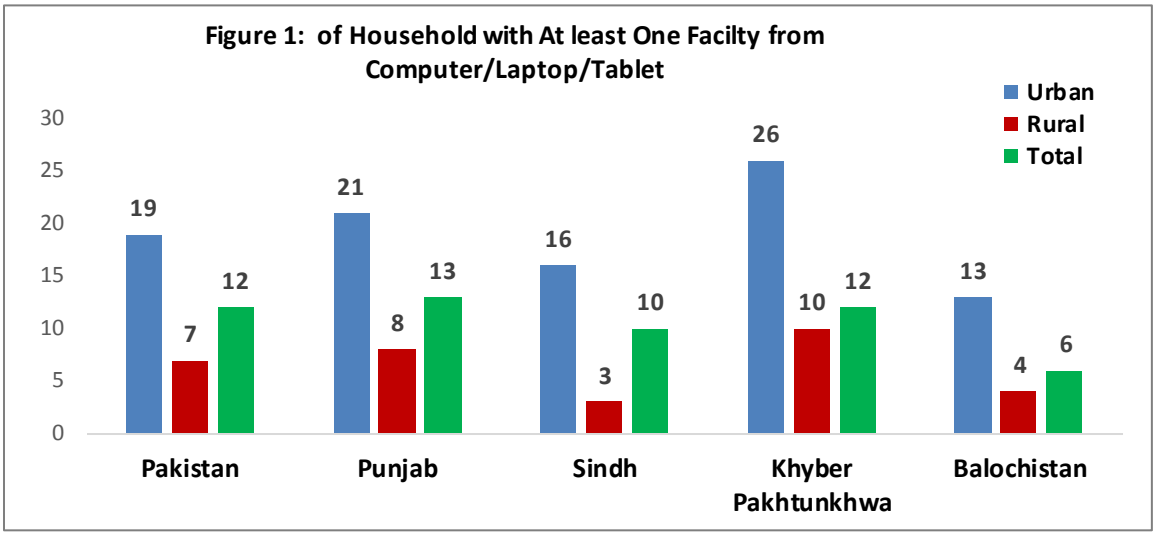

17.8.1: Proportion of individuals using the Internet.

Is being reported through PSLM 2019-20, disaggregation by age, gender, educational level. Labour. Residence are included and reported through PSLM 2019-20. International Telecommunication Union (ITU) is custodian of ICT indicators to compare information for the comparability purpose throughout the globe; ITU also required data on Information Communication indicators for calculation of Information Development Index (IDI). Hence, this chapter will mainly cover indicators on household's level with the facility of computer, Laptop, Tablet, mobile and Internet for Individuals who are 10 years and older using Computer, ICT Skills, internet and ownership & usage of Mobile/ Smart phone.

3.2 Percentage of Household with Computer, Mobile and Internet

The importance of ICT is considerable in all sectors and become an essential part of life for many people, World is becoming global village. Households who are having at least one facility such as Computer, Laptop and Tablet are around 12 percent overall. Percentage is higher in urban with 19 percent areas as compared to rural areas with 7 percent. (Figure 1, Table 3.1)

Punjab at top with 13 percent household having at least one facility such as computer/Laptop/Tablet, 22 percent in urban area and 8 percent in rural areas and Balochistan is at bottom with 6 percent whereas 13 percent in urban and only 1 percent in rural households reported to use any of the facility.

In Islamabad 40 percent of household reported having at least one facility such as computer/Laptop/Tablet. In Punjab, Lahore with 24 percent at top and Rajanpur at is at bottom with 3 percent. In Sindh, Karachi East at top with 33 percent and Tharparkar at bottom with 1 percent households. In Khyber Pakhtunkhwa, Peshawar with 25 percent at top and Kohistan at bottom with 2 percent having at least one

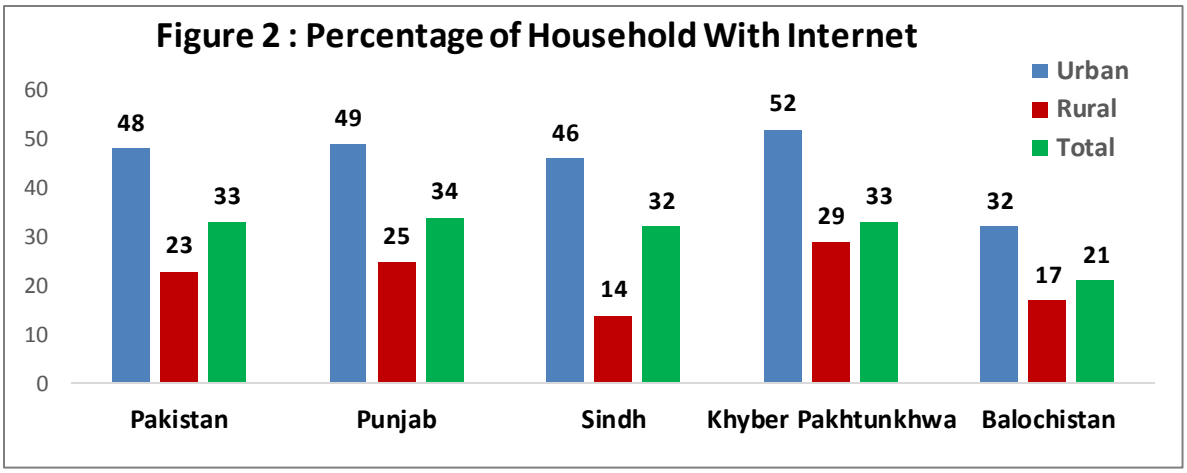

Facility such as computer/Laptop/Tablet, In Balochistan, Barkhan with 20 percent at top and Khuzdar at bottom with no household having at least one facility such as computer/Laptop/Tablet. (Table 3.1)

3.2.1 Mobile/Smart Phones: In modern era mobile phones become necessary for everyone. It provides the means to communicate with friends, family, co-workers, and indeed most of the world's population instantly. Modern cell Phones / Smart Phones are capable of much more than just sending and receiving phone calls or messages, these phones connect you with your family members by video calls and with sending picture. Now Smart Phones are taking place of PC, Laptops, camera and calculator etc., because modern smart phone have advance features with best performances. That's why demand is increasing world-wide day by day. In Pakistan almost 93 percent of household reported with Mobile/Smart Phone. Percentage is higher in urban area that is 96 percent as compared to 91 percent in rural areas. Khyber Pakhtunkhawa is at top with 95 percent of Household with facility of mobile phones, with 98 percent and 94 percent urban and rural areas respectively. In Punjab 94 percent, Balochistan with 92 percent and Sindh with 91 percent household reported with mobile/smart phone. (Table 3.1)

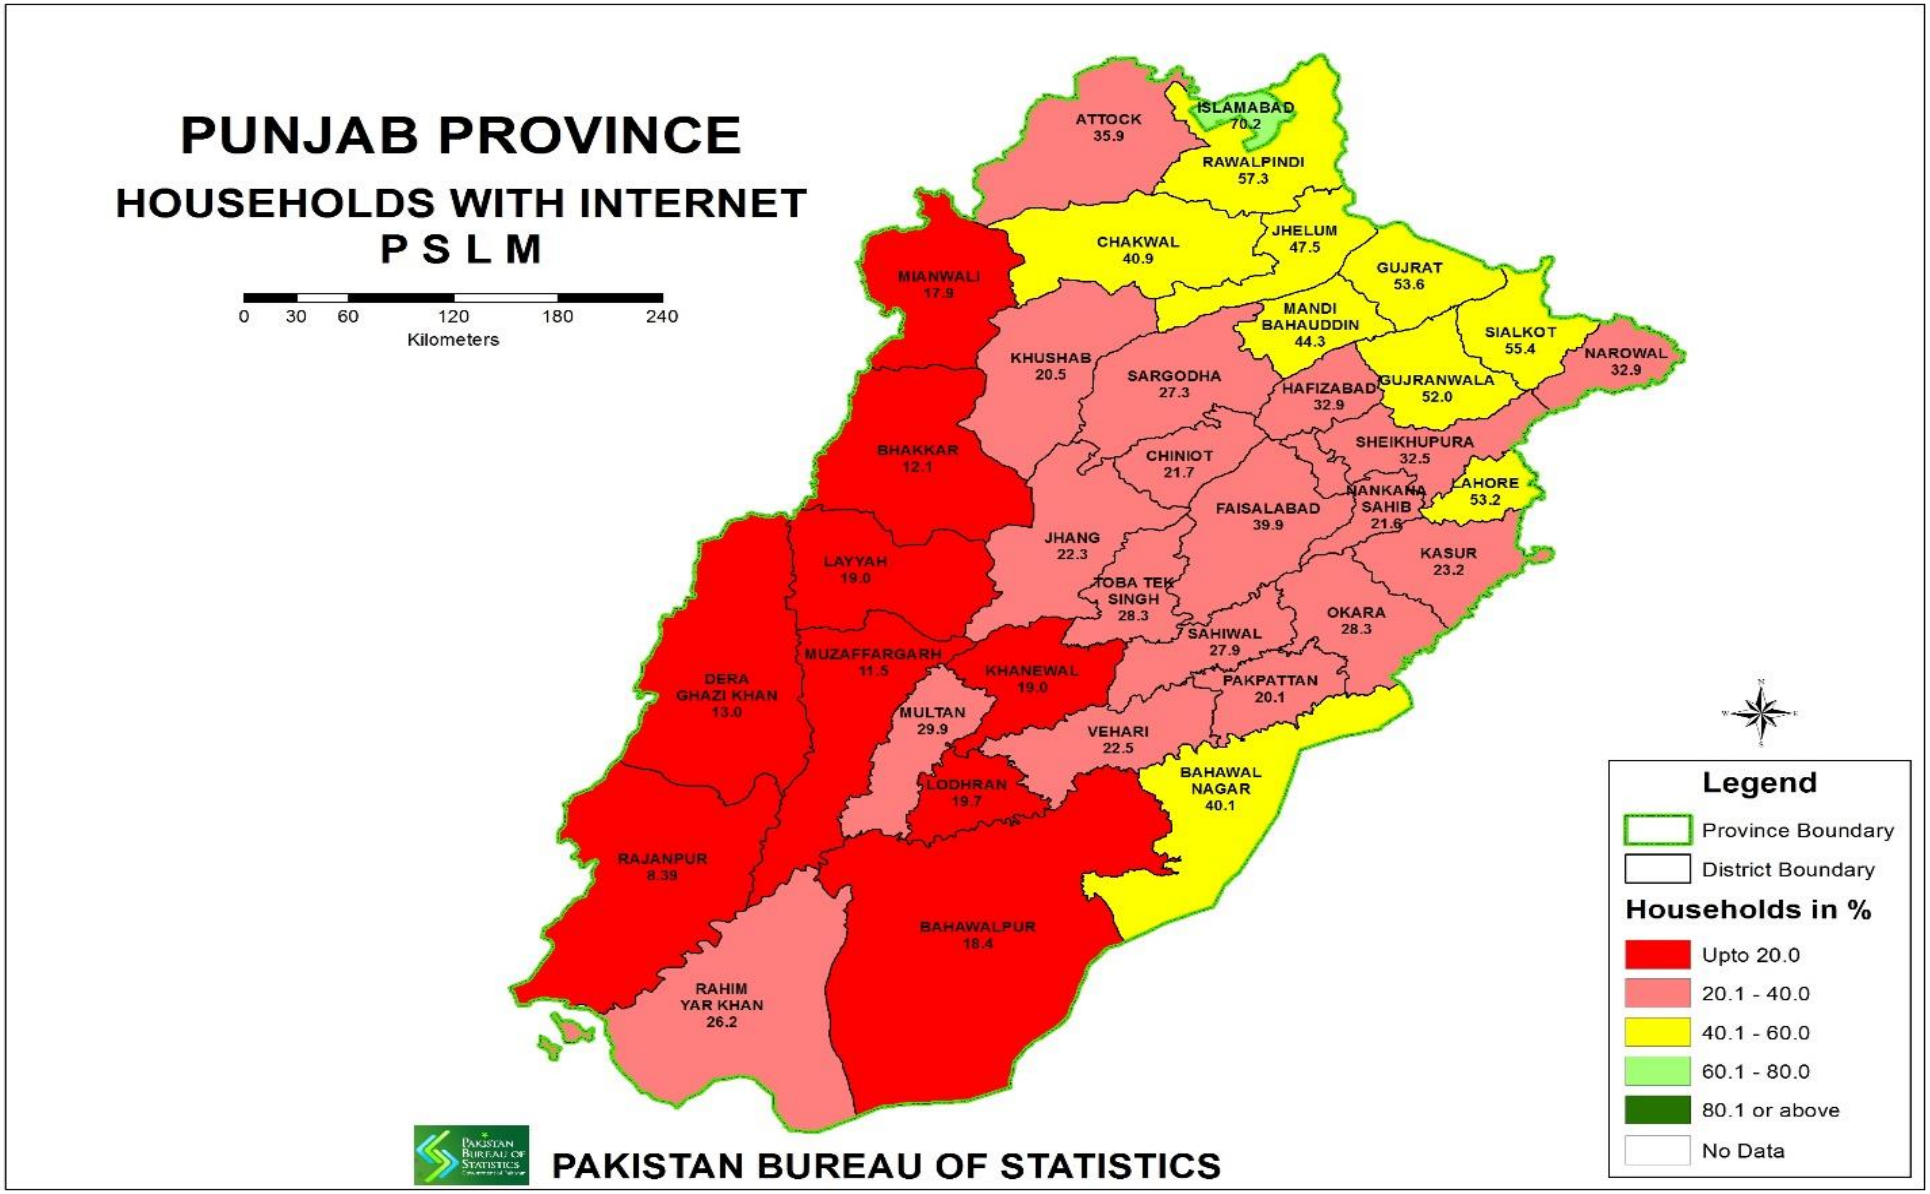

In Islamabad 99 percent of Household have mobile/smart phone facility, District wise situation reveal that, Layyah with 98 percent, Korangi with 99, Shangla with 99 percent and Pishin with 99 percent are top ranked districts with in their respective provinces. While Khanewal with 82, Dadu with 72 percent Mohammand and Khuzdar with 70 percent are bottom ranked districts with respect mobile/smart phones. (Table 3.1)

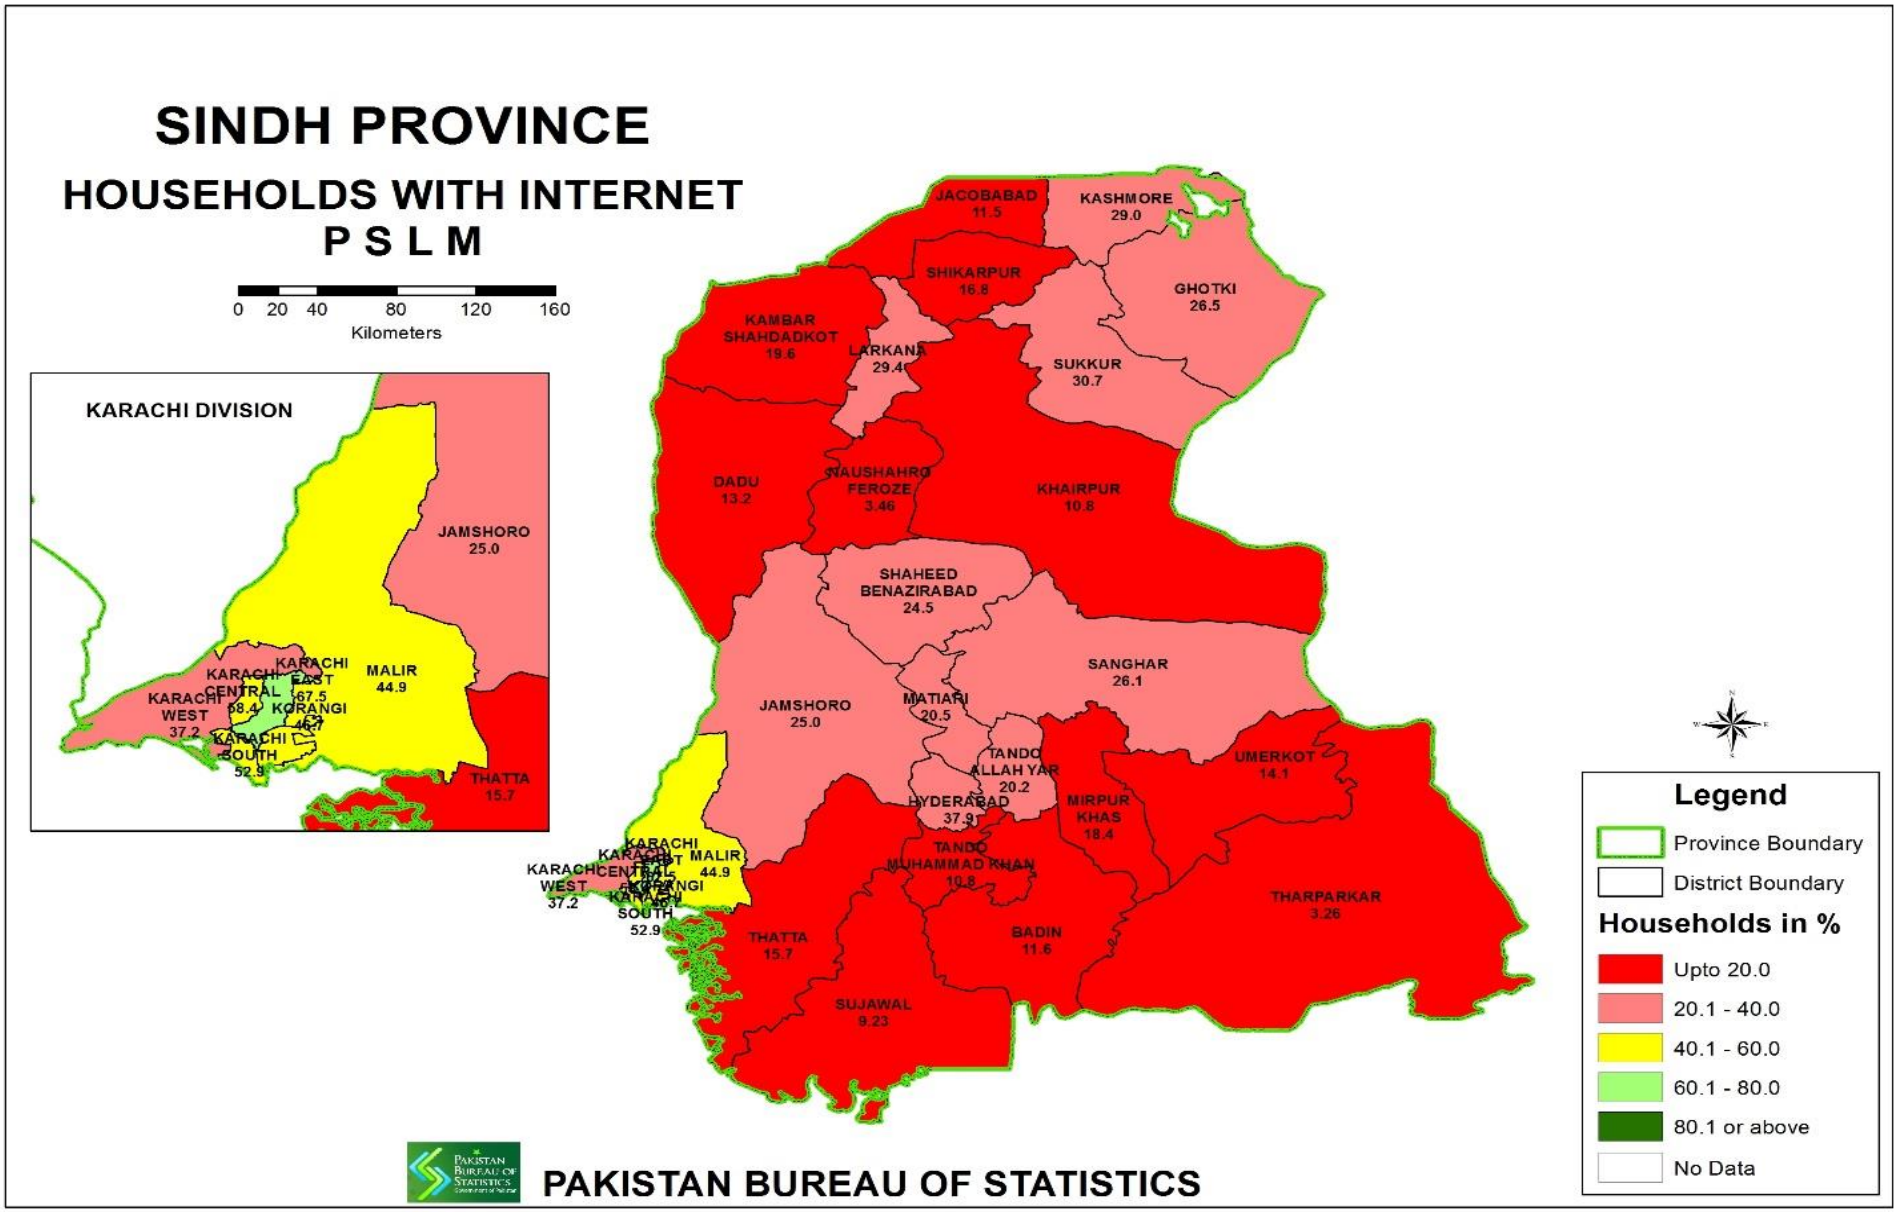

3.2.2 The Internet: Internet is a developing innovation that continually adds new highlights so peoples can be more advantageous with its utilization. Since the introduction of internet, current existence of individuals has gotten simple and familiar. From Bank, Healthcare, Business to economical different divisions is being profited with the web. They additionally empower you to send any data right away to anybody on the planet. With the Internet, online gatherings permit individuals to interface with one another, where they can share normal interests and talk about what they appreciate. Besides, you can impart your thoughts or perspectives to anybody by settling on an online video decision through applications like skype, line, and so forth.

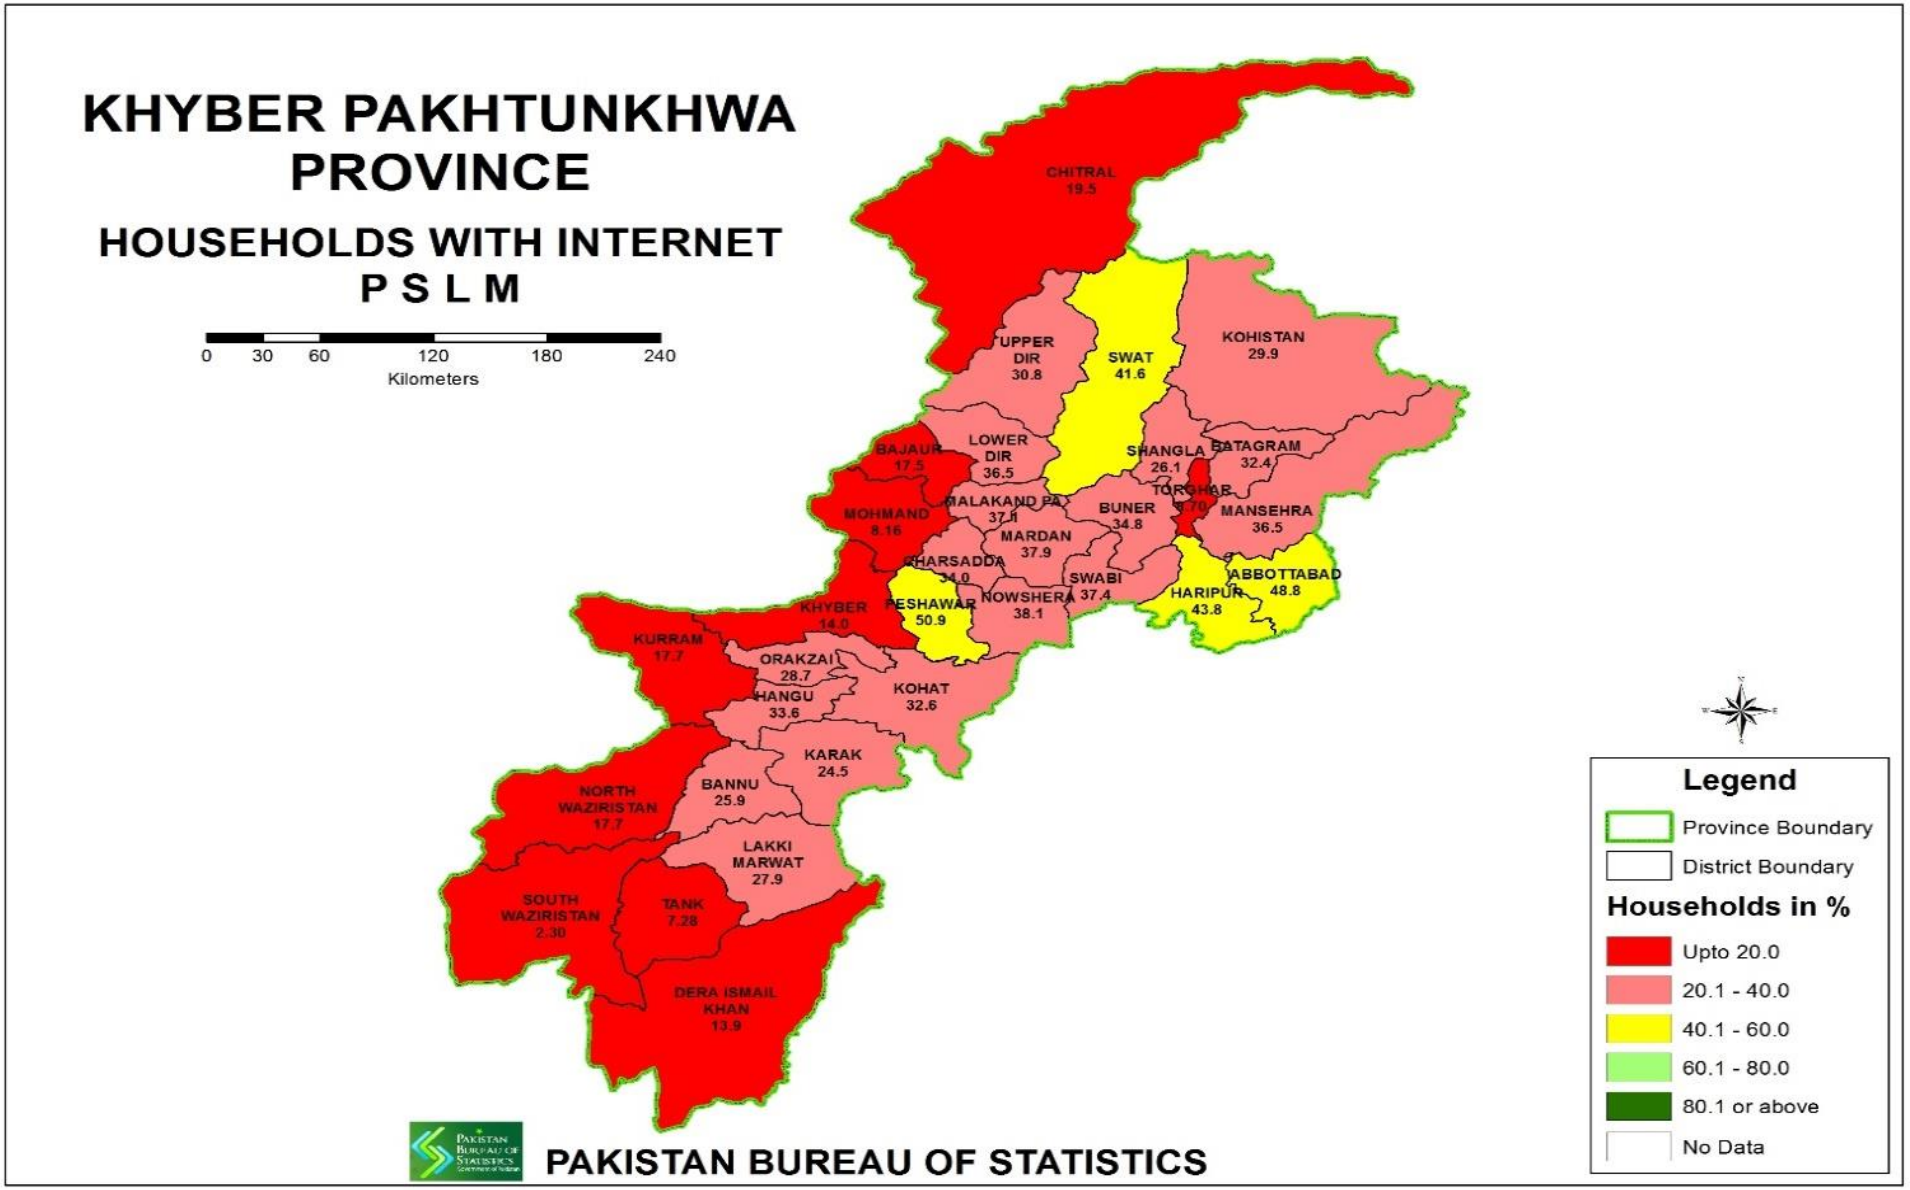

In PSLM 2019-20 Household were asked about internet facility and type of facility including cable / wired connections, wireless connections e.g. PTCL, Telecard, Wateen and Mobile Companies provided internet including; Mobilink, Telenor, U-fone etc. In Pakistan is 33 percent household reported internet facility at home. It is observed that this percentage is more in urban areas with 48 percent and 23 percent in rural areas. Punjab with 34 percent have highest household who have access to internet facility, whereas regional gap has been observed with 50 percent urban household and 25 percent rural household with internet facility. Khyber Pakhtunkhwa with 33 percent, followed by Sindh with 32 percent and only 21 percent households of Balochistan reported the access to facility of Internet. (Figure 2)

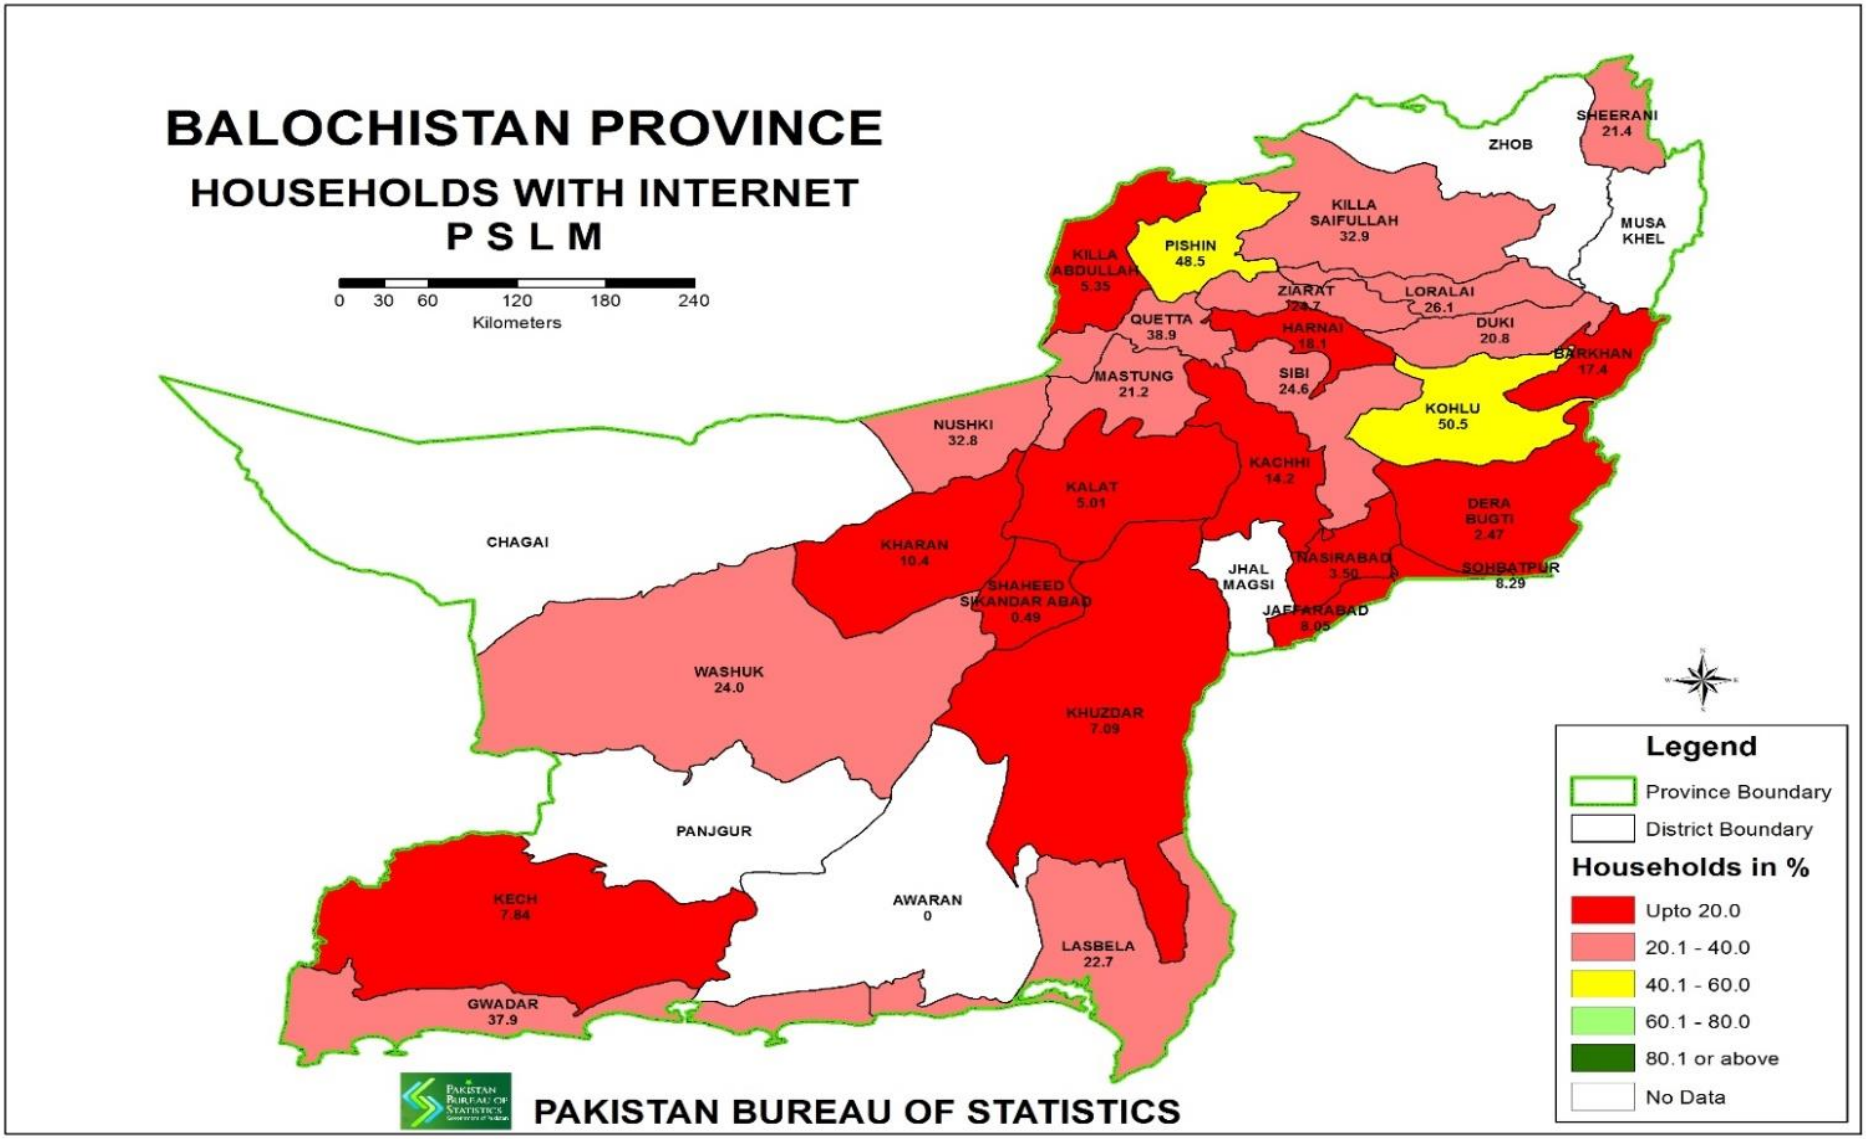

In Islamabad with 70 percent household have internet facility, whereas district wise situation of Provinces reveal that in Punjab, Rawalpindi is at top with 57 percent, Karachi East with 68 percent, Peshawar with 51 percent and Kohlu with 51 percent are at top ranked districts with respect to household with internet facility within their respective provinces. Whereas Rajanpur with 8 percent, Tharparkar with 3 percent South Waziristan with 2 percent and Shaheed Skindarabad with 1 percent household with internet facility are bottom ranked districts within respective provinces (Table 3.1)

3.3 Population Using Computer/Laptop/Tablet

PSLM 2019-20 collected information on use of Computer, Laptop, Tablet etc. and ICT skills, Ownership of Mobile and Use of Internet. Overall 7 percent individuals 10 years and older reported use of Computer/Laptop/Tablet in last three months. Punjab is at top where 8 percent individuals with age of 10 years and older are using Computer, Laptop or Tablet whereas Balochistan is at bottom with 4 percent. Situation of Balochistan rural is where with 2 percent individuals are using Computer, Laptop, and Tablet. (Figure 3)

.

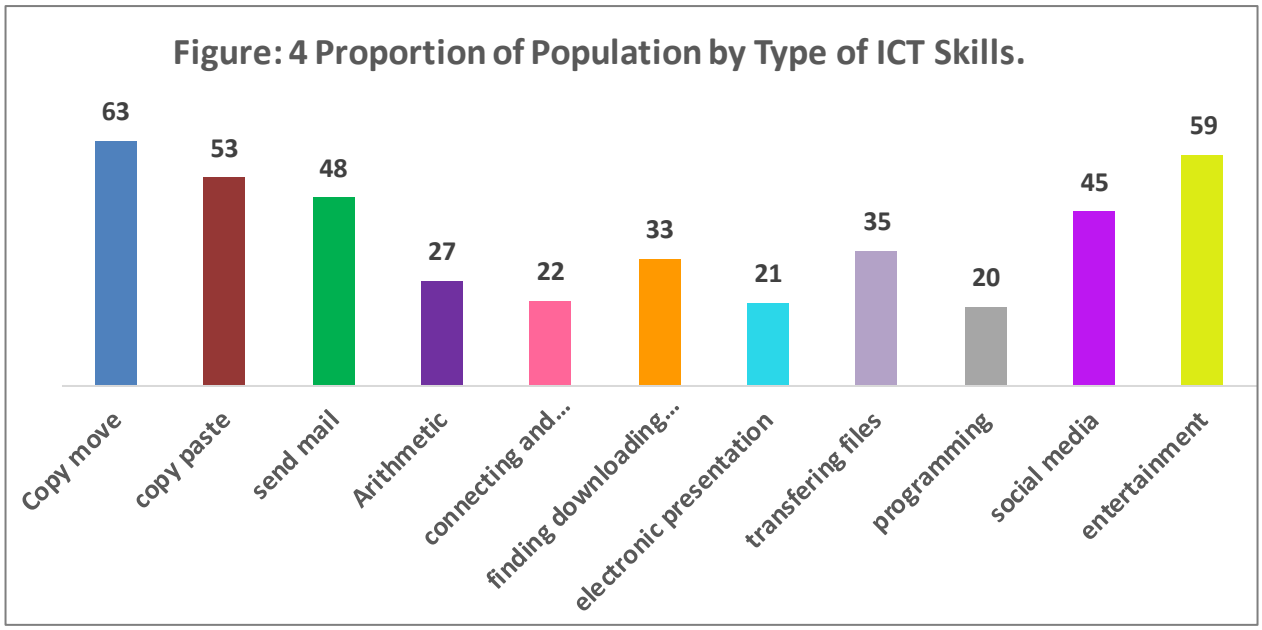

Reasons for not using Computer/Laptop/ was also part of survey, 63 individuals reported that they even don't know how to use these devices and 7 percent reported that they are not using Computer/Laptop/tablet because they are using substitutes mobile/Smart phones (Table 3-A)

Table 3-A: Reasons for not using Computer/Laptop/Tablet	
Don't know how to use it	63
Do not use it because (not useful, not interested, cultural reasons)	19
Affordability	8
Use substitutes mobile phone/smartphone etc.	7
Other Specify	3

3.4 Type of ICT Skills: ICT skills are about understanding and applying a range of computer programmes, software and other applications. These include: word processing, spread sheets, databases, power points and search engines. Proportion of population by type of ICT Skills is expressed in the (Figure 4). Most of the

population 10 year and older using Computer/Laptop/Tablet are familiar with Copy & Paste with 63 percent and Copy & Move with 53 percent respectively. Least population is aware of Programming with 20 percent followed by making Power Point Presentations with 21 percent. Percentage of individuals using Computer/ Laptop/Tablet for Entertainment and involved in Social Media activities is relatively high with 59 percent and 45 percent respectively. (Figure 4)

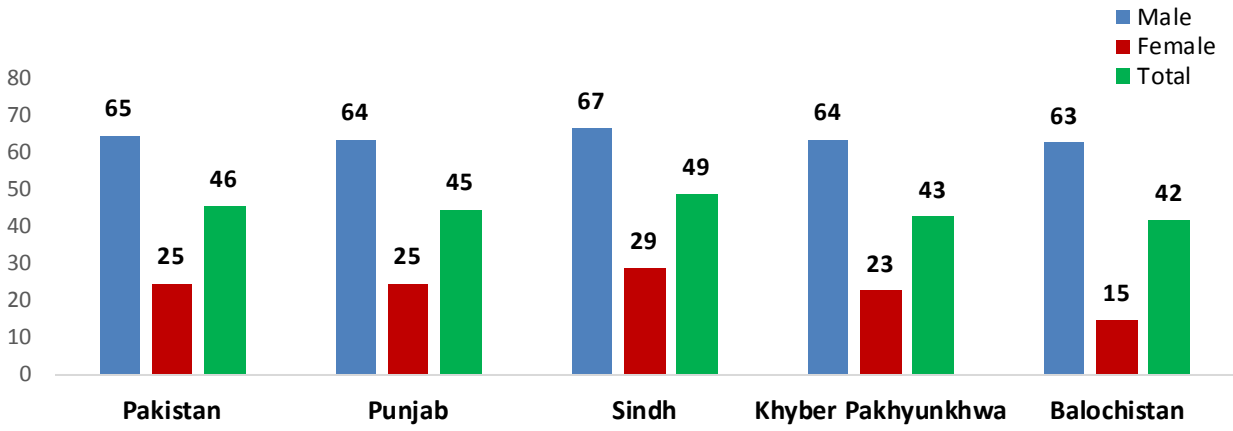

3.5 Mobile/Smart Phone by Ownership and Usage: In Pakistan, 46 percent individuals 10 years and older reported that they own Mobile Phone (SDG 5.b.1). Gender gap has been observed in Mobile Ownership as 64 percent of male population own mobile whereas only 25 percent of female population reported Mobile Ownership. (Figure 5)

Sindh with 49 percent is observed where highest number of individuals 10 years and older reported that they own Mobile Phone, Gender gap is evident as 67 percent of male and only 29 percent of female reported Mobile Ownership. While in Punjab 44 percent of population reported mobile ownership, with 64 percent male and 25 percent of female. Mobile Ownership in Khyber Pakhtunkhwa is observed as 43 percent, with wide gender gap i.e. 65 percent and 23 percent male and female respectively. Balochistan is at bottom with 31 percent of mobile ownership, gender gap is also high as 63 percent of male and 14 percent of female individual 10 years and older own with mobile Phone. (Figure 5)

In Islamabad 64 percent of individuals 10 years and older reported that they own Mobile Phone. District situation reveal that, In Punjab, Lahore with 56 percent, Karachi East with 73 percent, Abbottabad with 53 and

Kohlu with 56 percent are top ranked districts. Whereas Muzaffar Garh with 34 percent, Badin with 29 percent, Mohmand with 27 percent and Khuzdar with 23 percent are districts where lowest number of individual 10 years and older reported that they own Mobile Phone. (Table 3.2)

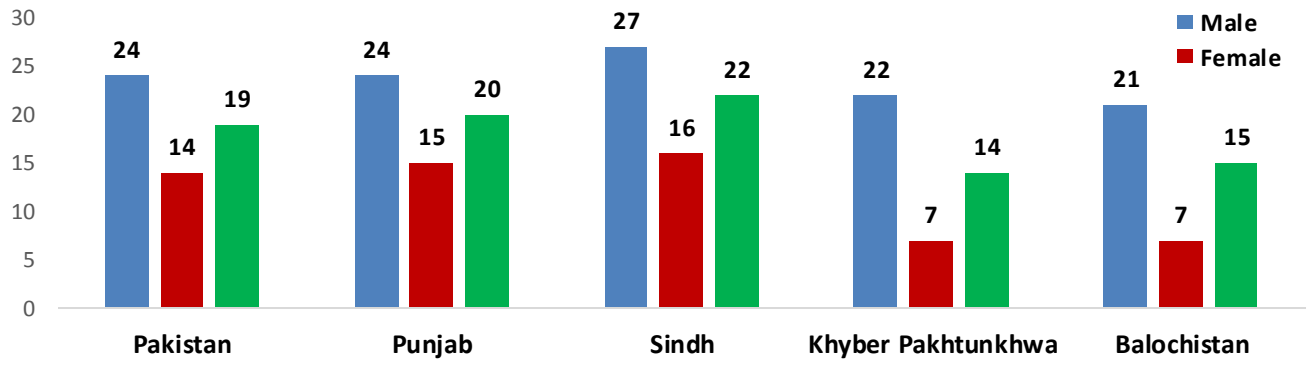

Figure 5: Percentage of Individual 10 years and Older by Mobile phone Ownership

3.6 Individual Age 10 years and Older with Use of Internet in last Three Months

People use internet for communication, information seeking, education and research purpose, shopping, banking entertainment etc. In Pakistan 19 percent individuals age 10 years and older reported that they used Internet in past three months, where 24 percent of male are using internet as compared to 14 percent of female. Regional gap is also observed as 30 percent population in urban areas reported the use of internet as compared to only 12 percent rural population. Provincial comparison reveals that individuals 10 years and older in Sindh with 22 percent are highest who used Internet in past three months while Balochistan percentage is lowest with 7 percent. Whereas Punjab with 19 percent and Khyber Pakhtunkhwa with 14 percent individuals age 10 years and older reported that they used Internet in past three months. (Figure 6)

Figure 6: Percentage of Individual 10 years and Older Used Internet in Last Three Months

In Islamabad 52 percent individuals reported that they used Internet in last three months who are using Internet. District wise situation reveal that, Rawalpindi with 52 percent, Karachi East with 55 percent, Abbottabad with 27 percent, and Kohlu with 23 percent are top ranked districts within the respective provinces. Rajanpur at with 3 percent Tharparkar with 2 percent , South Waziristan with 1 percent and Dera Bhughti with 1 percent are bottom ranked where individuals 10 years and older used Internet in last three months . (Table 3.3)

PSLM 2019-20 collected information from the individual 10 years and older who used internet in last three months regarding the frequency of usage of the internet during the last three months. About 46 percent population reported that they used internet at least once in a day, where 47 percent male and 43 percent of females reported use of internet at least once a day. Urban and Rural comparison showed that 50 percent urban and 39 percent of rural population reported that they used internet at least once in a day, where gender gap is more in rural areas where only 34 Percent females used internet at least once in a day. (Table 3-B)

Table 3-B : Frequency of Use of Internet by Region and Gender

Region\Gender	Male	Female	Total
Overall			
At least Once a day	47	43	46
At least Once a Week	11	14	12
At least Once in a Month	2	2	2
When Needed	39	40	40
Urban			
At least Once a day	51	47	50
At least Once a Week	9	12	10

4. Health

Pakistan shows accelerating growth in health sector as compare to Last five years. The results show that each health measure indicates positive health profile in all districts; erstwhile some less Developed districts of Sindh, Khyber Pakhtunkhwa and Balochistan. The graph of Khyber Pakhtunkhwa is remarkably flourishing but on other side the merger of FATA affects it. FATA merger is an incredible achievement of the government in previous years it helps the provincial government to play its role in the development of those districts which were out of the legislative limitation in the past.

Agenda

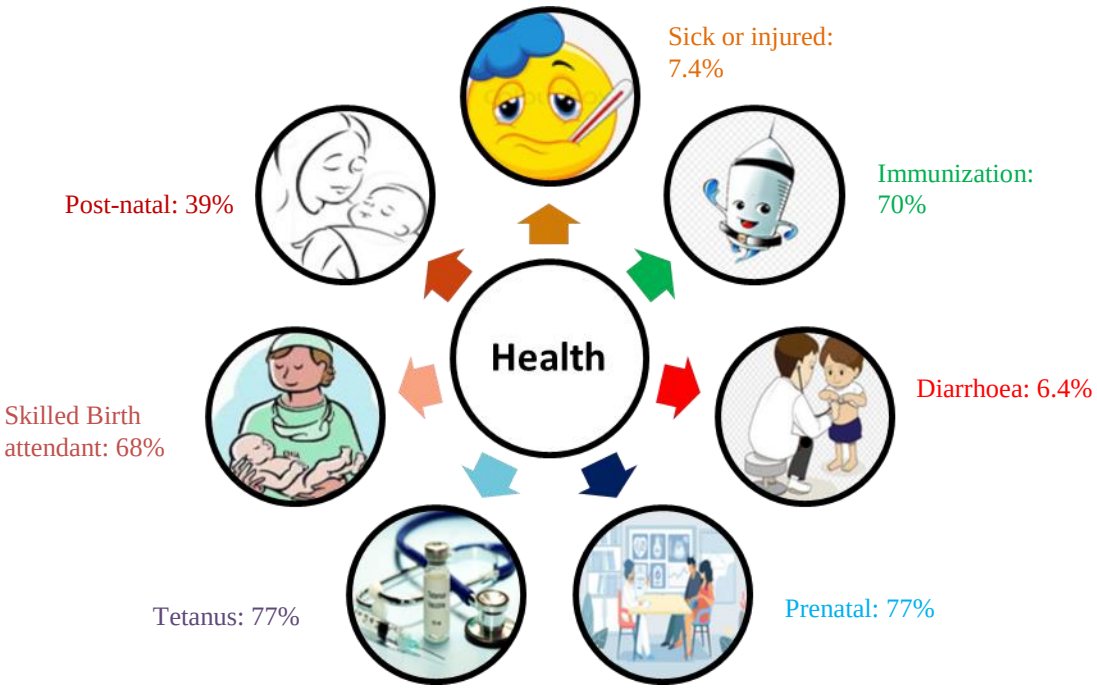

The goal behind the health section of this survey is to identify different indicators in our health sector from maternal health to infant health and to enlighten where our health system stands in terms of public and private sector in each district.

Pakistan Social and Living Standard Measurement (PSLM) Survey data on Health provides platform to government agencies, stake holders and non-government organizations to monitor the progress in Health sector by analysing the results of our health indicators which are as follows:

- Percentage of population who got Sick or Injured
- Type of health consultation
- Immunization in children's under five years of age
- Diarrhoea and consultation for the treatment of diarrhoea
- Pre and Post-natal care
- Tetanus toxoid during last pregnancy
- Place of infant delivery
- Skilled Birth Attendant

The tables given in this report give present the latest data with the previous trends. This chapter will provide key indicators on Health at National/Provincial and District level to overview the Progress and to assess the areas to enhance the coverage of health facilities as per the requirements.

Figure 1 Key health indicators of Pakistan's health sector.

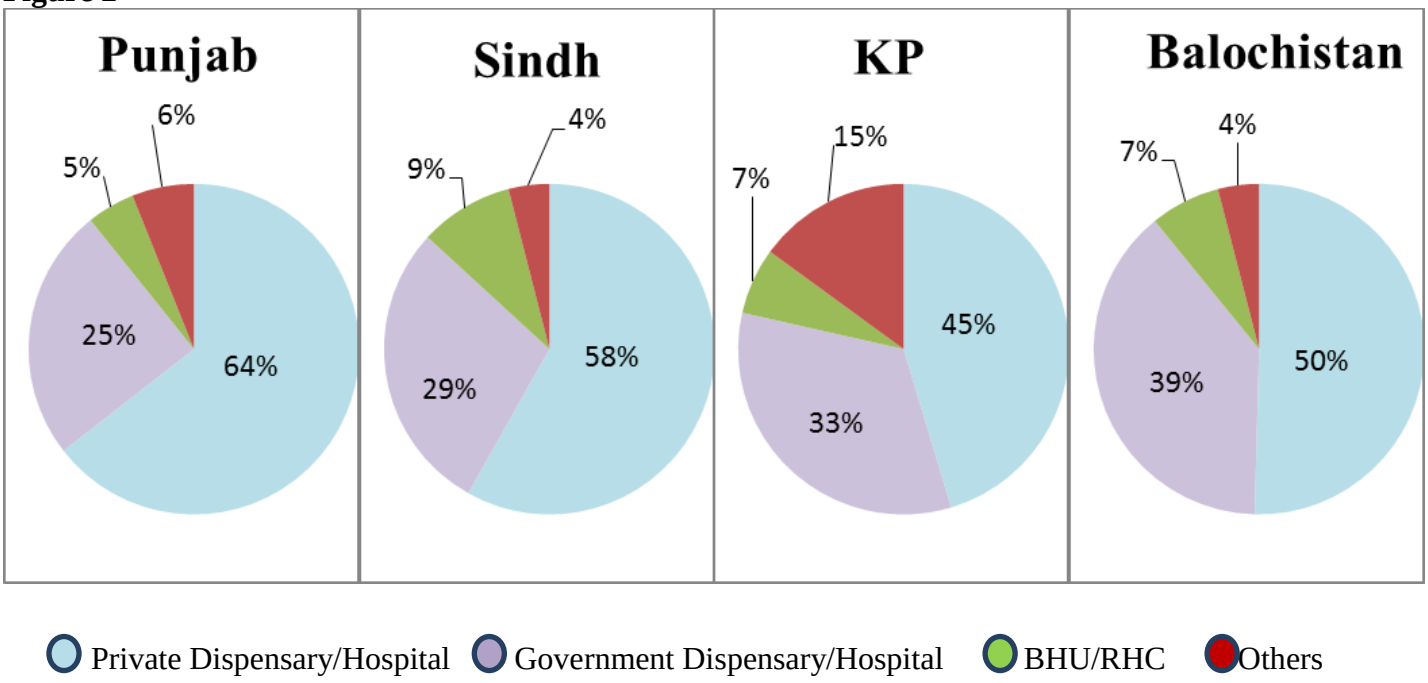

4.1 Sick or Injured

According to survey the reference period of two weeks prior to the date of interview 7.4 percent of the population in 2019-20 have reported as sick or injured in Pakistan. Khyber Pakhtunkhwa (KP) with 8.6 percent has comparatively higher prevalence of sick or injured population, district Orakzai at top with 14.7 percent sick or injured population and district Khyber is at bottom with 3.1 percent population. Sindh with 8.1 percent has comparatively less sick or injured population, district Larkana is at top with 25.1 percent sick or injured population and district Shikarpur is at bottom with 1.8 percent population. Punjab has 6.8 percent prevalence rate, district Toba Tek Singh is at top with 10.9 percent sick or injured population and district Sialkot is at bottom with 2.8 percent population. Balochistan with 6.1 percent has lowest sick or injured population district Gawadar is at top with 14.1 percent sick or injured population. In Islamabad reported number of cases fallen sick or injured is 4.8 percent. About 95 percent of sick and injured persons had some type of health consultation (Table 4.1b).

Overall 58 percent of sick or injured persons consulted private dispensary/hospitals, 28 percent visited government dispensary/hospitals and 6 percent visited RHC/BHU for their treatment (Table 4.2). Analysing the type of consultation, it is observed that Punjab has the highest rate for private

dispensary/hospital for consultation i.e. 64 percent; follow up by Sindh with 58 percent private dispensary/hospital; then Balochistan with 50 percent and Khyber Pakhtunkhwa have the lowest level of private dispensary/hospital consultations i.e. 45 percent. Whereas in case of government dispensary/hospitals consultation highest rate prevails for Balochistan i.e. 39 percent, and Sindh with 9 percent rate of RHC/BHU consultation is highest among provinces (Figure 2) however the pattern of consultation varies among the districts.

Figure 2

4.2 Immunization

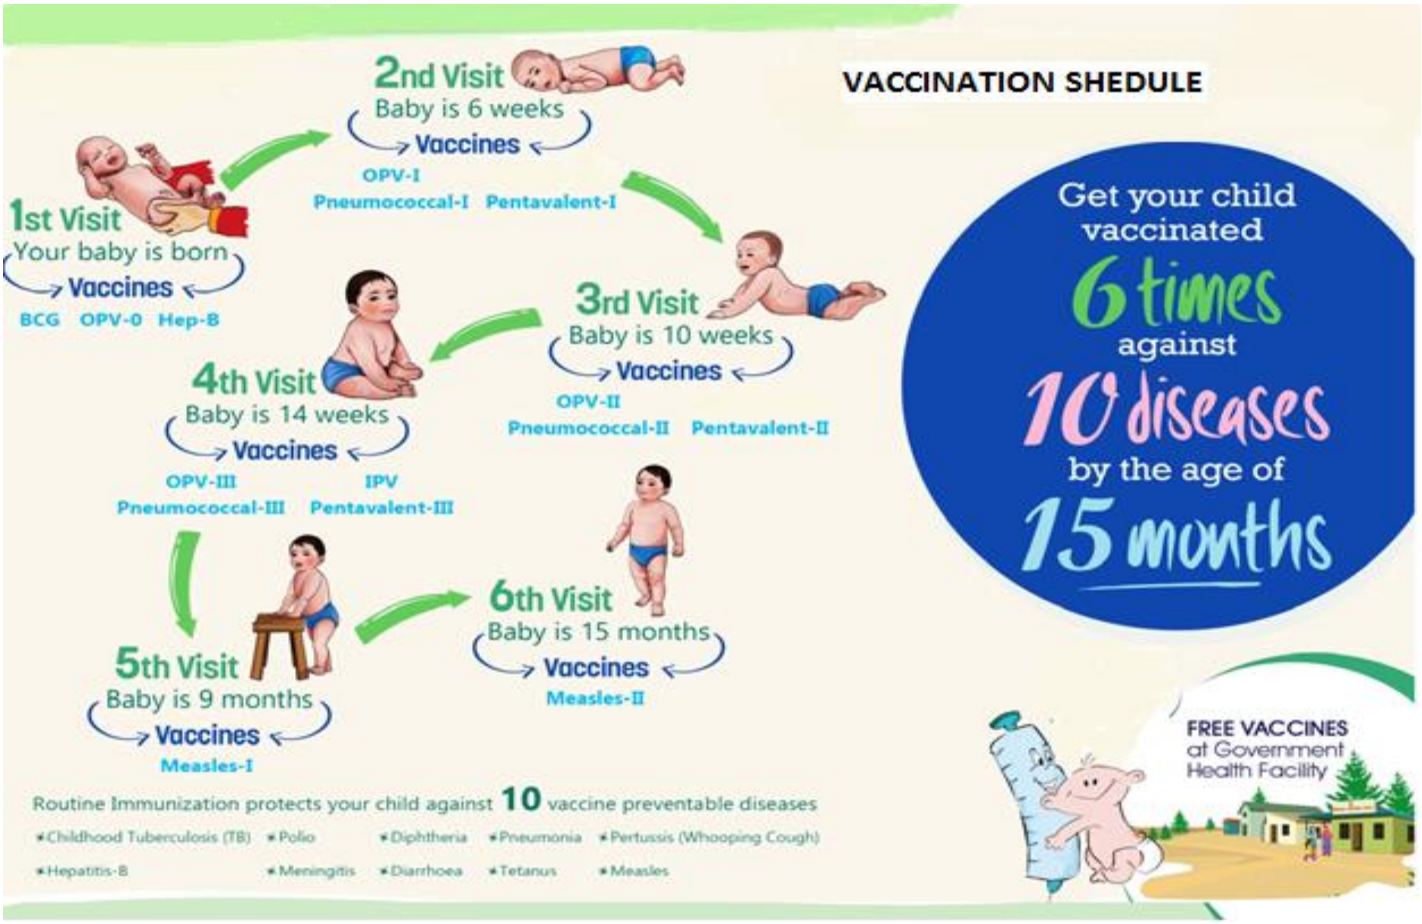

IMMUNIZATION is an easy and effective way to protect an infant against deadly diseases by injecting certain substances to their immune, which stimulate the production of disease-fighting antibodies into the body. According to health experts immunization is equally necessary for a society as healthy food and one of the most successful and cost effective health interventions. It reduces the spread of viral diseases from one child to another and prevents the effect of small pox, lowered the global incidence of polio, pertussis (whooping cough), influenza, hepatitis-B, Pneumonia, tetanus, rotavirus, typhoid, and measles and achieved histrionic reduction in disability.

Pakistan is part of the Expanded Programme on Immunization (EPI) since 1978 to eradicate polio and other diseases under the instructions of world health organization (WHO) and other donor agencies. Immunizing children with these vaccines may avert up to 17% of childhood mortality in Pakistan and this programme thus help in Pakistan to protect against eight vaccine preventable diseases in children below 23

months of age and may reduce up to 17 percent of childhood mortality in Pakistan and also contribute towards achieving Sustainable Development Goal 3, on reducing child morbidity and mortality.

The World Health Organization suggests that a child must receive a dose of Bacillus Chalmette Guerin (BCG) vaccination in order to get protected against tuberculosis, three doses of Penta-Valent which is combination of five doses to have protection against (Diphtheria, Pertussis, Tetanus, Hepatitis B and Influenza B), three doses of Pneumococcal against the bacterium Streptococcus pneumonia, three doses of polio vaccine and two doses of measles vaccination. In polio endemic countries WHO recommends a birth dose (zero dose) for polio and at least a single dose of IPV should be included in their vaccination schedule. These all vaccinations are administered at specific time intervals as mentioned below:

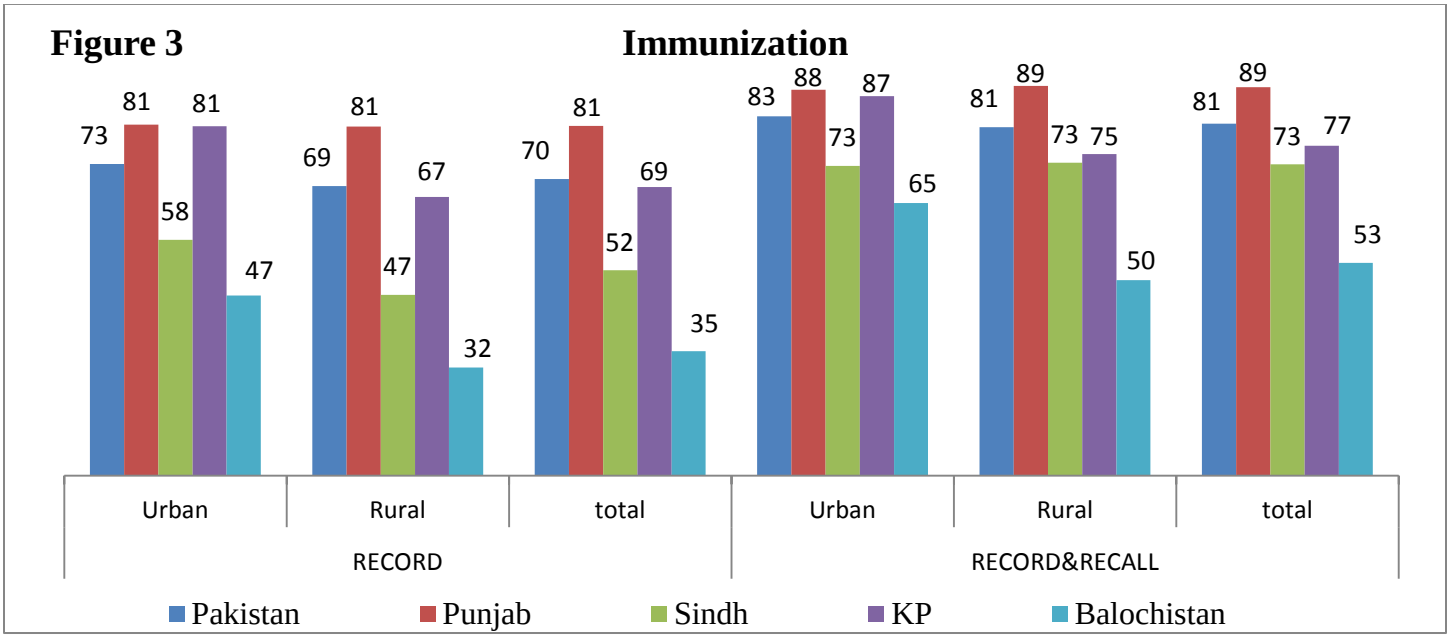

Disease	Causative agent	Vaccine	Doses	Age
Childhood TB	Bacteria	BCG	1	Soon after birth
Poliomyelitis	Virus	OPV	4	OPV0: soon after birth OPV1: 6 weeks OPV2: 10 weeks OPV3: 14 weeks
		IPV	1	IPV: 14 weeks
Diphtheria	Bacteria	Pentavalent vaccine	3	PENTA1: 6 weeks PENTA2: 10 weeks PENTA3: 14 weeks
Tetanus	Bacteria			
Pertussis	Bacteria			
Hepatitis B	Virus			
Influenza B	Virus			
Hib pneumonia and meningitis	Bacteria	Pneumococcal	3	PNEU1: 6 weeks PNEU 2: 10 weeks PNEU 3: 14 weeks
Measles	Virus	Measles	2	Measles1: 9 months Measles2:15months

In Pakistan primarily government health care provider issue immunization card to every new born, which help parents and their health care provider to keep child on schedule and by reminding them when next immunizations are due. However, assessing immunization coverage from a large sample size is a very difficult task; parents often do not have their children's immunization / health cards with record of how many vaccinations received; which underestimate the coverage of immunization rate based only on the information given on immunization cards categorized as 'based on record'. The alternative way is to ask parents about their child's vaccination history, and calculate coverage rates using this information termed as 'based on recall'. But there is a definite risk that parents will not remember vaccinations and will confuse different types of vaccines or other injections with vaccinations.

However questions are asked in questionnaire in a way to filter out such cases and during training the enumerators are also briefed about probing techniques to get better and reliable information. In this report, both of these measures are calculated for all children of the age range 12 to 23 month. Table 4.3a and 4.3b shows the results at district level as well as provincial and Pakistan level.

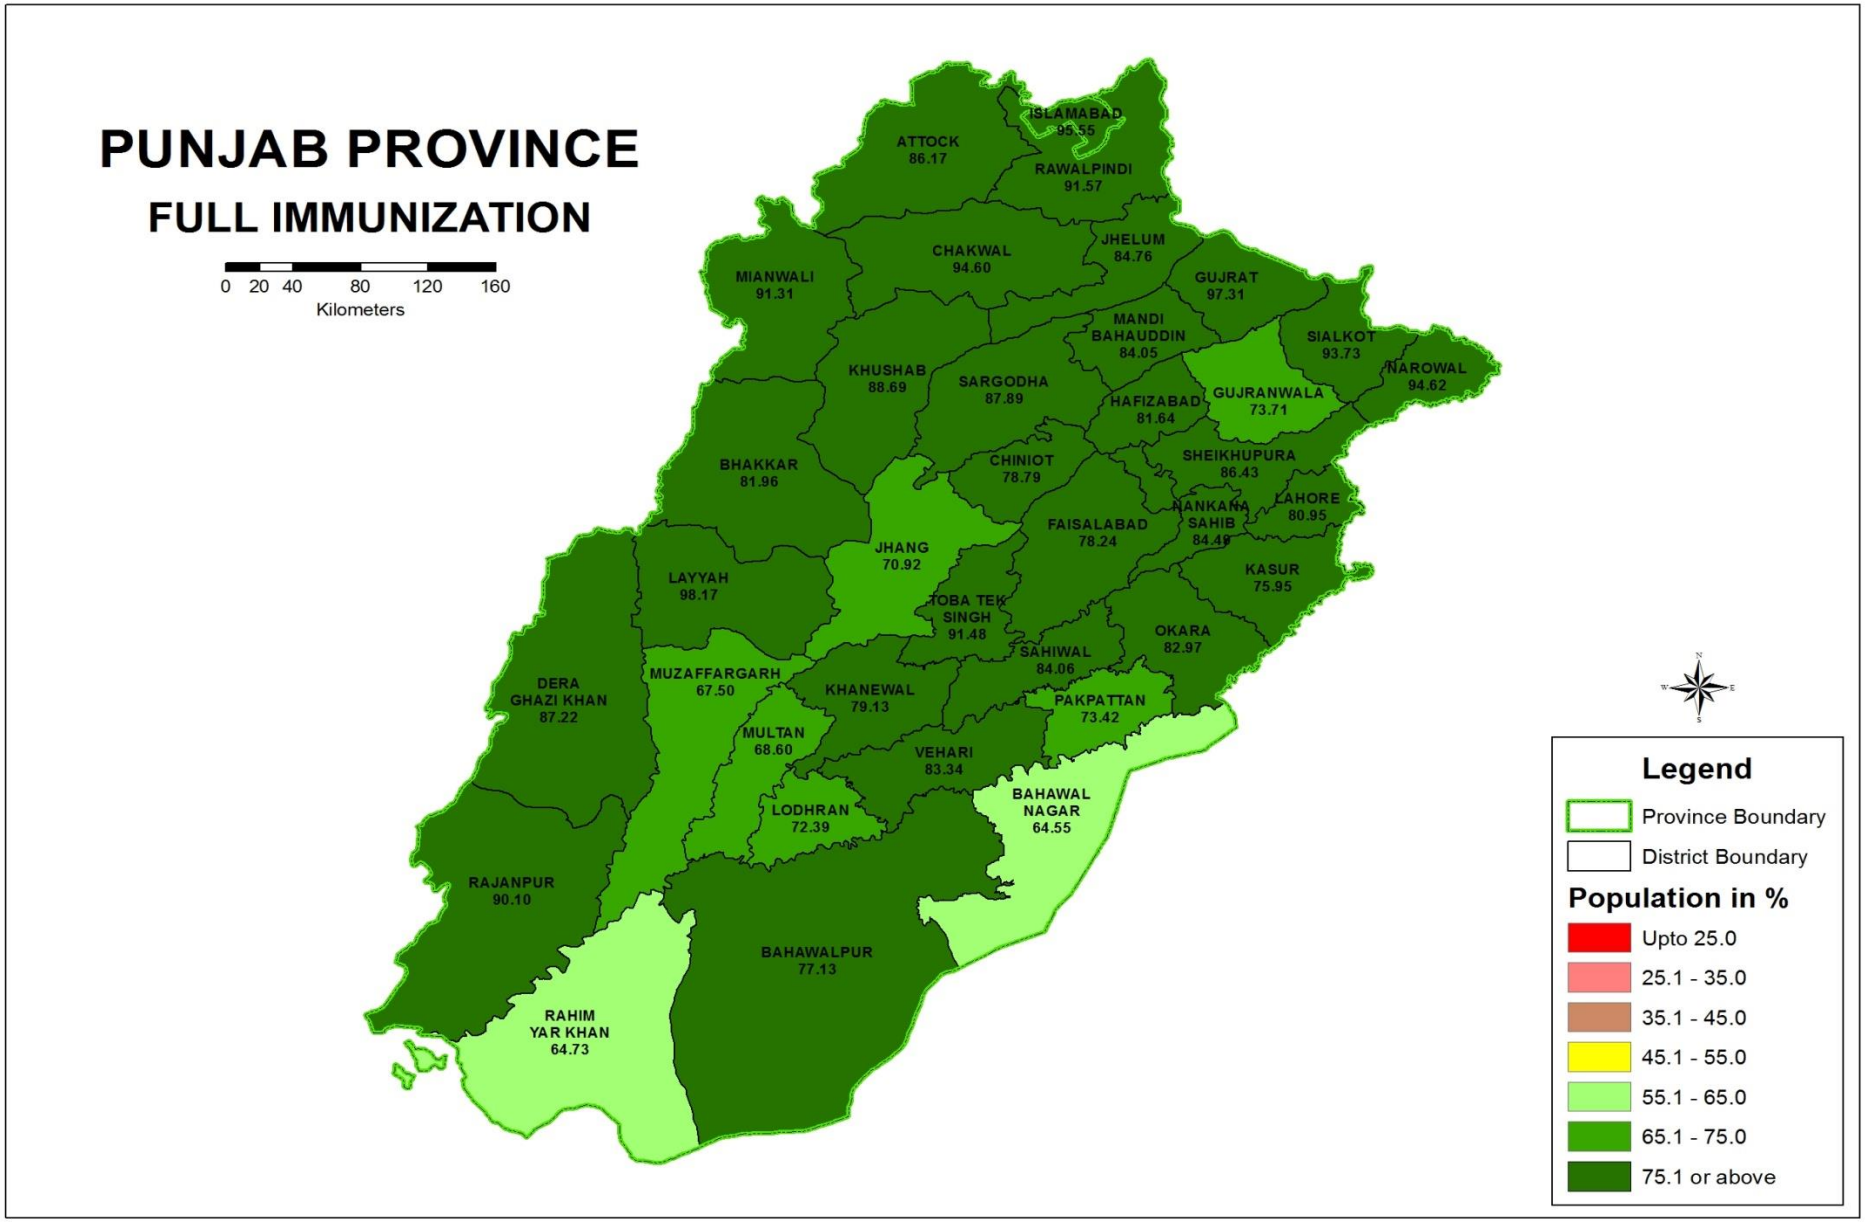

Full immunization rates (all the 11 recommended vaccines) based on record increased to 70 percent in 2019-20 from 60 percent in 2014-15. Regarding the urban and rural comparison the immunization rates for urban areas has increased to 73 percent in 2019-20 as compared to 70 percent in 2014-15 and similar pattern is observed in rural areas 69 percent in 2019-20 as compared to 56 percent in 2014-15 thus, rate of increase is more rural areas as compare to urban areas. Among provinces Punjab with 81 percent in 2019-20 has the highest percentage of children who are fully immunized based on record as compared to 70 percent in 2014-15 followed by Khyber Pakhtunkhwa with 69 percent in 2019-20 as compared to 58 percent in 2014-15, Sindh with 52 percent in 2019-20 as compared to 45 percent in 2014-15 and Balochistan immunization rate increased to 35 percent in 2019-20 as compared to 27 percent in 2014-15 (Table 4.3 b).

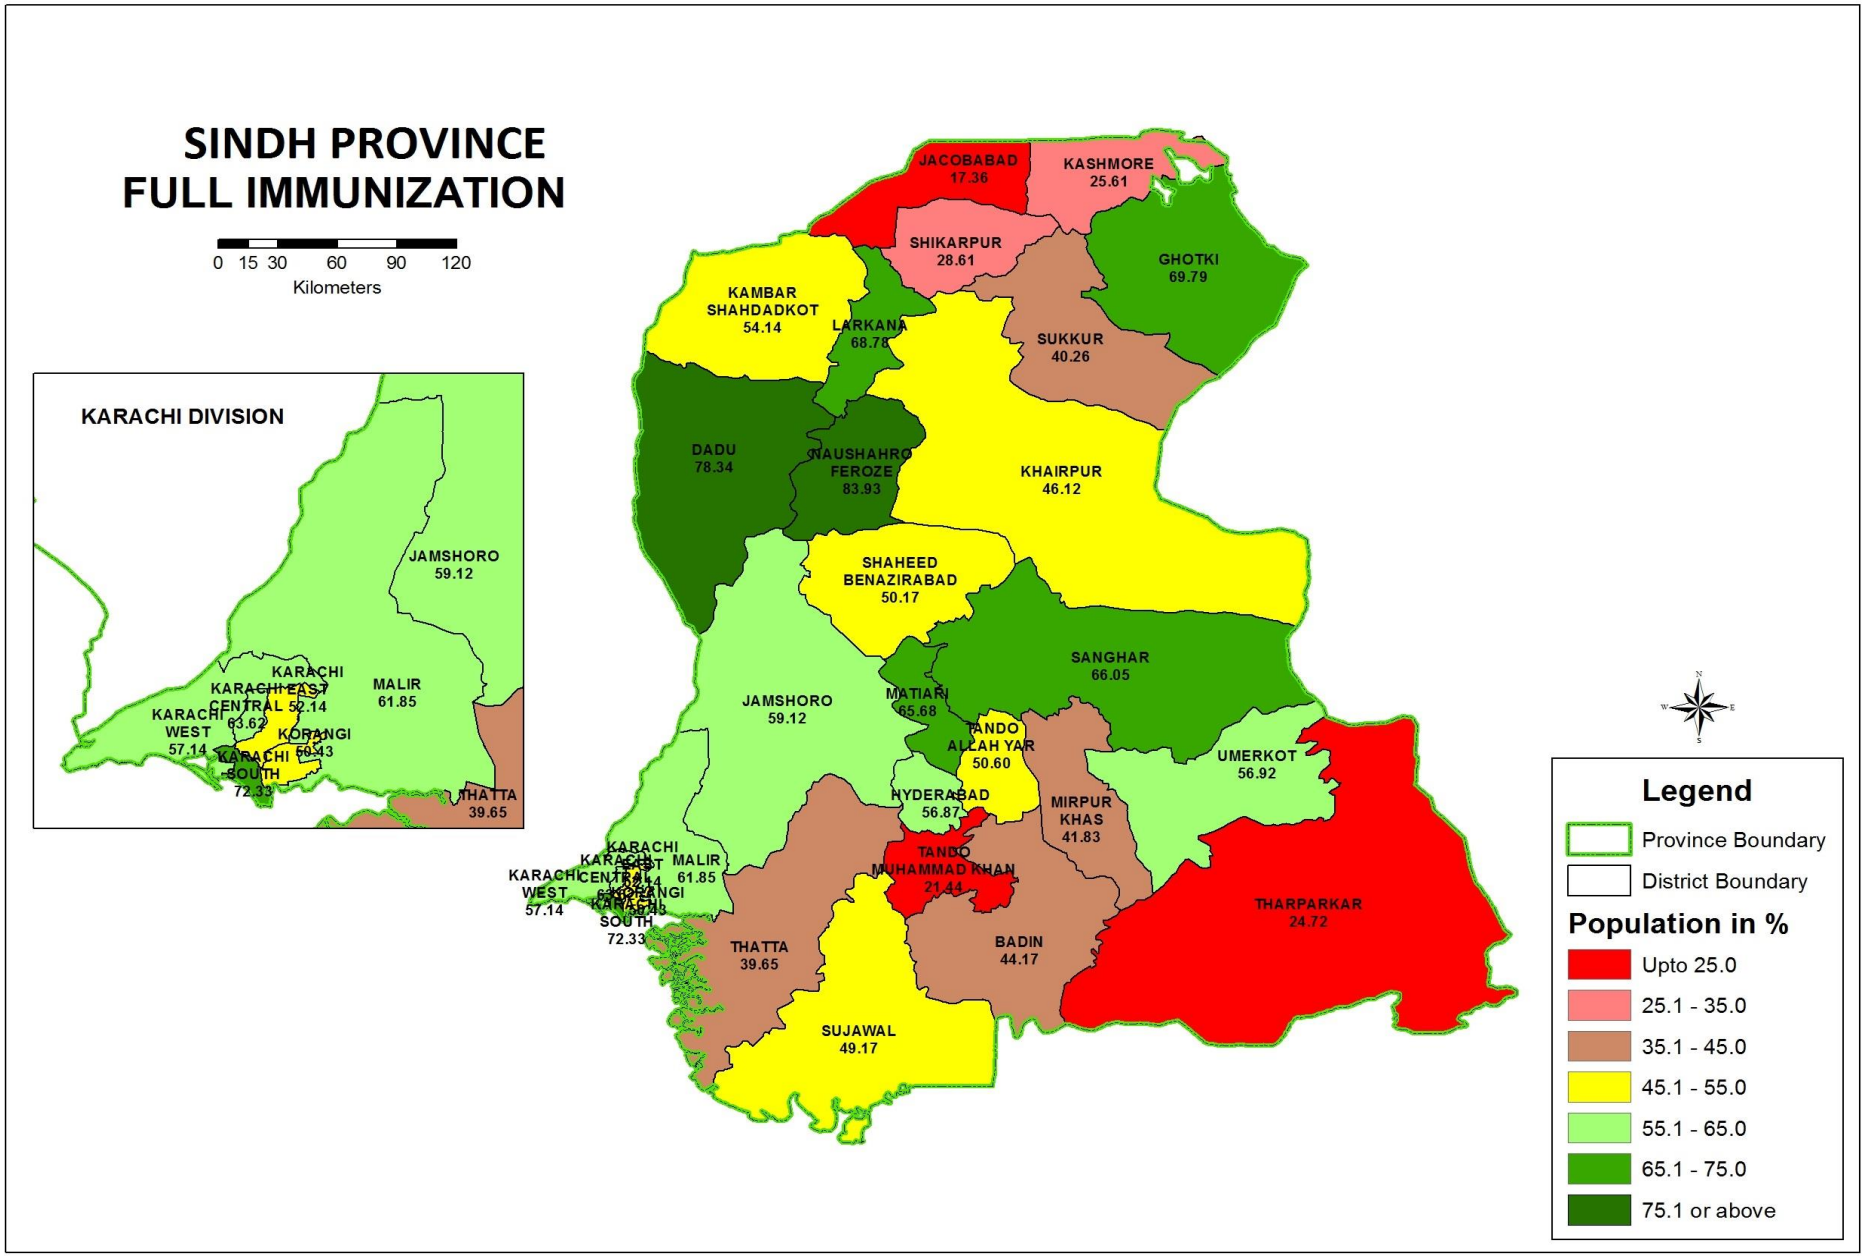

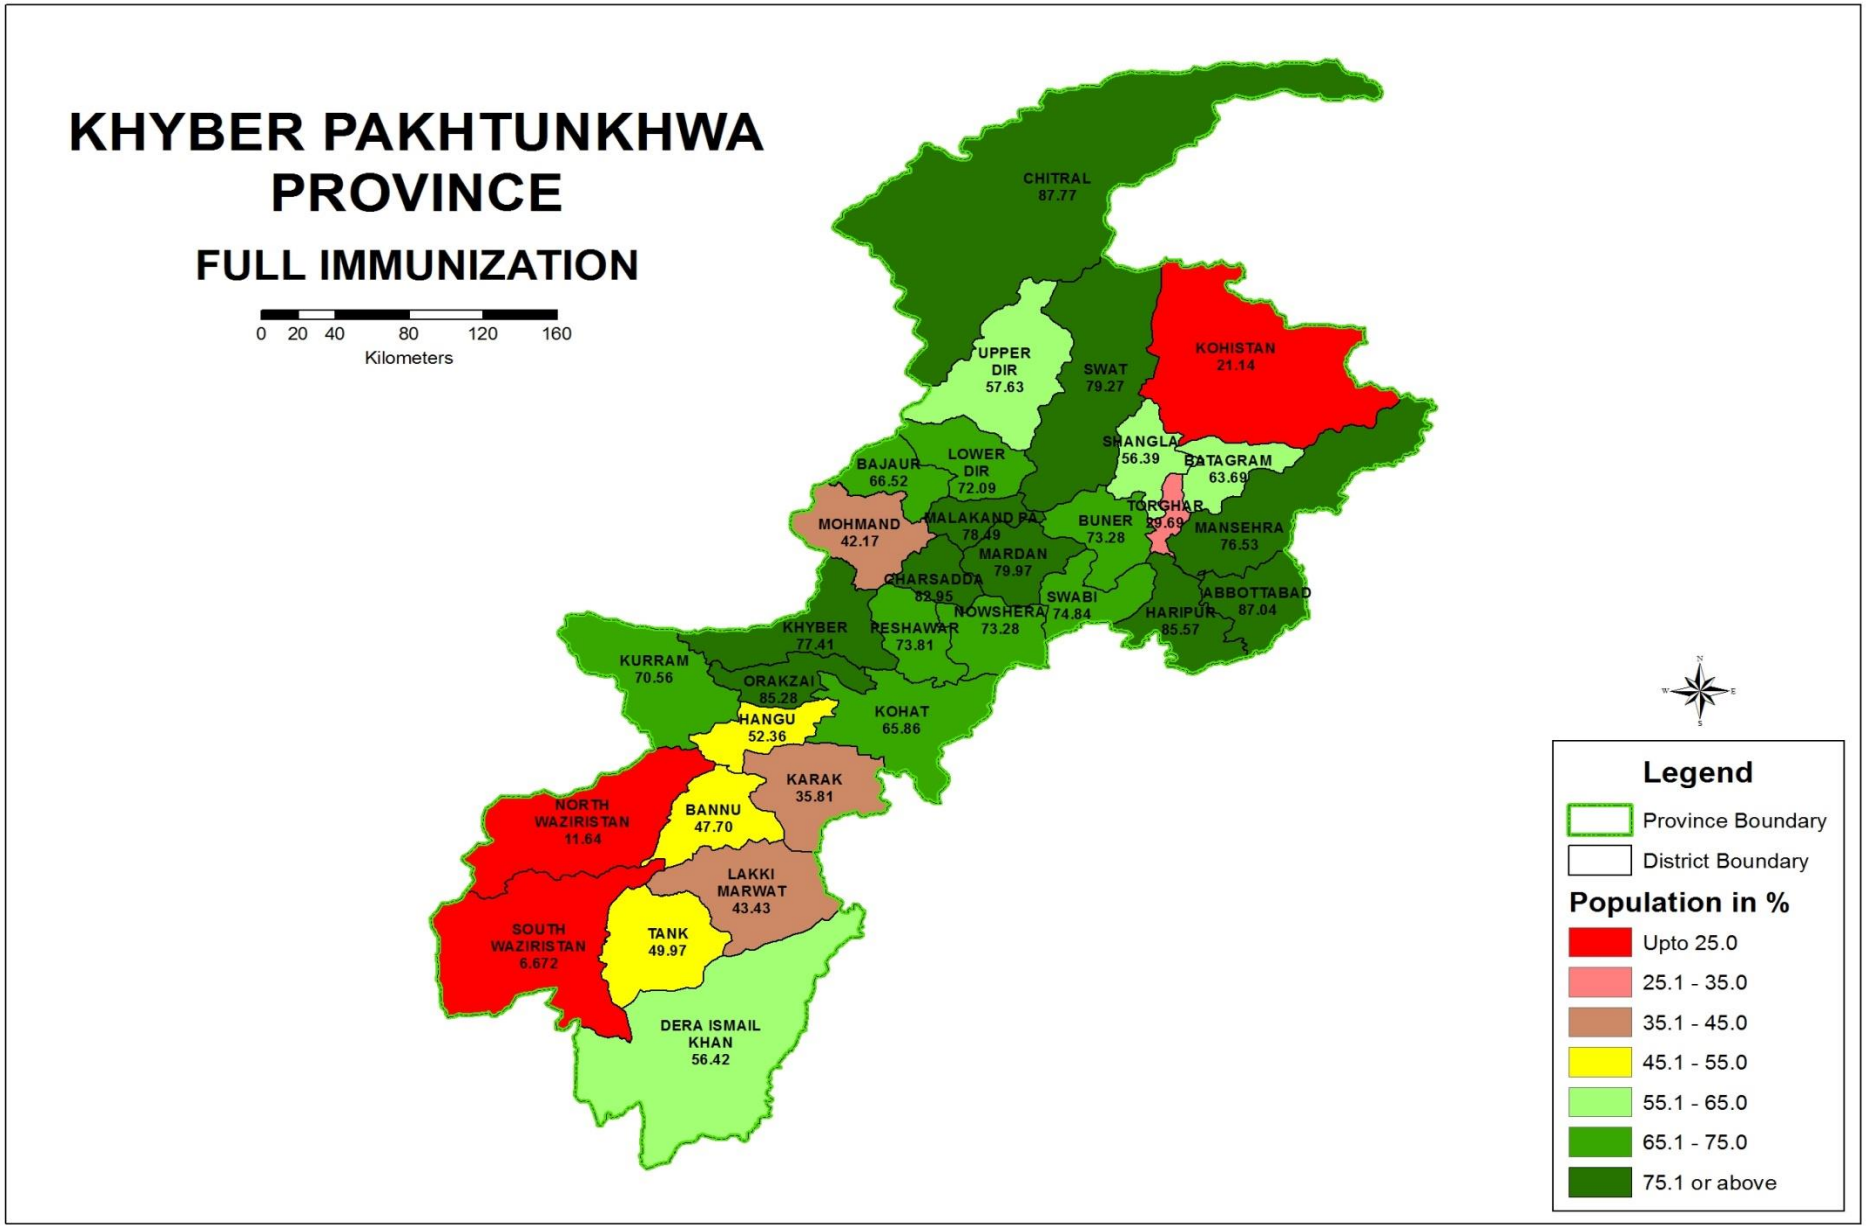

Full immunization rates based on recall and record is 81 percent in 2019-20 as compare to 82 percent in 2014-15. Islamabad increased to 96 percent in 2019-20 as compare to 90 percent in 2014-15. While analysing the district level pattern, Gujrat with 99 percent in Punjab, Dadu with 93 percent in Sindh, Malakand with 100 percent in Khyber Pakhtunkhwa and Shaheed Sikandarabad with 91 percent in Balochistan are the top ranked districts. While Pakpattan with 75 percent in Punjab, Tharparkar with 35 percent in Sindh, North Waziristan with 37 percent in Khyber Pakhtunkhwa and Kohlu with 0 percent in Balochistan are the bottom ranked (Table 4.3c).

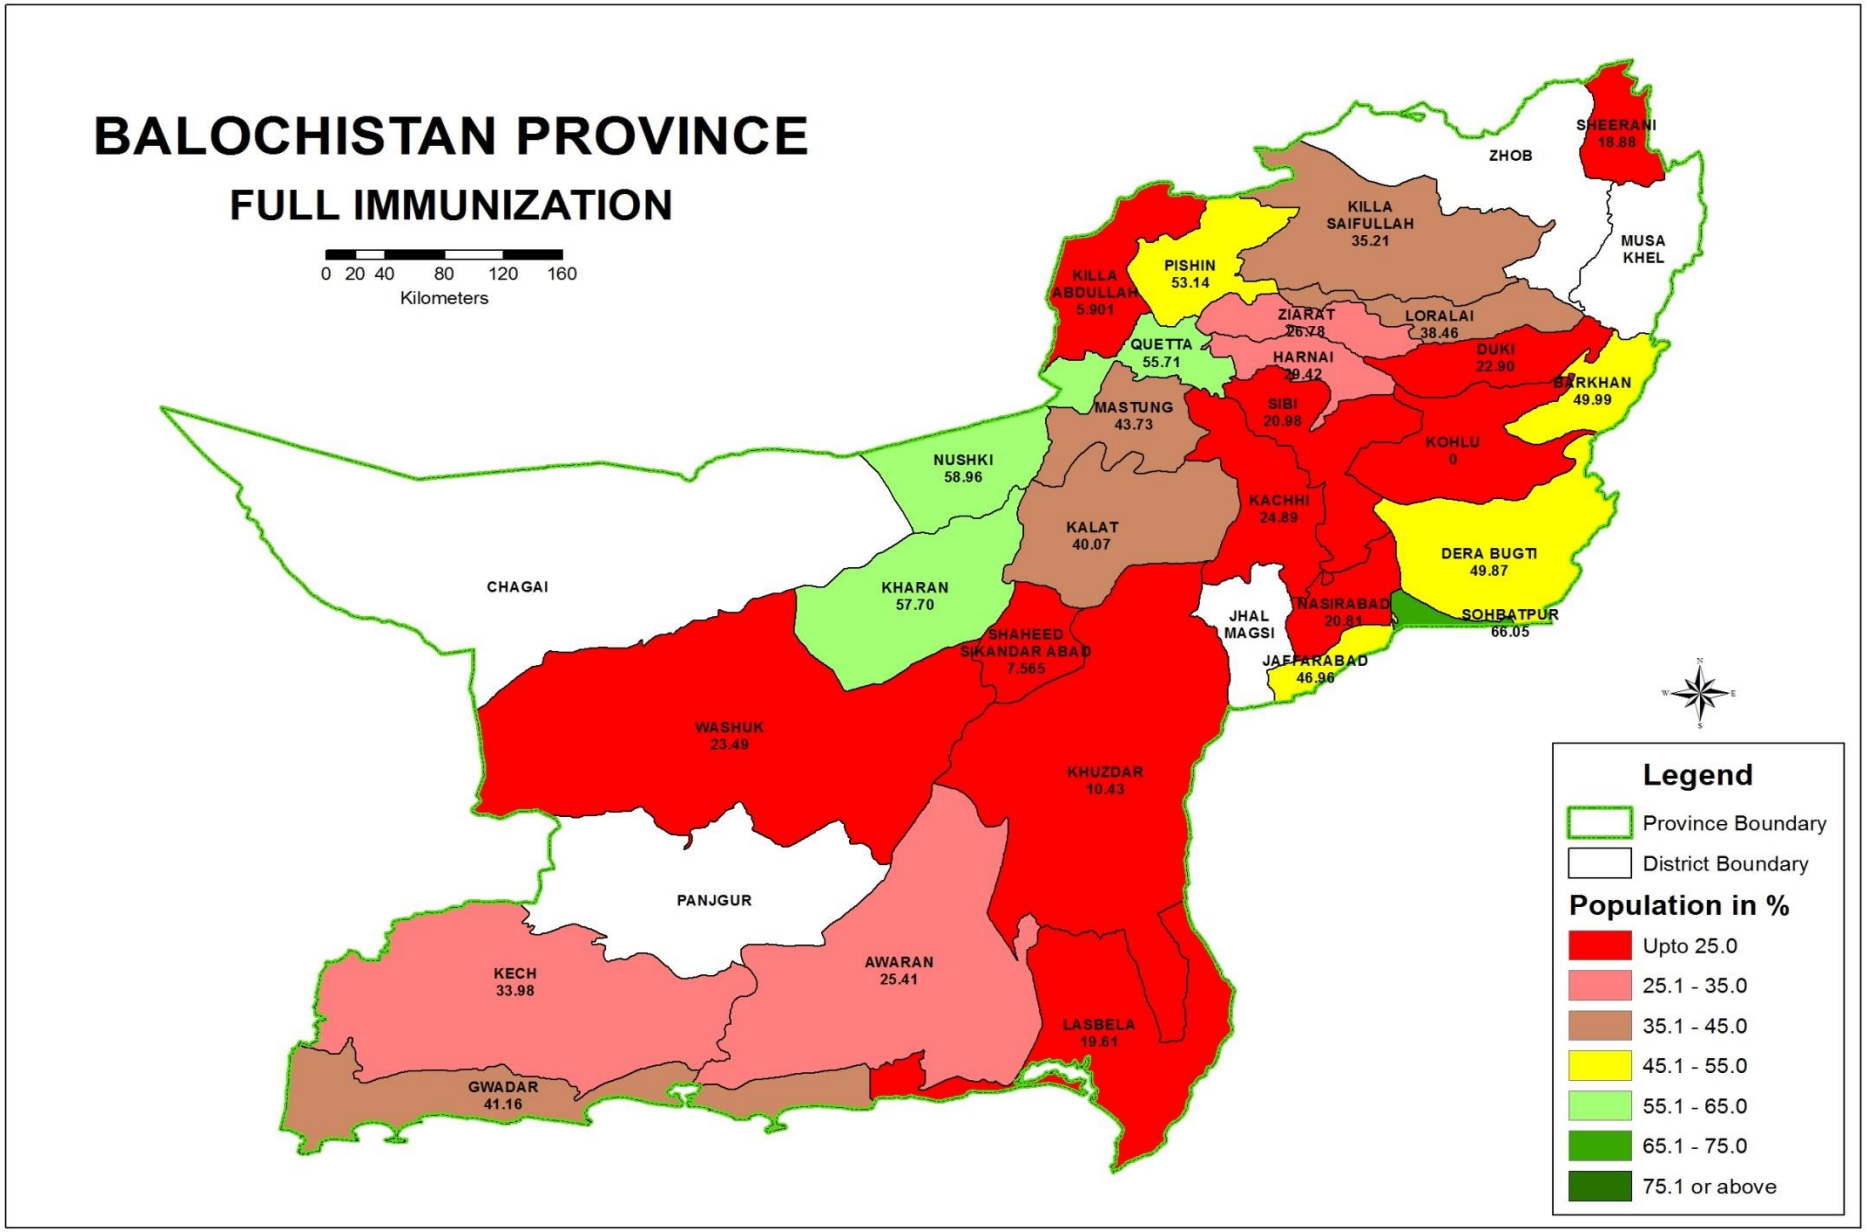

Table 4.3b (record Based) and Table 4.3c (based on record and recall) provides coverage Antigen wise. Having a look at record based measure, the visible increase is seen in all antigens at provincial level as compared to 2014-15, however coverage of measles vaccination with 67 percent in 2019-20 as compared to 61

percent in 2014-15 is still very low as compared to other vaccinations. Besides this, Khyber Pakhtunkhwa results indicate relatively higher increase than other provinces. Bahawalnagar in Punjab, Jacobabad in Sindh, and South Waziristan in Khyber Pakhtunkhwa and Kohlu in Balochistan have lowest coverage of all antigens with in their respective provinces. Measles coverage is highest in Punjab with 83 percent followed by Khyber Pakhtunkhwa with 70 percent, Sindh with 54percent and Balochistan with 39 percent antigen wise based on record.

4.3 Diarrhoea

Loose, watery stools, abdominal cramps, Fever, Blood in the stool, Nausea are some of the main reason of diarrheal disorder. It may be infectious or non-infectious. Generally acute diarrhoea last for one to two days and usually resolves by its own at home treatment through Oral Rehydration Salt (ORS) or a recommended home fluid (RHF), but if there is a chronic one and last for weeks than its dangerous and indicate that there is some persisted infection in your bowel. Diarrhoea can be dangerous in new born and infants. In small children, severe diarrhoea lasting just a day or two can lead to dehydration and can cause death.

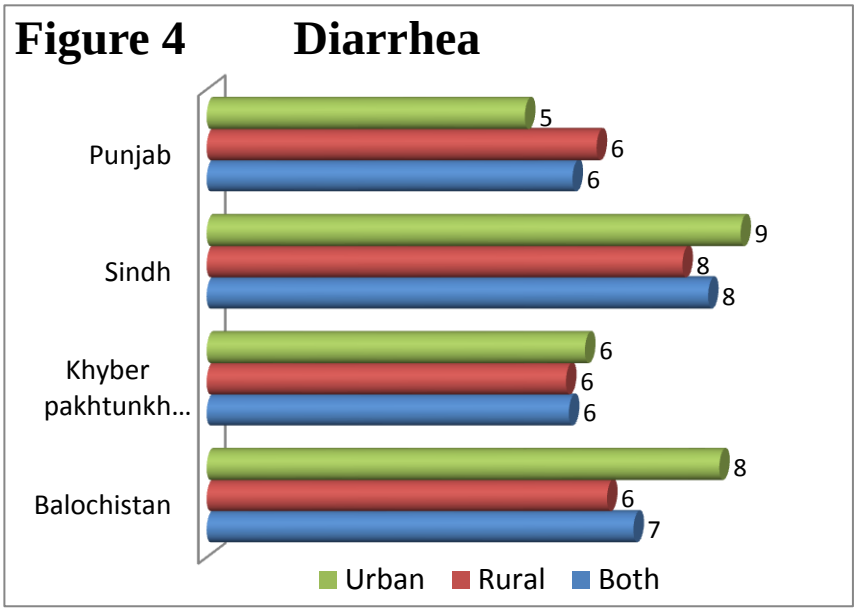

Diarrheal disease is the second leading cause of death in children under five years old. It is both preventable and treatable. Globally, there are nearly 1.7 billion cases of childhood diarrheal disease every year; out of these around 5.25 laces children fewer than five dies every year. A significant proportion of diarrheal disease can be prevented through safe drinking-water and adequate sanitation and hygiene[1].

Diarrhoea can last several days, and can leave the body without the water and salts that are necessary for survival. Most children who die from diarrhoea actually die from severe dehydration and fluid loss. Childhood diarrhoea has been a serious health problem in Pakistan. Both its prevention, through improved water and sanitation, and the treatment of dehydration through oral re-hydration salt (ORS) are goals of the government.

Households were asked to report whether a child had diarrhoea in past 15 days prior to the survey. If child suffered from diarrhoea in last 15 days, series of questions were asked whether they have consulted someone for it or not, type of practitioner to be consulted and whether ORS has been given to child or not.

Overall percentage of children who have suffered from diarrhoea in the 15 days prior to survey is 6 percent in 2019-20

Figure 4 Diarrhea

[1]WHO, Newsroom, Fact sheet, Detail, Diarrheal Disease.

as compared to 9 percent in 2014-15. Highest percentage of diarrhoea cases were reported in Sindh with 8 percent in 2019-20 as compared to 6 percent in 2014-15 followed by Balochistan with 7 percent in 2019-20 as compare to 11 percent in 2014-15 and lowest rate of Diarrhoea has observed in Punjab and Khyber Pakhtunkhwa with 6 percent as compare to 9 and 10 percent in 2014-15 respectively. In Islamabad percentage of cases affected by diarrhoea is 2 percent 2019-20 as compare to 5 percent 2014-15. While observing the district level position Layyah with 18 percent, Larkana, Shahdadkot and Thatta with 16 percent, South Waziristan with 17 percent, Kech/Turbat with 20 percent have the highest percentage of cases reported with diarrhoea in last 15 days within their respective provinces (Table 4.6).

Overall 91 percent of diarrhoea cases a practitioner of some kind were consulted and 84 percent of children get ORS in diarrhoea cases 2019-20. Sindh with 93 percent rate of diarrhea consultation is at top and percentage of ORS to children is 94. Then Punjab and Khyber Pakhtunkhwa have 90 percent consultation rate and rate of ORS is 76 percent and 87 percent respectively in both provinces. Similarly, Balochistan with 86 percent consultation for diarrhea and 87percent children get ORS after diarrheal disorder. District level analysis reveals that Narowal with 66 percent, Sujawal with 50 percent, Abbottabad with 58 percent and Harnai with 27 percent have the lowest rate of consultation in their respected provinces. Whereas, rate of ORS is lowest in Chiniot 21 percent, Sujawal 71 percent, Shangla 24 percent and Harnai with 0 percent cases who reported use of ORS for treatment of diarrhoea (Table 4.7a & 4.7b).

In cases of diarrhoea, the most consulted practitioner constitutes to be a private practitioner with 50 percent in 2019-20 as compared to 73 percent in 2014-15. Government health sector has consulted 29 percent in 2019-20 as compared to 17 percent in 2014-15, Basic health units (BHU) and rural health centers (RHC) were consulted by 8 percent of the cases in Pakistan, which gives some indication of the very limited use of the government primary health network for these kinds of curative services. In Punjab 60 percent diarrhea cases received consultation from private dispensaries/hospitals whereas 34 percent received consultation from government facilities[2]. In Sindh 43 percent of diarrhea cases received consultation from private dispensaries/hospitals whereas 56 percent received consultation from government facilities. In Khyber Pakhtunkhwa consultation from private health facility is 39 percent and 50 percent get treatment from government facilities. Balochistan has 40 percent private consultation rate and 48 percent government facilities consultation rate. At district level Jhelum with 74 percent, Tharparkar with 95 percent, Khyber with 77 percent and Khuzdar with 100 percent are the districts where highest numbers of cases used government facilities for the treatment of diarrhea in their respective districts (Table 4.8).

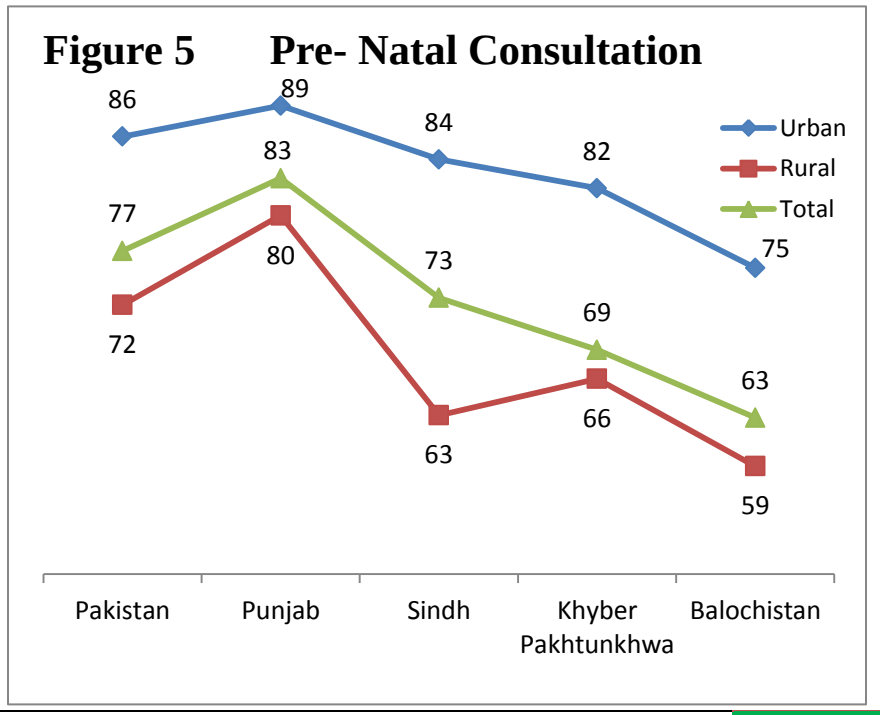

[2]hospitals, dispensaries, RHC, BHU, LHV, LHW, Nurse

4.4 Pre-Natal Consultation:

If a nation needs a healthy generation then they must pay best care to maternal health. Getting early and consistent check-up's ensure the chances of healthy baby and is very important to curb down level of complications at early stages. Prenatal care is the foundation of healthy pregnancy besides medication nutritional food and exercise is a healthy choice for a mother and baby, approximately a woman need 300 to 500 extra calories a day during this period, healthy snacks, fruits and vegetables are the best choice whereas, junk food, alcoholic drinks etc. can hurt the fetus and causing developmental disabilities and birth defects.

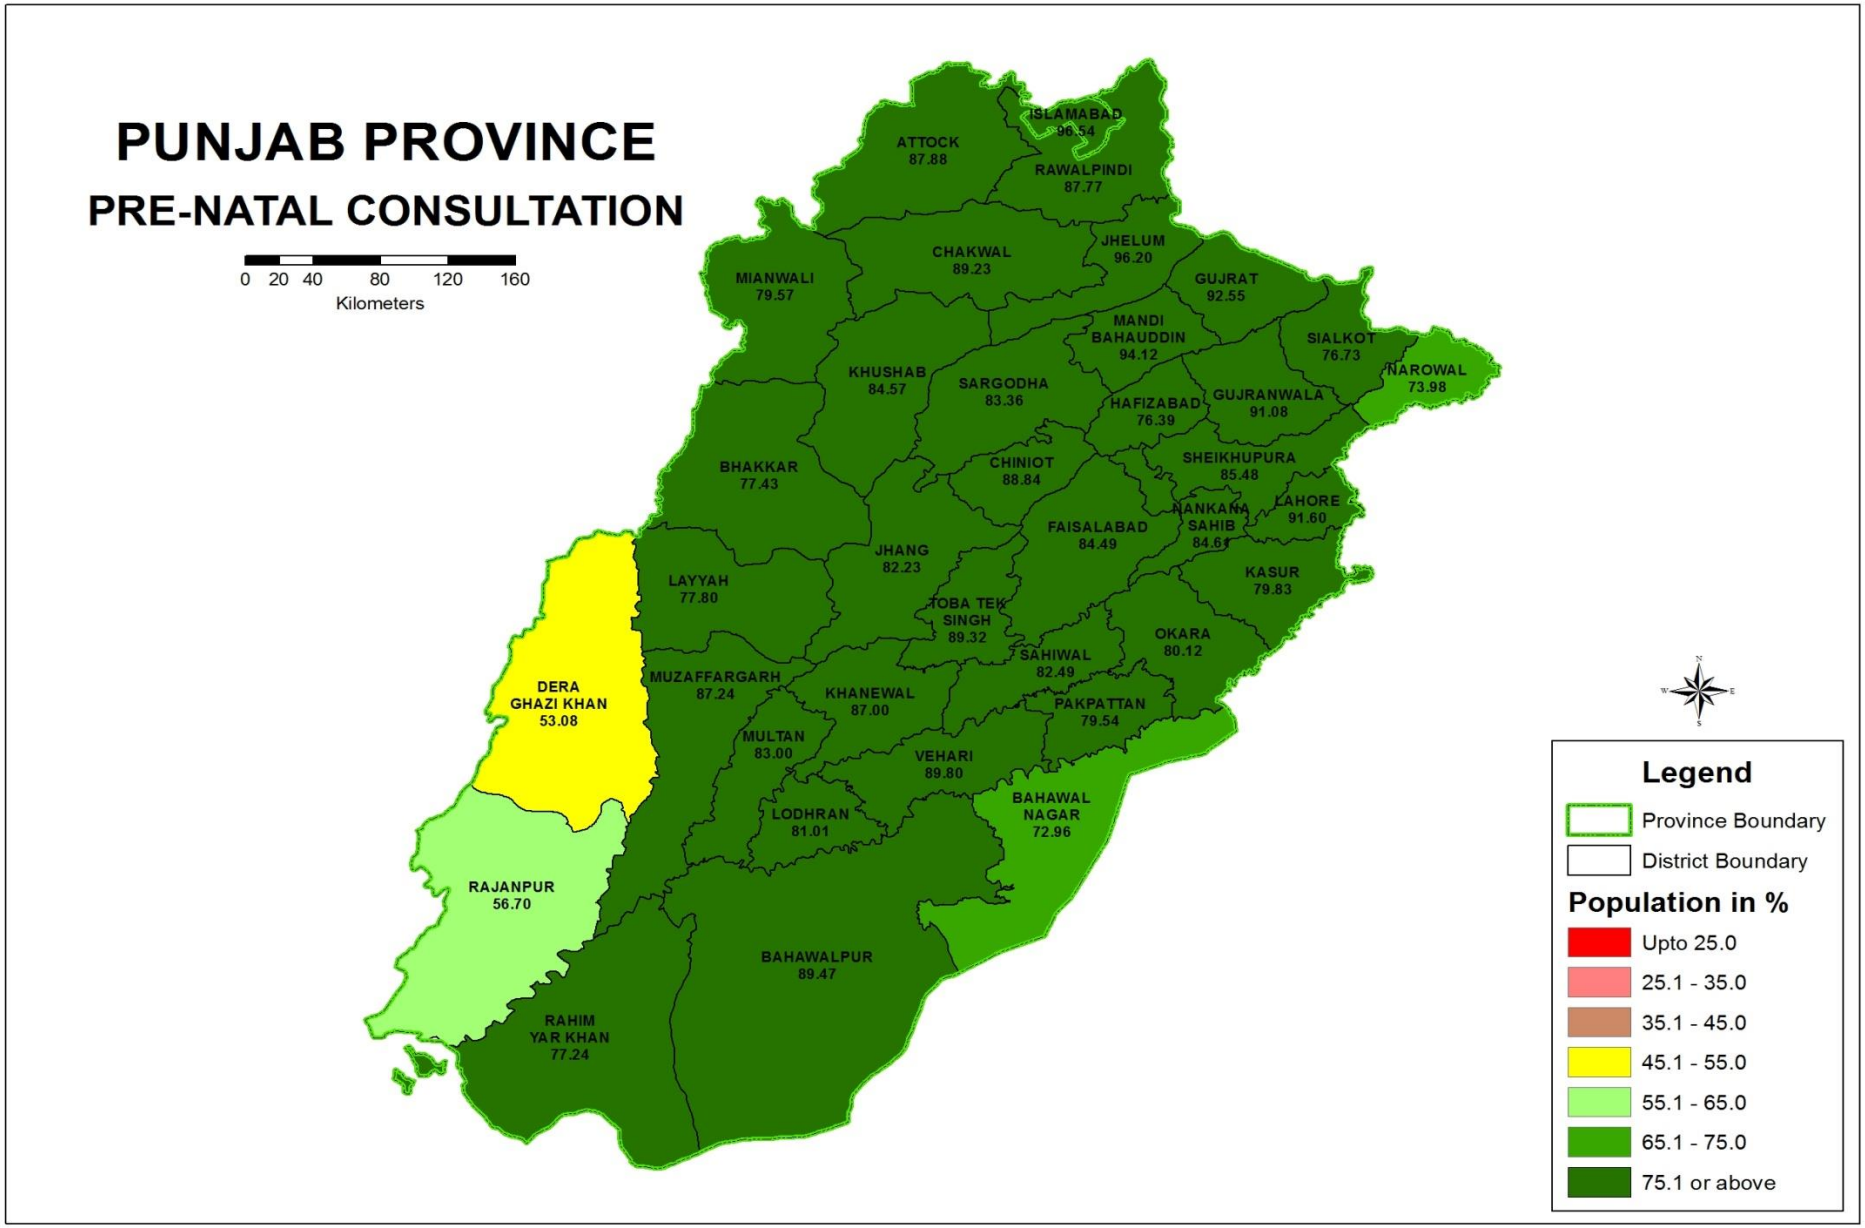

Prenatal is a debating topic in developing countries due to its predicted damages to new-born's like, pre-mature deliveries, low birth weight, toxin infectious deceases in mothers, eclampsia, chronic illness, blood deficiency and many other life threatening problems. Similarly, environmental and social challenges are of keen importance for a woman because stress establishes the foundation to abnormal new-born's and one of the basic reasons for still birth in the world.

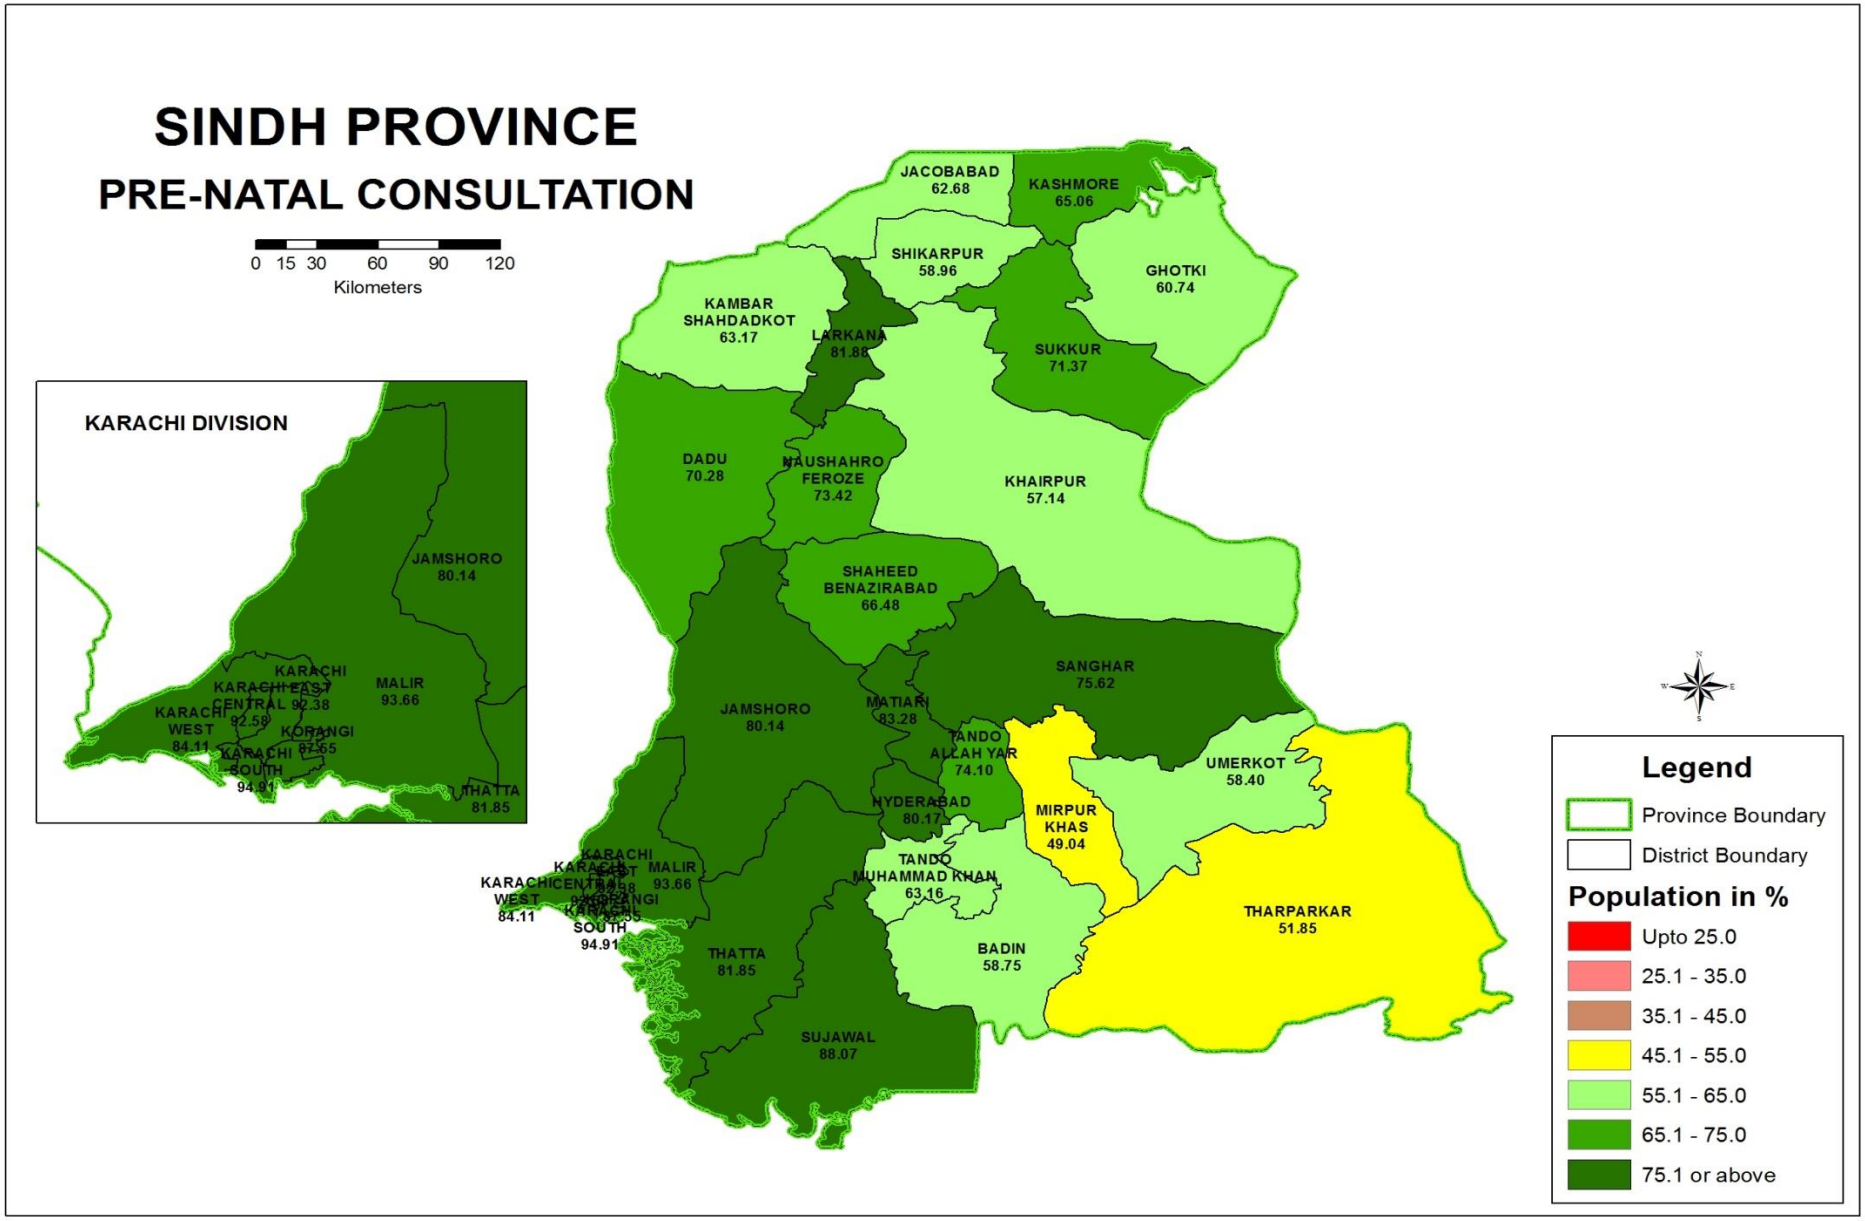

In Pakistan 77 percent of mothers who had given birth in the last three years went for pre-natal consultations during their last pregnancy in 2019-20 as compared to 73 percent in 2014-15. Pre-natal consultations have stagnant at 86 percent in urban areas but have increased to 72 percent in 2019-20 as compared to 67 percent in 2014-15 in rural areas. Punjab has the highest consultation rate with 83 percent in 2019-20 as compared to 78 percent in 2014-15 and Balochistan has the lowest with 63 percent in 2019-20 as compared to 47 percent in 2014-15. In Islamabad, 97 percent women went for pre-natal consultation. While observing the district level position, Jhelum with 96 percent, Karachi south with 95 percent, Orakzai with 89 percent, Sohbatpur with 88 percent are the top ranked districts within their respective provinces. While Dera Ghazi Khan with 53 percent, Mir Pur Khas with 49 percent, South Waziristan with 15 percent and Khuzdar with 5 percent are at the bottom within their respective provinces.

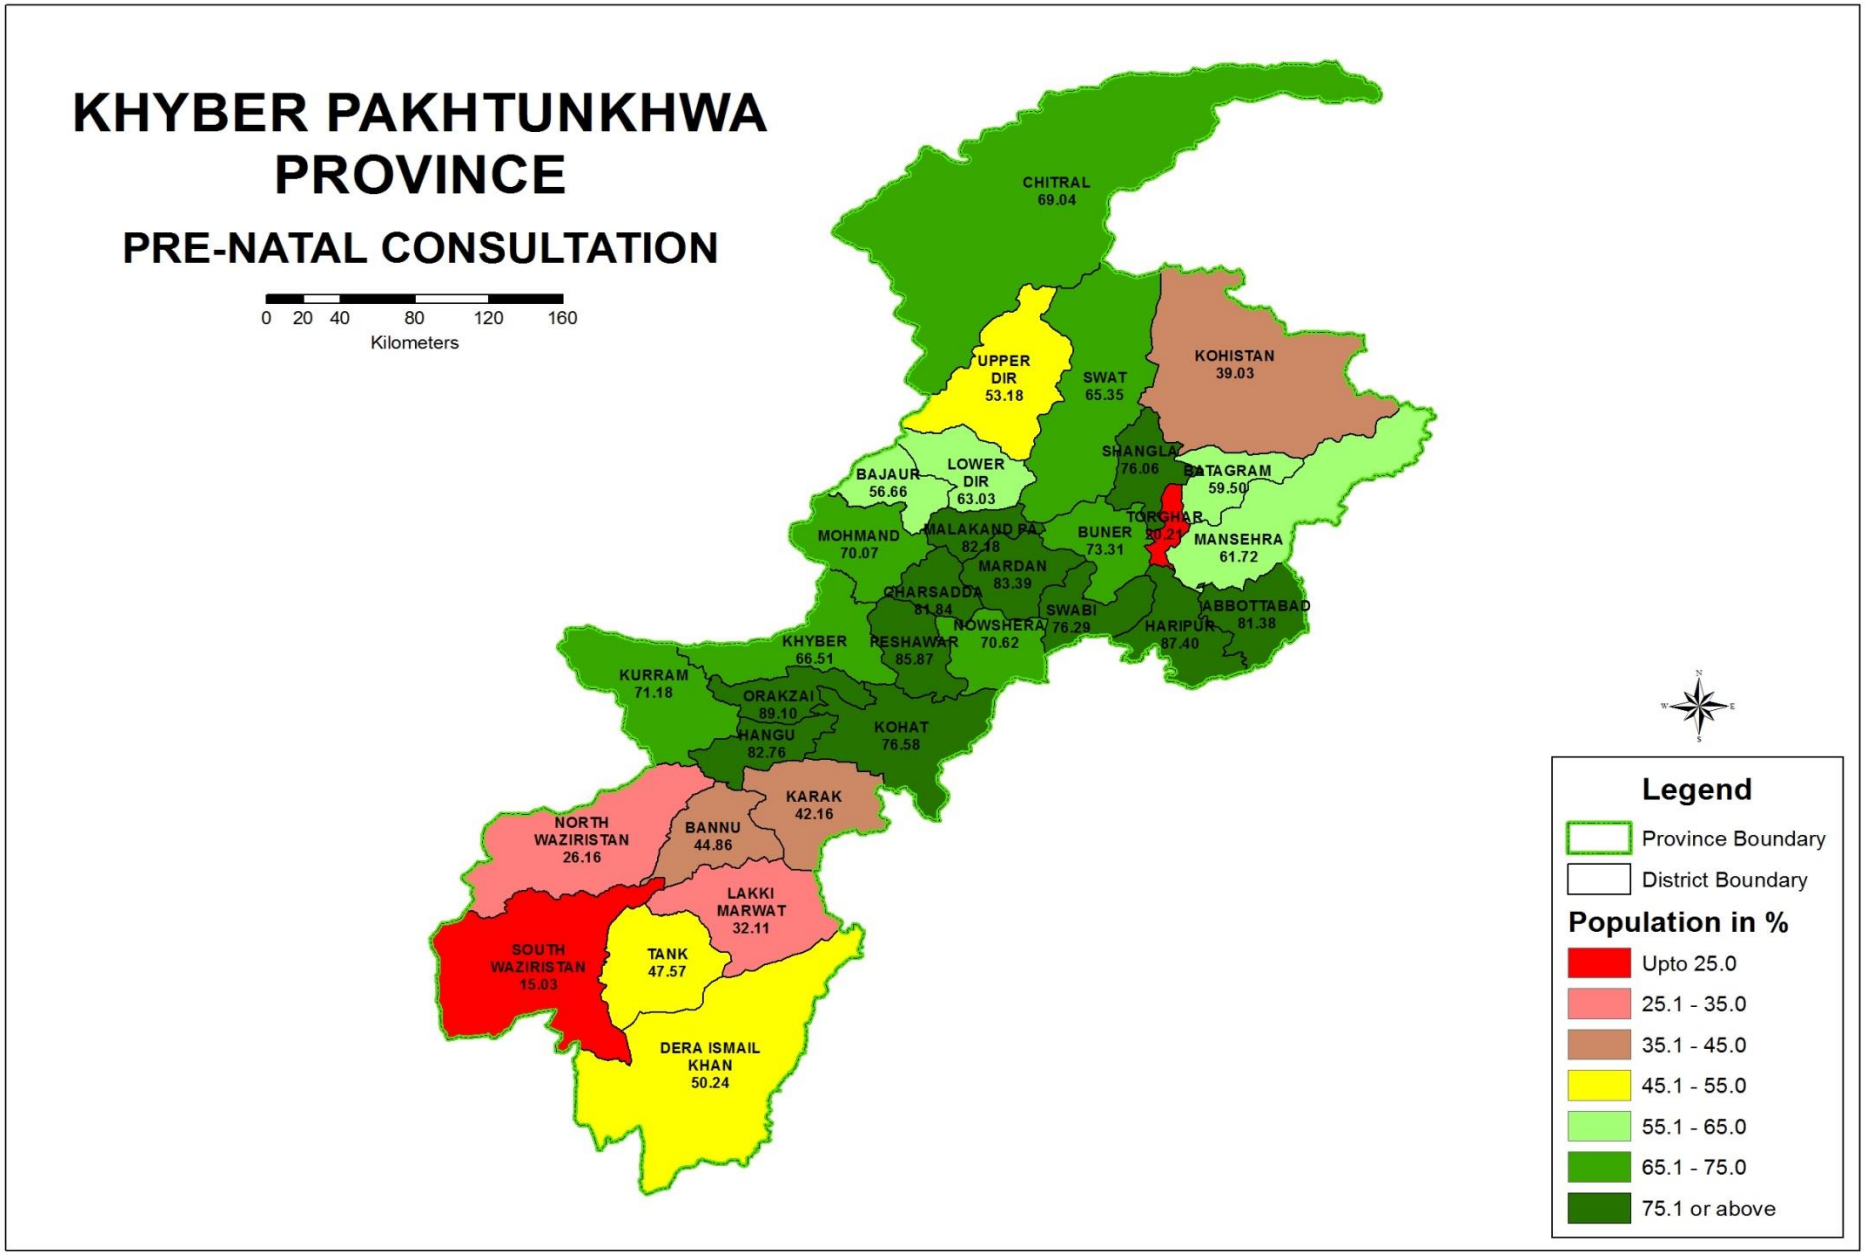

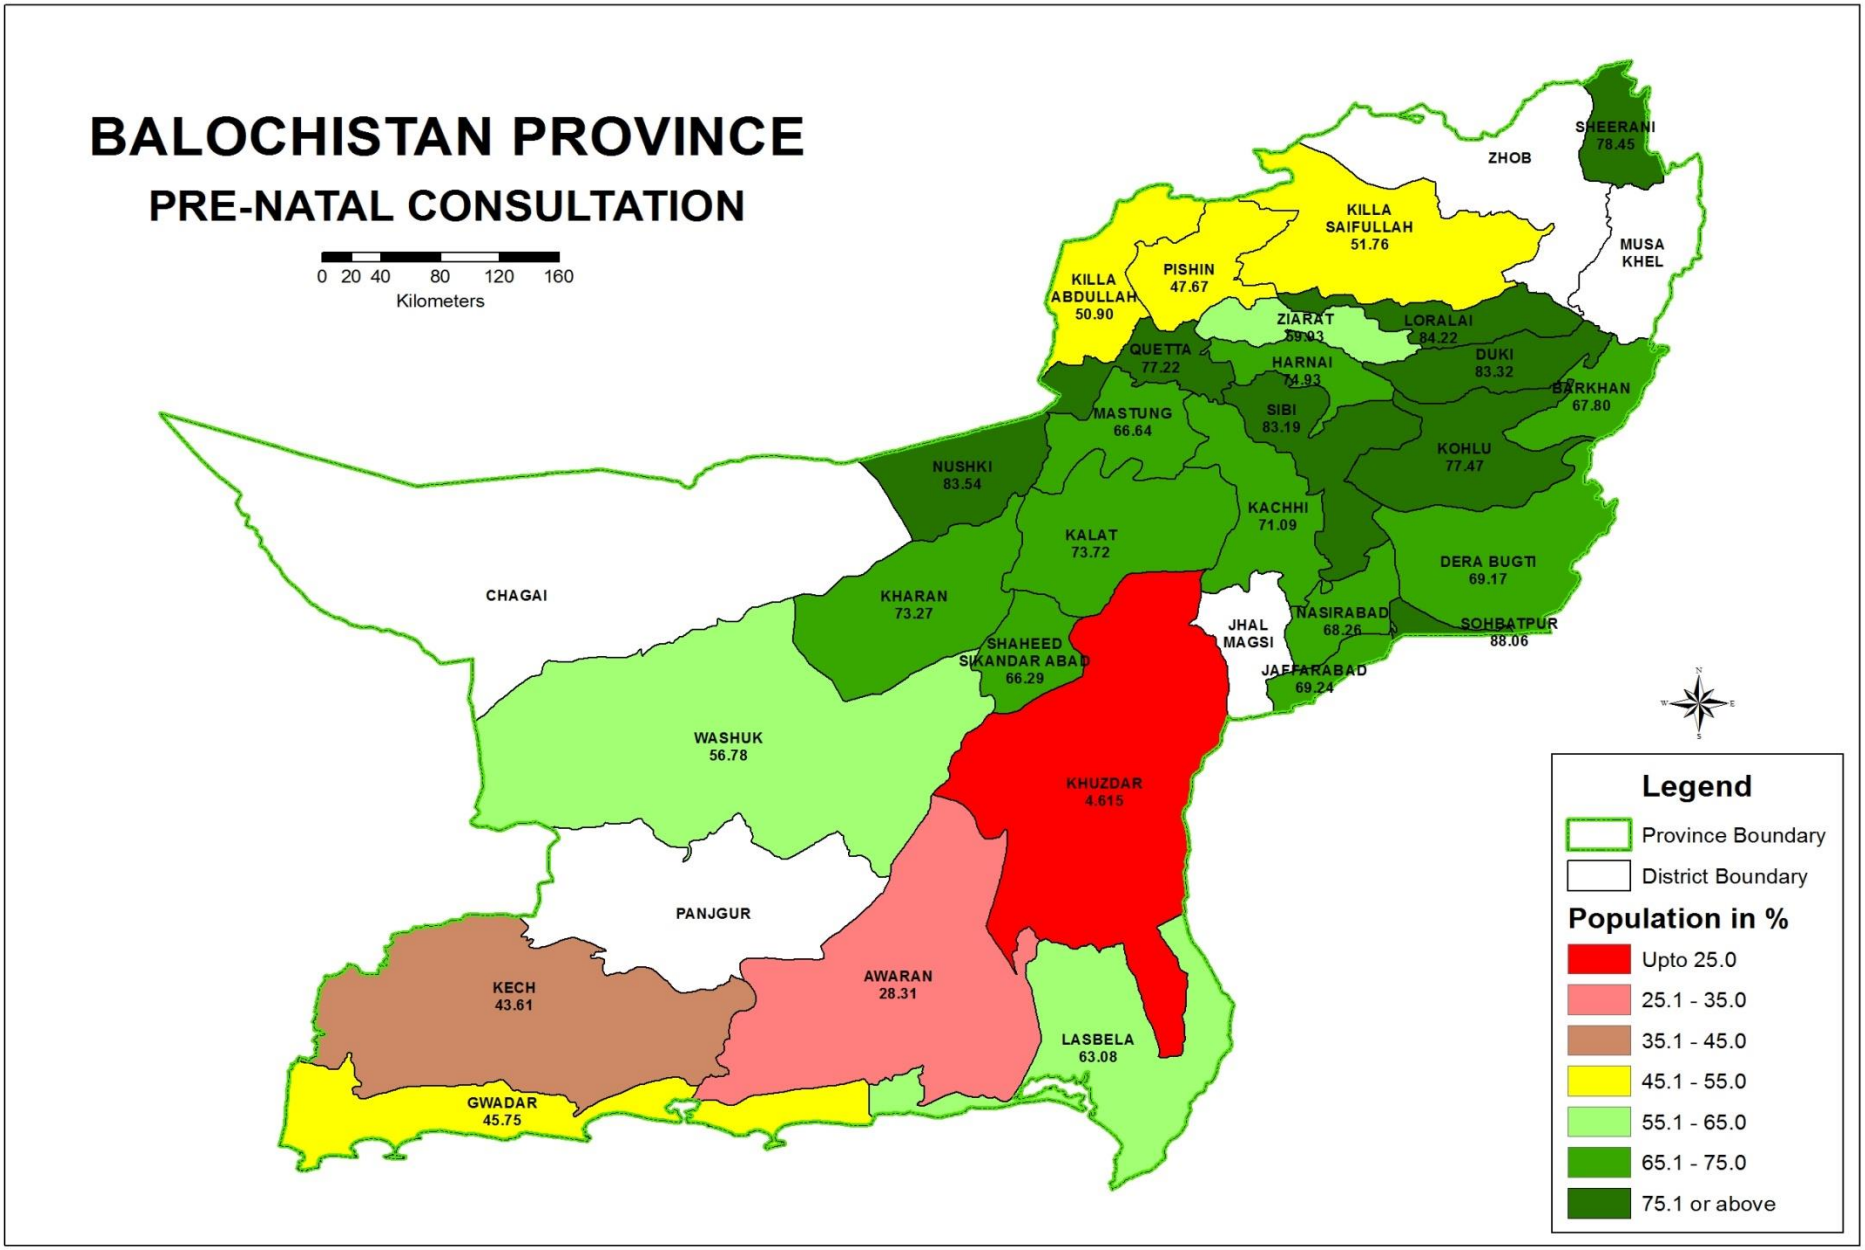

It is observed that in majority of districts of Punjab and Sindh women are seeking consultation from private hospital/clinic while the trend is reverse in Khyber Pakhtunkhwa and Balochistan where women in majority of districts went

to public hospitals for consultations. In Overall Pakistan, the four most commonly consulted sources for pre-natal care were private hospital/clinic with 47 percent, government hospital/clinic with 42 percent followed by home LHW with 4 percent and home LHV with 3 percent each (Table 4.9).

4.5 Tetanus Toxoid:

Neo Natal tetanus is one of the serious reasons in infant mortality. A woman received at least two doses of tetanus vaccine during pregnancy period protects their new-born against tetanus by developing 80 percent antibodies in first two months of life. If a woman received proper pre-natal consultation there should more than 95 percent chances that she must immunize with tetanus vaccine by health practitioner.

Overall 77 percent of mothers in 2019-20 as compared to 75 percent in 2014-15 had received a tetanus toxoid injection during their last pregnancy. Punjab is at top with 83 percent in 2019-20 as compared to 84 percent in 2014-15 and Balochistan is at bottom with 45 percent in 2019-20 as compared to 34 percent in 2014-15.

Figure 6 Tetanus Toxoid

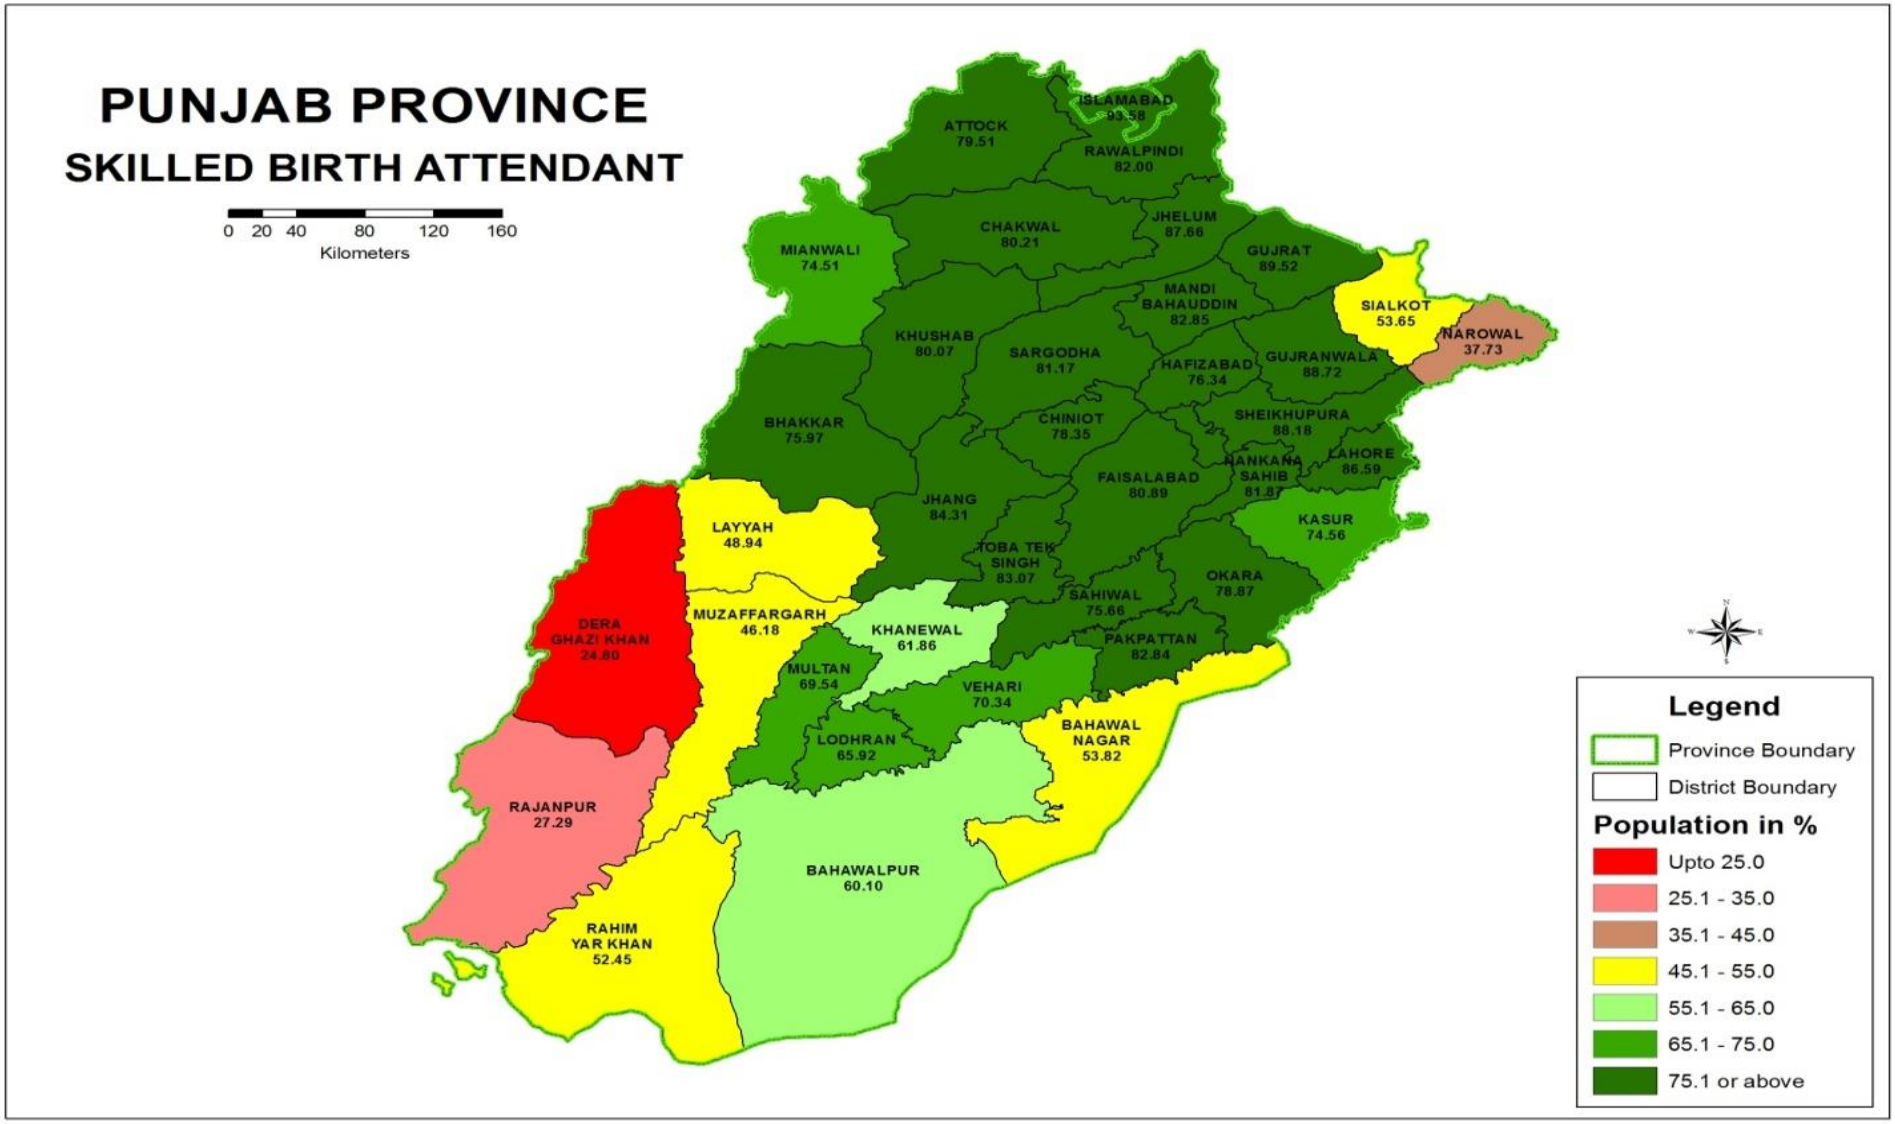

In Islamabad, 96 percent women received tetanus toxoid injections. While observing the district level position Sialkot with 99 percent, Kashmore with 100 percent, Chitral with 99 percent and Nushki with 96 percent are the top ranked districts with in their respective provinces (Table 4.10).

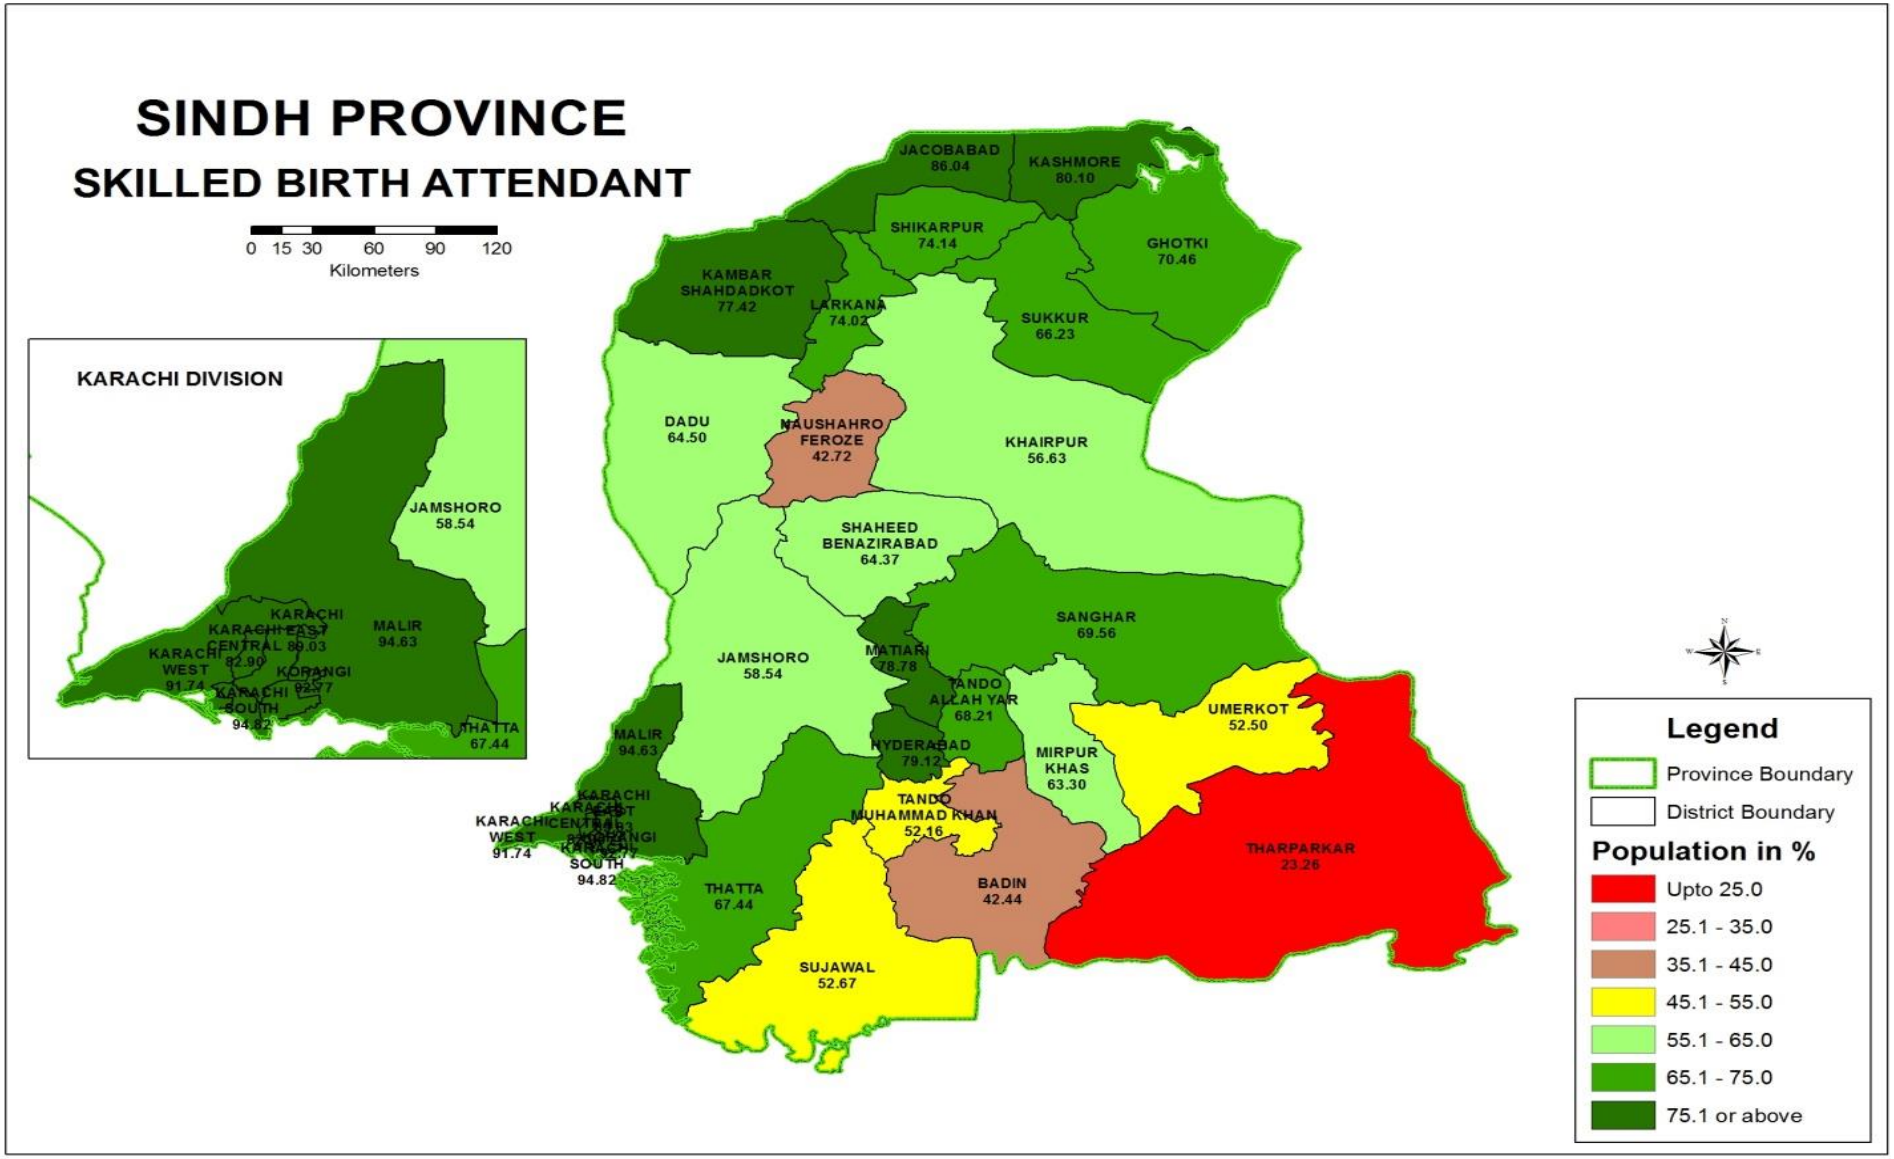

4.6 Skilled Birth Attendant:

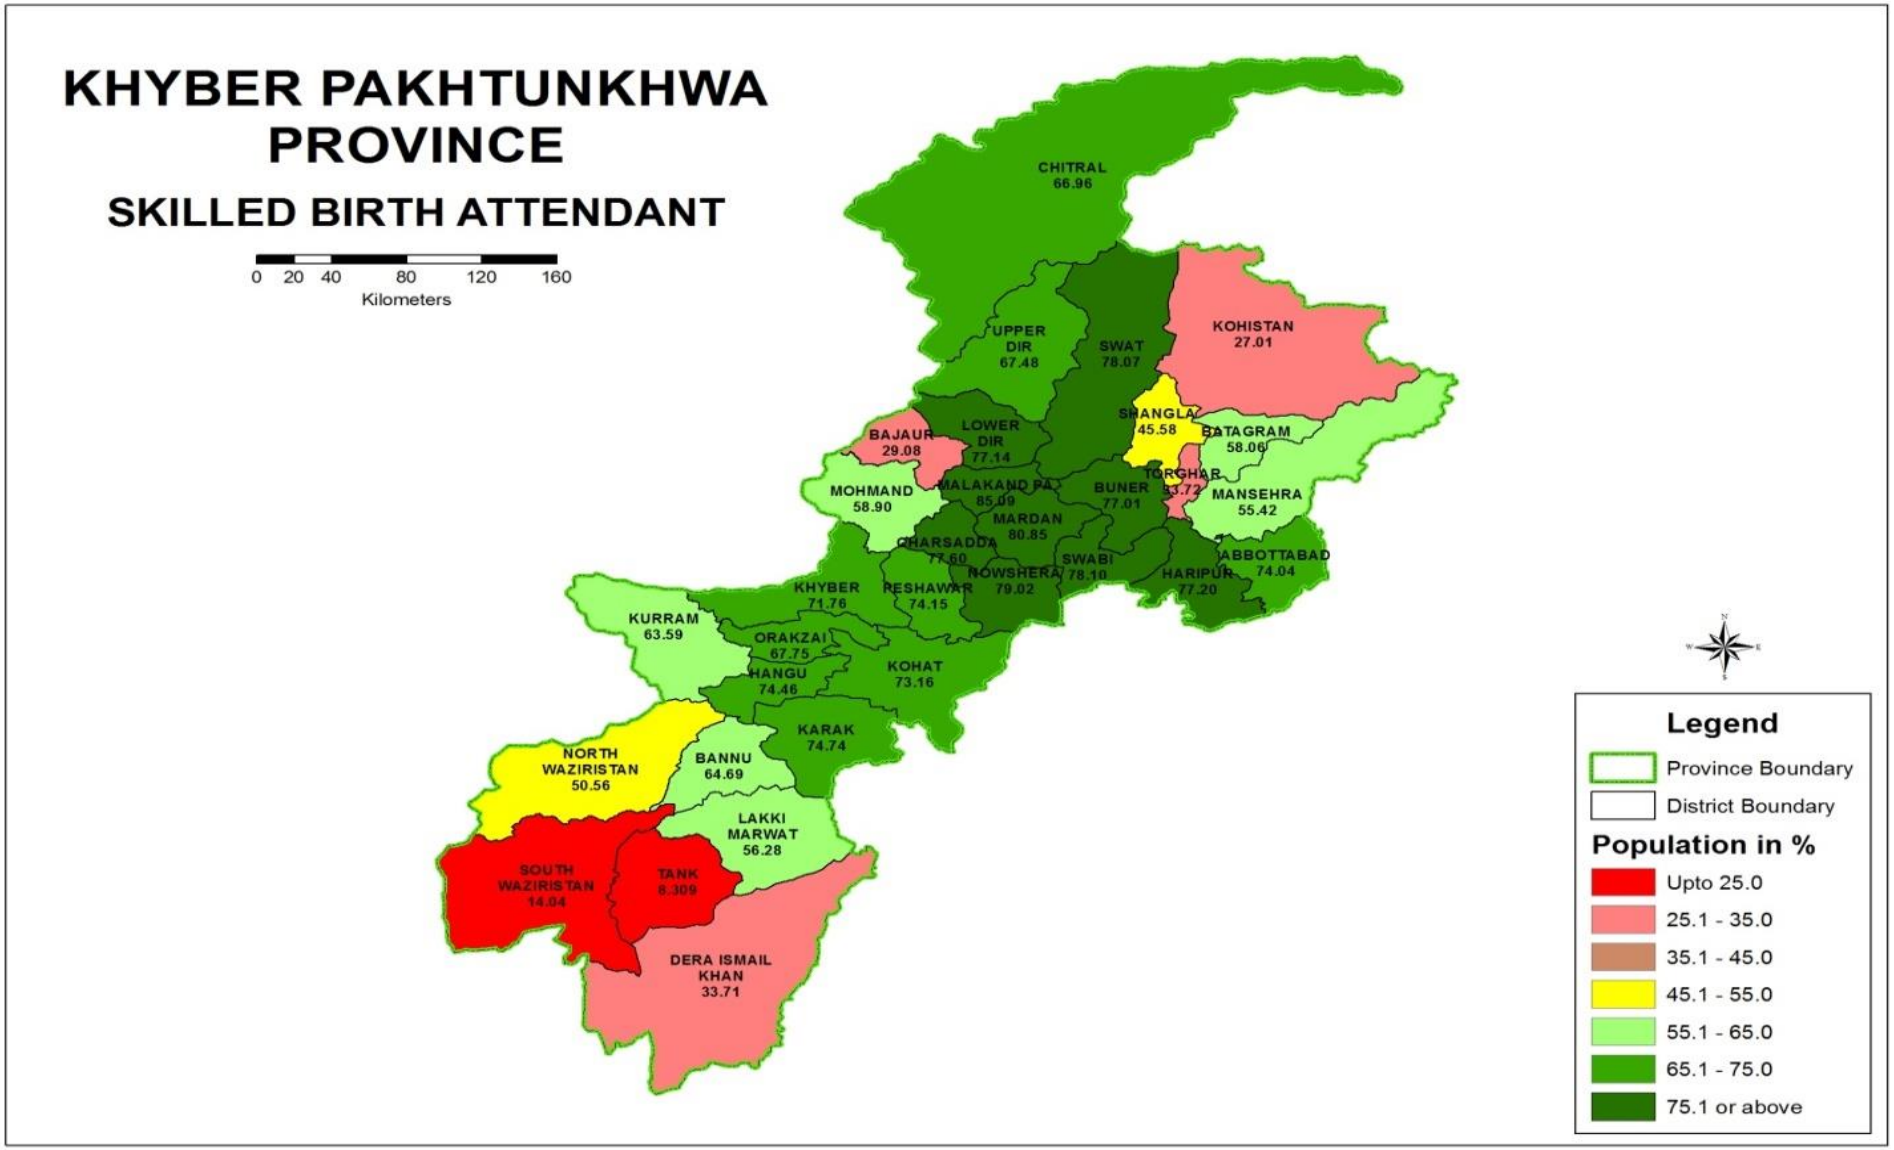

Delivery through skilled birth attendant plays crucial role to control child morbidity and mortality. In developing countries like Pakistan where health facilitation centre in rural and remote areas are very less in number have been facing the shortage of trained health staff at the time of delivery. Mostly, family members, relatives and local Dai's attend the woman at the time of delivery which is not able to handle any complexity and sensitivity at this life or death situation. Skilled Birth Attendants i.e. Doctor, Nurse, Midwife and LHV are fully trained and well equipped to solve multi-complex issues at one time. Every round of PSLM data illustrate that delivery assisted by skilled birth attendant is increasing in Pakistan which is a positive sign for our health sector indicators.

In Pakistan skilled birth attendants has increased to 68 percent in 2019-20 as compared to 58 percent in 2014-15. Among them majority of the deliveries were performed by the doctors in all four provinces. Percentage of deliveries assisted by doctors is highest in Sindh with 61 percent followed by Punjab with 55 percent, Khyber Pakhtunkhwa with 46 percent and Balochistan with 34 percent. While analysing district level position Gujrat with 90, Karachi Malir and Karachi South with 95 percent, Malakand with 85

percent and Duki with 86 percent are the top ranked districts with in their respective provinces who have obtained the services of skilled birth attendants for delivery cases. On the other side Dera Ghazi Khan with 25 percent, Tharparkar with 23 percent, Tank with 8 percent and Sohbatpur with 0 percent are the bottom ranked districts with in their respective provinces. Whereas, skilled birth attendants in Islamabad has been reported as 94 percent (Table4.11).

4.7 Post-Natal Consultation:

Post-Natal care is the number of visits a mother and her new-born needs in two to six weeks after delivery sometimes health visitors like LHV, LHW etc. visits the woman and baby at home to provide different medications and suggestions according to their medical condition. But, unfortunately in Pakistan women and her family couldn't provide much attention to post-natal care as they are concerned with pre-natal consultation which is one of the main reasons of neo-natal mortality. Different studies and gynaecologist suggests that in post-natal period mother and her infant needs as much attention as they required in pre-natal period because after birth there are physical as well as medical changes arise in mother which needs to be properly treated by expert dieticians and doctors.

There should be counselling sessions between mother and gynaecologist during pre-natal period on the importance of first six weeks after delivery. The doctor should ensure her patient to use sterilize and hygienic products, proper hand washing, quality and fresh food items and the way to identify any critical condition as early as possible and go to nearby health facility to get required treatment.

Post-natal consultation in 2019-20 has increased to 39 percent as compare to 29 percent in 2014-15 which is an encouraging signal but it's still much lower than the pre-natal consultation rates In Pakistan. Post-natal consultation is higher in urban areas with 48 percent as compared to rural areas with 35 percent. In Islamabad, 66 percent women visited for post-natal consultations. While observing the district level position, Layyah with 68 percent, Larkana with 74 percent, Tank with 49 percent and Nushki with 71 percent are the top ranked districts for post-natal consultations within their respective provinces (Table 4.12a).

The most commonly visited sources of post-natal care in urban areas as well as rural areas were private hospital/clinic with 56 percent and 47 percent respectively followed by government hospital/clinic with 36 percent and 37 percent respectively in both urban areas and rural areas (Table 4.12b).

Following graphs show the comparison of major health indicators of provinces as well as comparison of major cities i.e. Islamabad, Lahore, Karachi, Peshawar, Quetta to summarize current situation of health sector in Pakistan.

NOTES:

1. Note that even the record-based measure cannot be based exclusively on vaccinations recorded on the health card, since it is not possible to identify the source of the information on each antigen. Instead, it is calculated for all children who had a health card, using all immunizations reported, whether or not these were recorded on the card. It is likely that most will have been recorded on the card.
2. Full immunization means that the child has received: BCG, DPT1, DPT2, DPT3, Polio1, Polio2, Polio3, H.B1, H.B2, H.B3 and measles .

NOTES:

1. Note that even the record-based measure cannot be based exclusively on vaccinations recorded on the health card, since it is not possible to identify the source of the information on each antigen. Instead, it is calculated for all children who had a health card, using all immunizations reported, whether or not these were recorded on the card. It is likely that most will have been recorded on the card.
2. Full immunization means that the child has received: BCG, DPT1, DPT2, DPT3, Polio1, Polio2, Polio3, H.B1, H.B2, H.B3 and measle

NOTES:

1. Diarrhoea cases where ORS was administered to the child expressed as a percentage of all diarrhoea cases during the past 30 days in children under 5 years.
2. Cases where ORS was administered: For all children that reported an episode of diarrhoea in the past 30 days, the mothers were asked if ORS had been given to the child. The statistics reported here represent the percentage of cases where ORS was given to the child.

1. The Panjgur,Chaghi,Musa Khel,Zhob and Jhal Magsi districts have been dropped from the scope of the survey

5. Function Limitation and disability

Disability is a complex and dynamic process that presents considerable challenges for data collection. The definition of disability has changed over time and is currently conceptualized as the outcome of the interaction between a person with a functional limitation (difficulties doing basic functional activities) and an unaccommodating environment resulting in the inability to fully participate in society. Thus, to provide complete information on all aspects of disability would require extensive and detailed data collection on almost all aspects of life including body structure and function. Keeping in view these facts PSLM 2019-20 disability module comprises of 6 questions from Washington group disability module.

Table 5.1: Distribution of Functional Limitation by Functional Activities

Functions of Body	No Difficulty	Some Difficulty	A lot of Difficulty	Cannot do at all	Total
Seeing	96.4	2.9	.5	.2	100.0
Hearing	97.5	1.8	.4	.3	100.0
Walking or Climbing Steps	94.0	4.0	1.5	.5	100.0
Concentration	97.5	1.9	.4	.2	100.0
Washing all over or Dressing	97.7	1.6	.5	.2	100.0
communication	98.4	1.0	.3	.3	100.0

It is observed from data that 10.69 percent population of 5 years of age and above is suffering with functional limitation at least one disability. By adding cannot do at all and a lot of difficulty we have disable proportion of population i.e. 3.41.

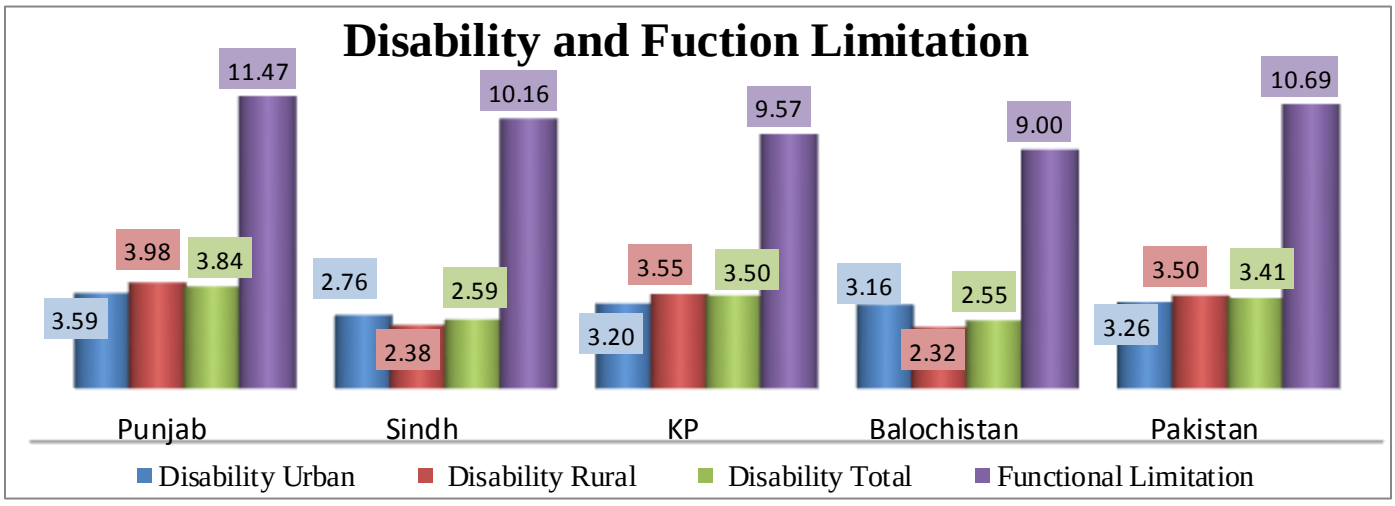

Table 4.2 : Function ability by Age group, Province and Region

6. Migration

Along with many other problems inter and intra province migration is a vast challenge faced Pakistan since last decades. Urbanization is the major cause of migration from rural or less developed areas to urban areas. Every person or family behave rationally to acquire better living standards along with professional career opportunities, best possible education standards and social and economic security; these measures are available at very few places in Pakistan due to which there is an excavated boost up in the number of migrants towards those cities. As a result, resources in those cities become scarce and resultantly also increase in pollution; pressure on food supply system etc.

In case of Pakistan migration towards areas of better opportunities is the outcome of backwardness in agriculture sector, floods, poor infrastructure, low wage rate, lack of job opportunities in less developed areas, war against terror, foreign sanctions on our agriculture export goods and low return to farmers on their crops etc. To capture the situation of Migration first time a module on the recommendations of Governing Council has been added in PSLM survey 2019-20. A person is called migrated, if he/she is born in one district and at the time of interview living in another district.

According to the results, in Pakistan total migration prevalence is 6 percent. Punjab with 7 percent is the highest rate of migration followed by Sindh with 6 percent and Khyber Pakhtunkhwa and Balochistan with 4 percent rate of migration.

This table shows inter and intra provincial migration across provinces; illuminating that rate of migration within the Punjab is 83 percent, migration form Punjab to Sindh is 5 percent, from Punjab to Khyber Pakhtunkhwa is 12 percent and from Punjab to Balochistan is 1 percent. Similarly, migration within the Sindh and Balochistan is 59 percent and the highest rate of migration within the province is in Khyber Pakhtunkhwa with 91 percent. It is observed that Khyber Pakhtunkhwa has more opportunities than other provinces due higher rate of Inter and Intra migration. If a person migrated from one district to another district of same province then this migration is consider as Intra migration. While, migration from one district of a province towards district of some other province is called Inter migration. Table 6.2 displays overall migration as well as intra and inter migration in provinces and their major cities.

Table 6.1 Province to province migration in Pakistan

Quetta	88	12	6	5
Loralai	96	4	2	2

Punjab has the highest rate of Intra province migration i.e. migration within province from one district to other or from rural to urban is 6 percent whereas only 1 percent people migrated to other provinces. Migration rate is highest in Federal Capital i.e. 36 percent, whereas migration from other Provinces to Islamabad is 19 percent and migration from districts of Punjab to Islamabad is 17%. The above table displays that Intra provincial migration is higher than Inter Provincial migration in all the four provinces. Top and bottom district of each province where migration from other districts took place has been displayed in this table. Punjab with Islamabad, Sindh with Karachi East, Khyber Pakhtunkhwa with Peshawar and Balochistan with Quetta are the top most districts with respect to rate of migration in all provinces.

Table 6.3 Migration towards top and bottom districts of each province

7. WATER SUPPLY, SANITATION, HYGIENE & HOUSING

7.1 Introduction

Water is essential to sustain life; therefore, an adequate, safe and accessible supply must be available to all. Access to safe drinking water is essential for health; it is a basic human right and can result in tangible benefit to health. Provision of safe drinking water and basic sanitation coupled with personal hygiene are recognized as an essential component for promoting healthy living. Failure to ensure drinking water safety and proper sanitation system may expose the community to the risk of outbreak of infectious diseases.

The Government of Pakistan, while recognizing that access to safe drinking water is the basic human right for every citizen and to ensure its provision to all citizens is the responsibility of the state. Therefore in order to fulfil this commitment, Government has formulated the National Drinking Water Policy 2009[1] and National Sanitation Policy in 2006[2] through a countrywide consultation process with aim to increase public awareness about water safety, safe hygiene practice and water conservation. UN adopted Sustainable Development Goals (SDGs) as Development Agenda in 2015 by considering ground realities and for monitoring and reporting of SDGs, PSLM questionnaire on Water, Sanitation & Hygiene Module has been reviewed by Technical Committee. Questions were reviewed in each area and necessary amendments were made accordingly. Questions regarding Source of Water for cooking and hand washing, Hygiene, Sharing of Toilet, Fuel used for Heating have been included on recommendations of Committee to capture above mentioned indicators. Later on PSLM district level Survey 2019-20 monitor the situation of onsite treatment of faecal sludge.

Goal 6 put special emphasis on Water, Sanitation and Hygiene. Therefore the indicator such as SDGs 6.1.1 and 6.2.1 related to access of population to Safely Managed Drinking Water and Safely Managed Sanitation Services, SDGs Goal 7 related to access to affordable, reliable, sustainable and modern energy, SDGs 7.1.1, Proportion of population with access to electricity and SDGs whereas 7.1.2, pertain to Proportion of population with primary reliance on clean fuels and technology and the same are reported in this chapter[3].

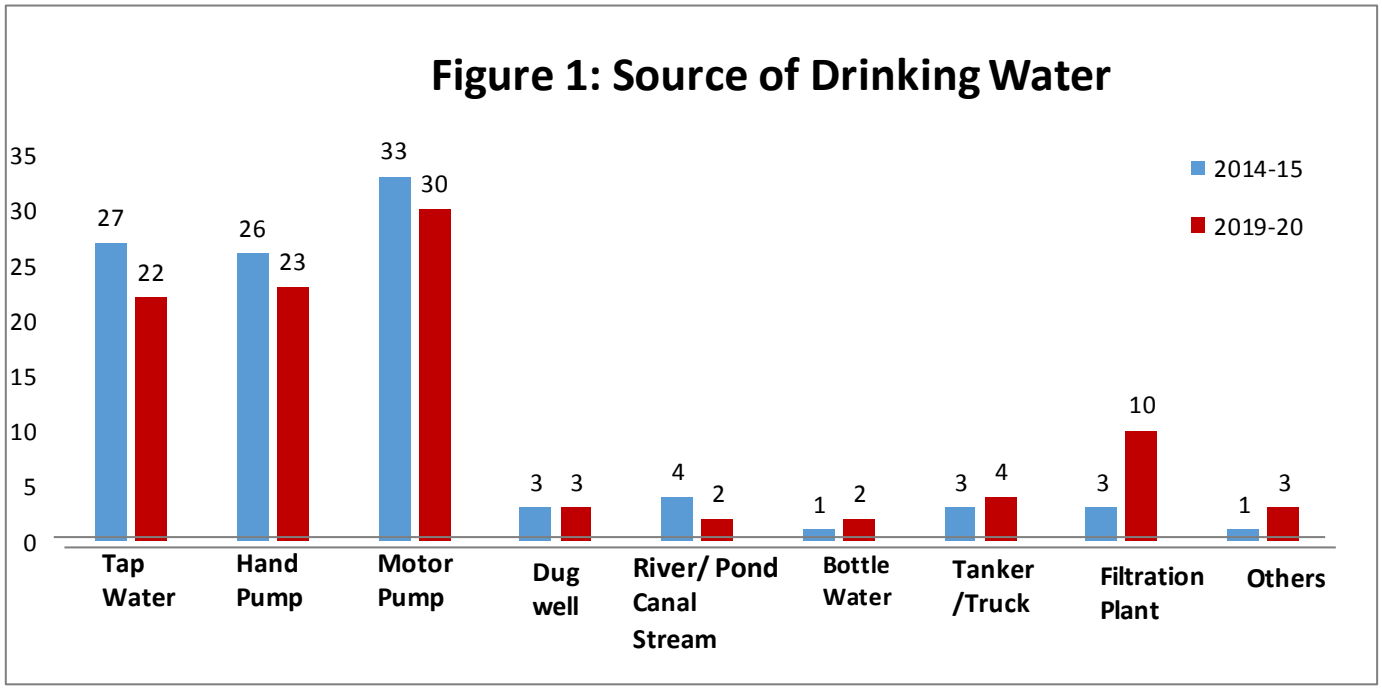

7.2 Main Source of Drinking Water

In PSLM 2019-20 survey, information has been collected from households about the main source of drinking water. Accordingly the categories including Tap Water, Motorized Pump, Hand Pump, Dug Well, Spring, Bottle Water, Filtration Plant and Tanker/Truck/Water bearer.

[1] National Drinking Water Policy 2009
[2] National Sanitation Policy 2006
[3] www.undp.org/content/undp/en/home/sustainable-development-goals

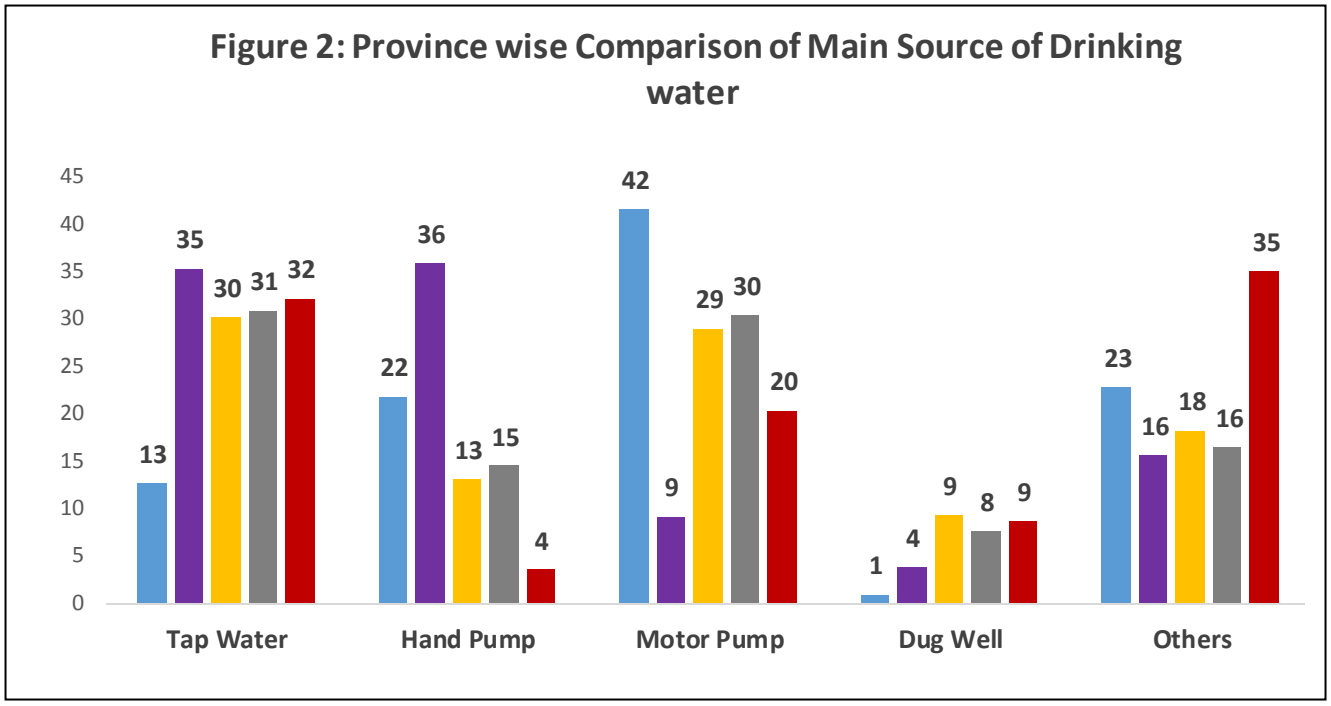

Tap water is a delivery system; where the water is transported by a pipeline network from its collection point to the user and also treated before it is further supplied. In urban areas, generally water comes into house through pipes and is stored in tanks built with in the house, then the water for the use of households is lifted to small tanks built at the roof top of the house, such system should be recorded as tap water supply. Hand Pump is a pump operated manually to draw water from a bored hole. Dug well is of two types, Opened or Closed Well.

In Pakistan, 30 percent of household are using Motorized pumping as main source of drinking water in 2019-20 as compared to 33 percent in 2014-15 followed by Hand Pump with 23 percent in 2019-20 as compared to 26 percent in 2014-15 and Tap Water with 22 percent in 2019-20 as compared to 27 percent in 2014-15. Tap Water with 36 percent is the main source of drinking water in urban areas. Motorized pump with 34 percent is the main source of drinking water in rural areas whereas; Increase has been observed in Filtration Plant to 10 percent in 2019-20 from 3percent in 2014-15. Major increase has been observed in urban areas with respect to filtration plant to 19 percent in 2019-20 from 6 percent in 2014-15. (Figure 1, Table 7.1).

Provincial level comparison shows that the vast majority of the population of Punjab i.e. 63 percent has water either from Hand Pump or Motor Pump, followed by Tap Water with 13 percent. **In Punjab, the use of Motorized Pump has been decreased to 42 percent in 2019-20from 45 percent in 2014-15 but increase has been observed in Filtration Plant as source of drinking water with 18 percent as compare to 5 percent in 2014-15.** Sindh has shown as slight increase in term of Hand Pump i.e. 36 percent in 2019-20 as compared to 34 percent in 2014-15 and decreasing trend from 41 percent to 35 percent in terms of Tap Water. In Khyber Pakhtunkhwa, main source of drinking water is Tap water with30 percent in 2019-20 which has been decreased

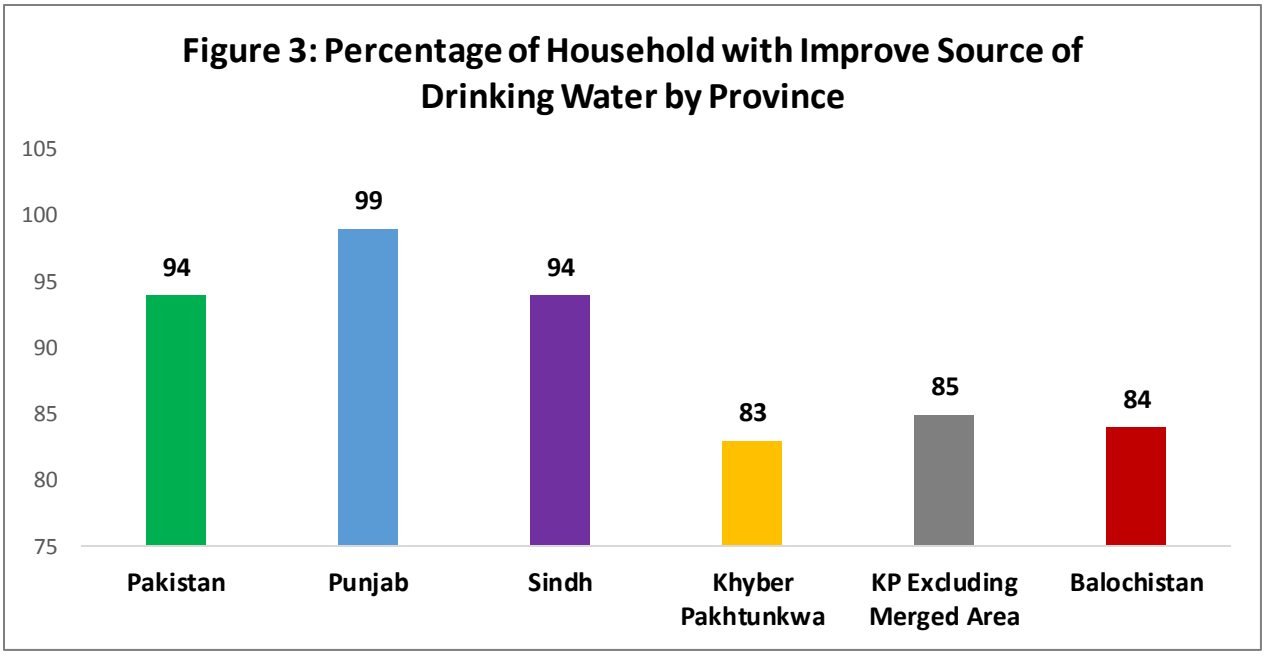

from 35 percent in 2014-15. In Balochistan, the main source of drinking water is Tap Water with 32 percent in 2019-20 as compared to 33 percent in 2014-15.In Islamabad 42 percent household are using motor pump as a main source of drinking water as compared to 43 percent in 2014-15,while comparing district Chakwal 76 percent, Larkana 33 percent, Mardan 59 percent and Duki with 84 percent are the top ranked district for using Motor pump as a main source of drinking water whereas district Lahore 14 percent, Karachi 1 percent ,Kohistan 0 percent and Gwadar with 0 percent are the bottom ranked district for using Motor pump as a source of water within respective province.

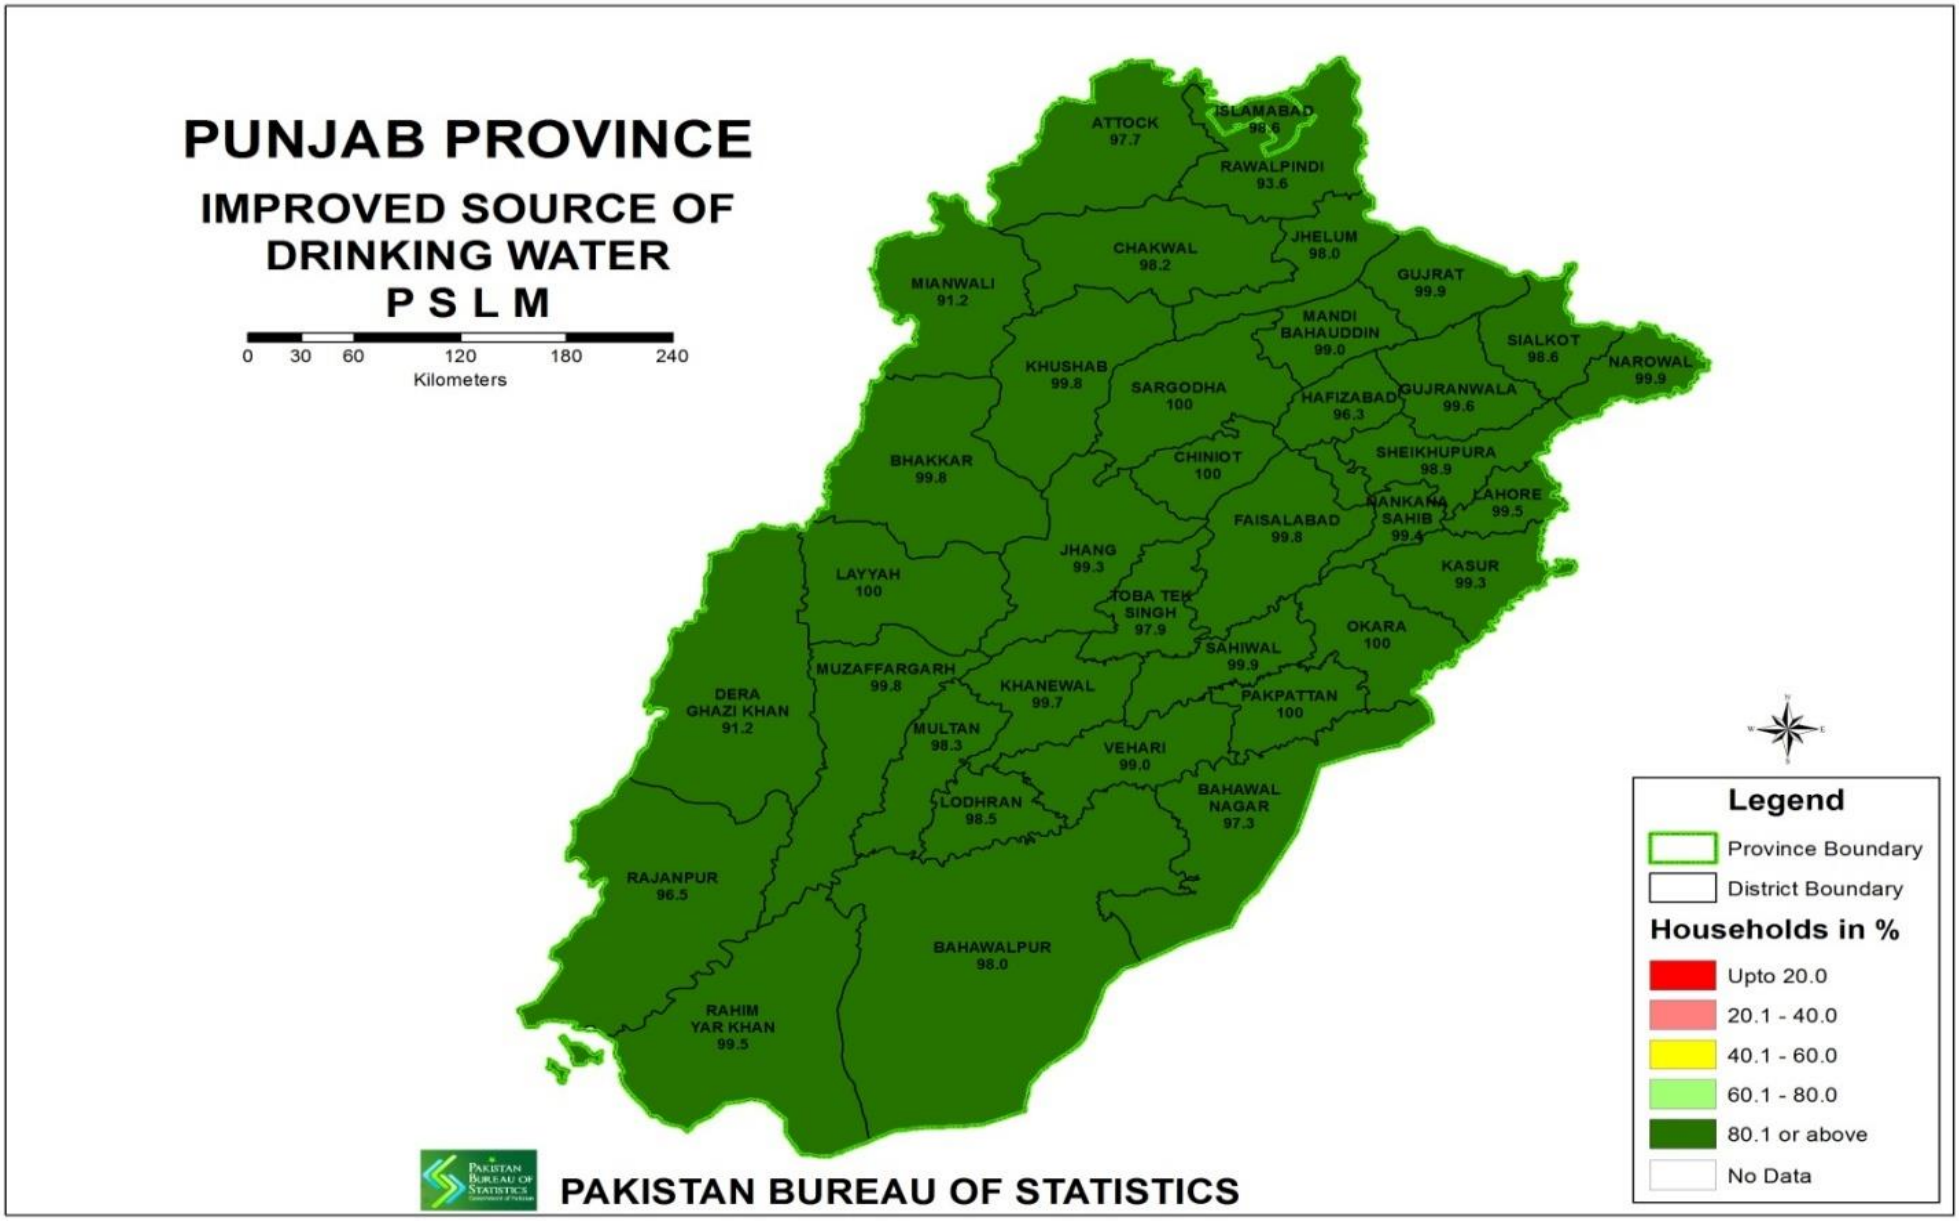

While comparing district about Tap water as a main Source of water , In Islamabad 26 percent household are using Tap Water as a main source of drinking water as compare to 20 percent in 2014-15. Bahawalnagar with 39 percent, Karachi Malir 82 percent, Tor Ghar with 75 percent and Gwadar 82 percent are the top ranked district for using Tap water as main source of drinking water within their respective provinces. On the other hand Layyah 1 percent, Larkana 0 percent, Bajur 3 percent and Shaheed Skindarabad 0.3 percent are the bottom ranked district within respective provinces.

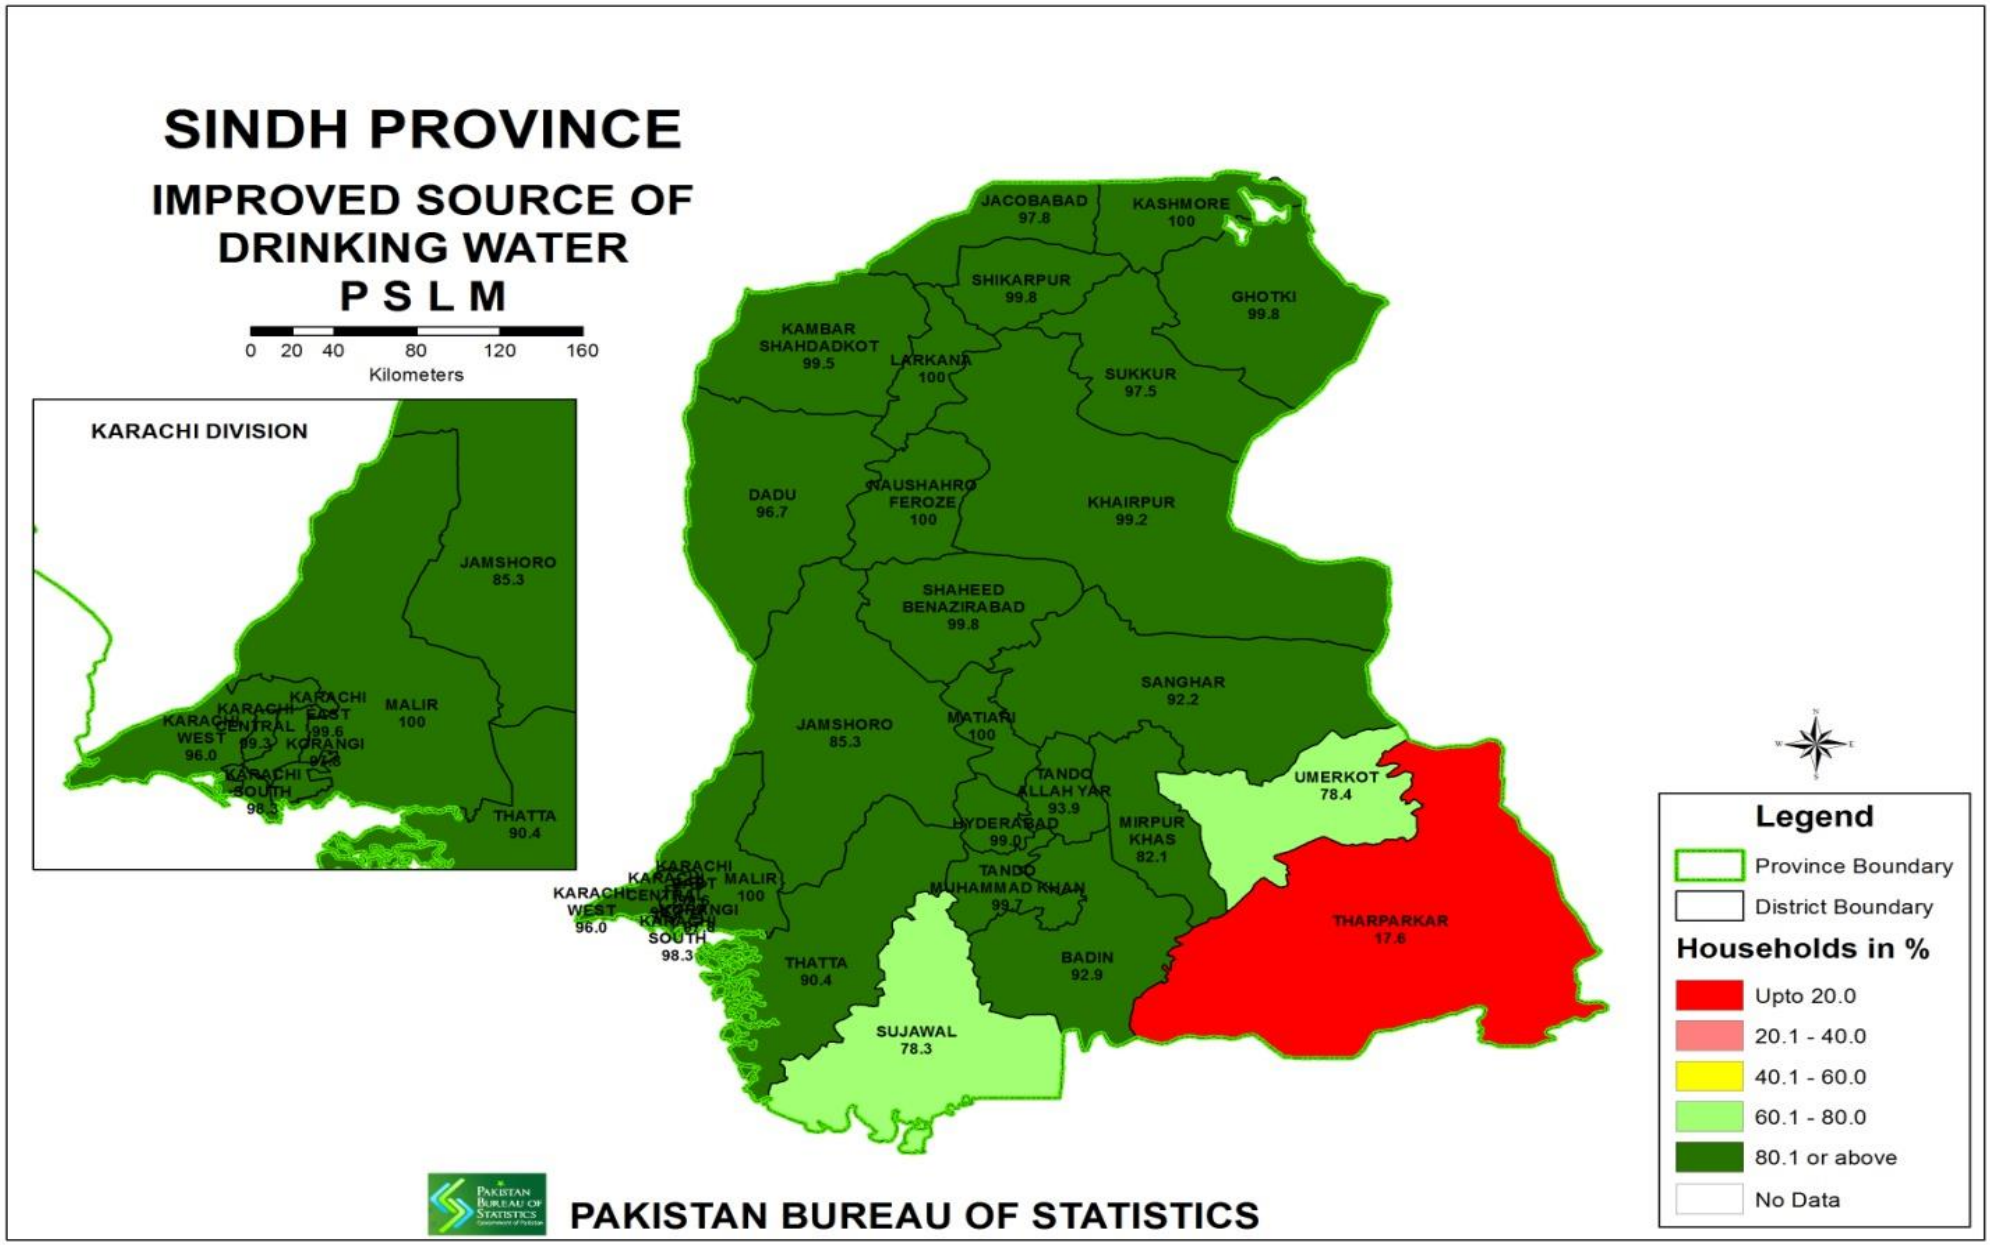

7.2.1 Improved Source of Drinking Water: Indicator is calculated as per definition of SDGs which includes Tap Water, Hand pump, Motor Pump, Dug Well Protected, Spring Protected, ,Bottle water,

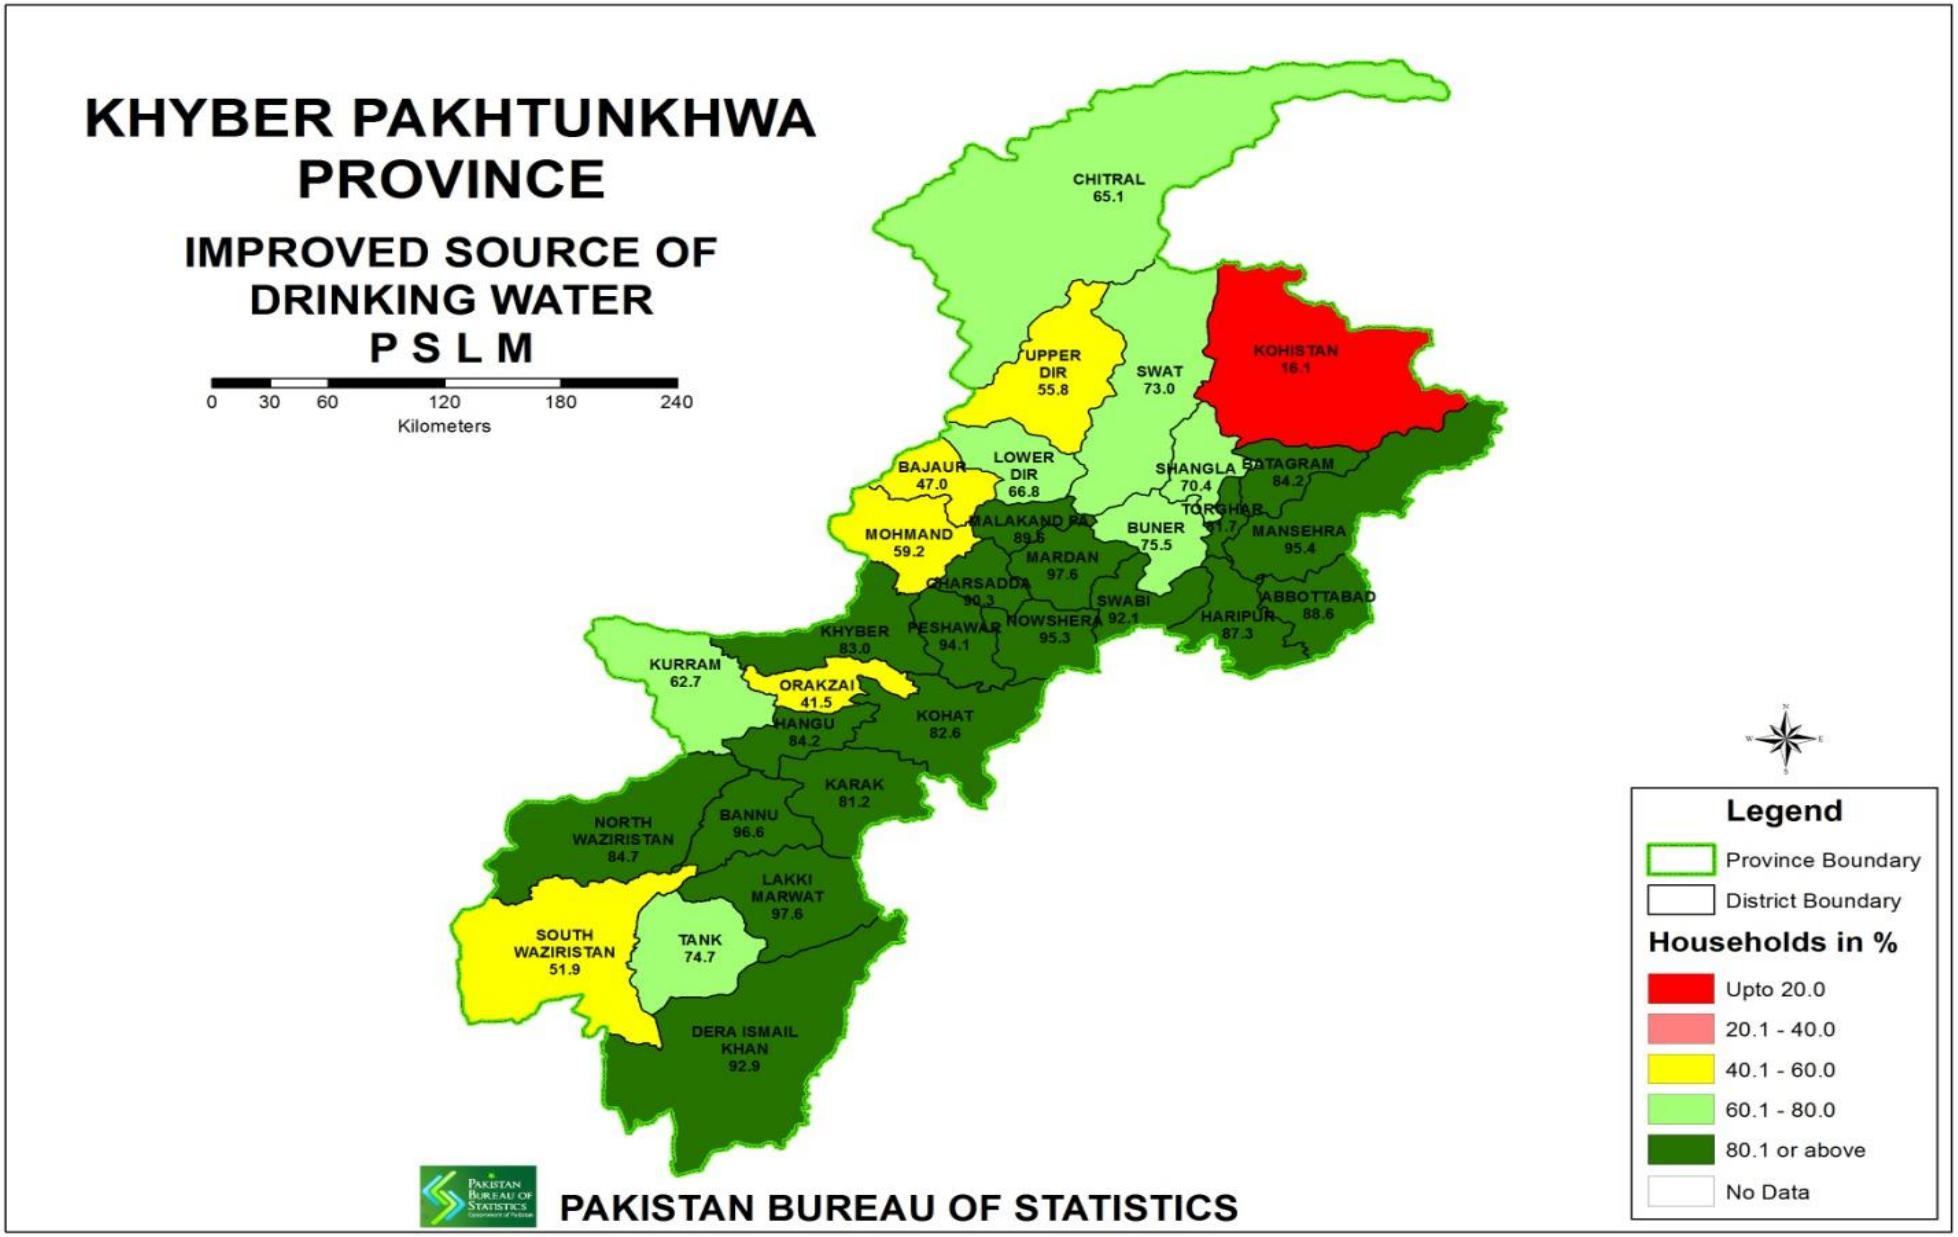

Tanker/Truck/Water Bearer and Filtration Plant[4]. In overall Pakistan, 94 percent of the households have access to improved source of drinking water. This percentage is higher in urban areas with, 99 percent as compared to 91 percent in rural areas. Provincial level comparison shows that Punjab has highest access to improved source of water, with 99 percent and Khyber Pakhtunkhwa Excluding Merged area and Including Merged Areas has lowest access with 85 percent and areas 83 percent respectively. In Islamabad 99 percent household have access to improve source of drinking water.(Figure 3)

7.2.2 Installation of Water Delivery System: It is observed that 51 percent of the household arranged their own supply of drinking water. As PSLM 2019-20 Provincial and local government in the form of public health and safety have installed 29 percent of water supplies mechanism to the household along with the working capacity of Government bodies, there is also some other non-governmental(NGO's) organizations who works for public welfare and safety. Hence 19 percent water delivery system installed by NGO's in 2019-20. (Figure 4).

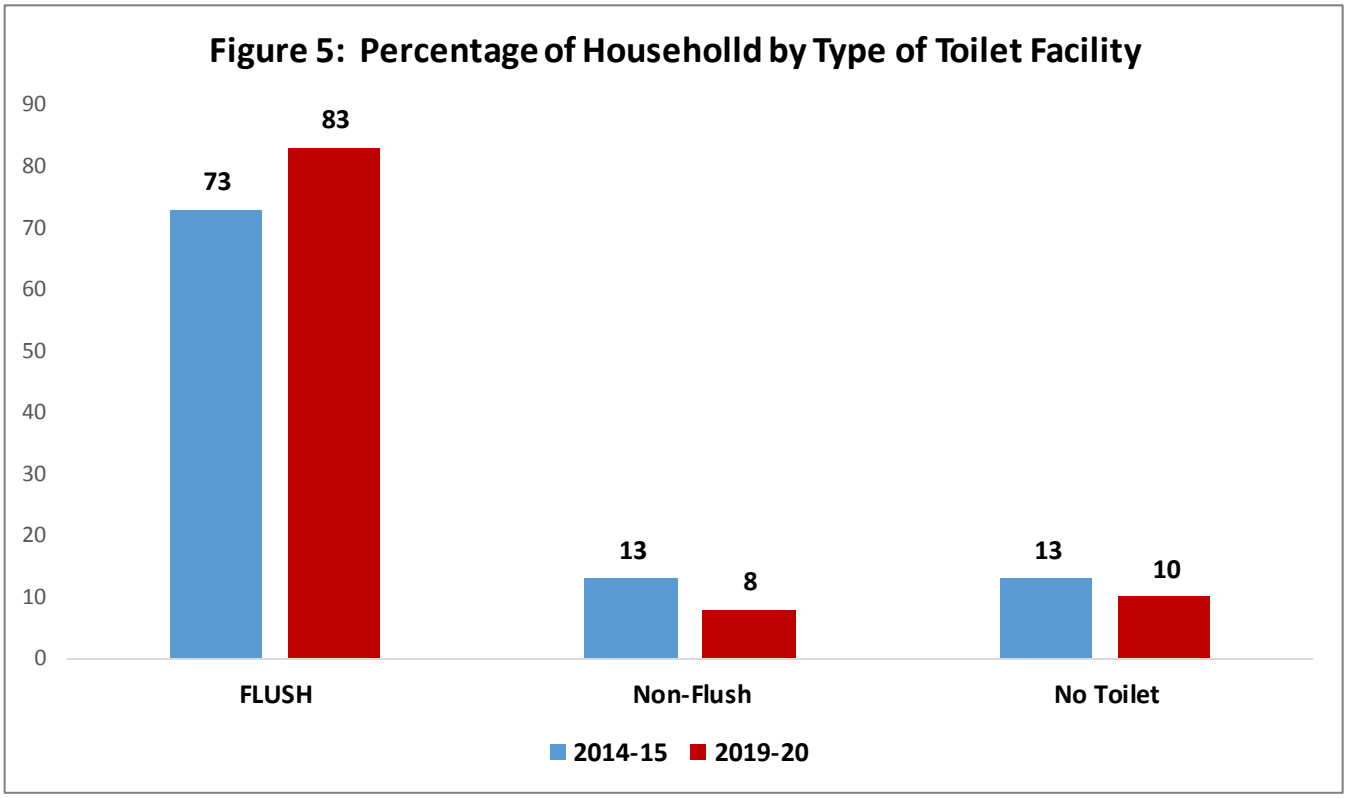

7.3 Sanitation

The term sanitation, however, extends to cover cleanliness, hygiene, proper collection of liquid and solid wastes and their environmentally sound disposal. Proper Sanitation system provides barrier to faecal diseases by collection and disposal of human excreta and also reduces the possibility of groundwater and distribution system contamination, which could affect human health through water consumption. Moreover, with the treatment and reuse of waste water, impacts on the health of receiving water bodies can be reduced. In this endeavour, the needs for waste reduction, reuse, recycle and change in the attitude towards consumption and production patterns are other imperatives for achieving goals of sustainable environment. Recognizing the importance of sanitation facilities in improving the quality of life of the people. The Government of Pakistan has formulated National Sanitation Policy in 2006 wherein broad framework and policy guidelines have been provided to enhance and support the sanitation coverage. It is, however, important that the implementation of the policy guidelines be carried out following an ecological approach to have sustainable sanitation systems.

Sanitation is also an important indicator of SDG's covered under "Goal 6" (SDG 6.2.1)[5]. Toilet is a fixture for defecation and urination, consisting of a bowl fitted with a hinged seat and connected to a waste pipe and a flushing apparatus. In the questionnaire, response was recorded regarding the type of toilet used by the Household. A toilet, which is used by the household and is situated in the yard, is considered as a toilet with in the household. Toilet has been divided into three main categories Flush, Non Flush, No Toilet. However

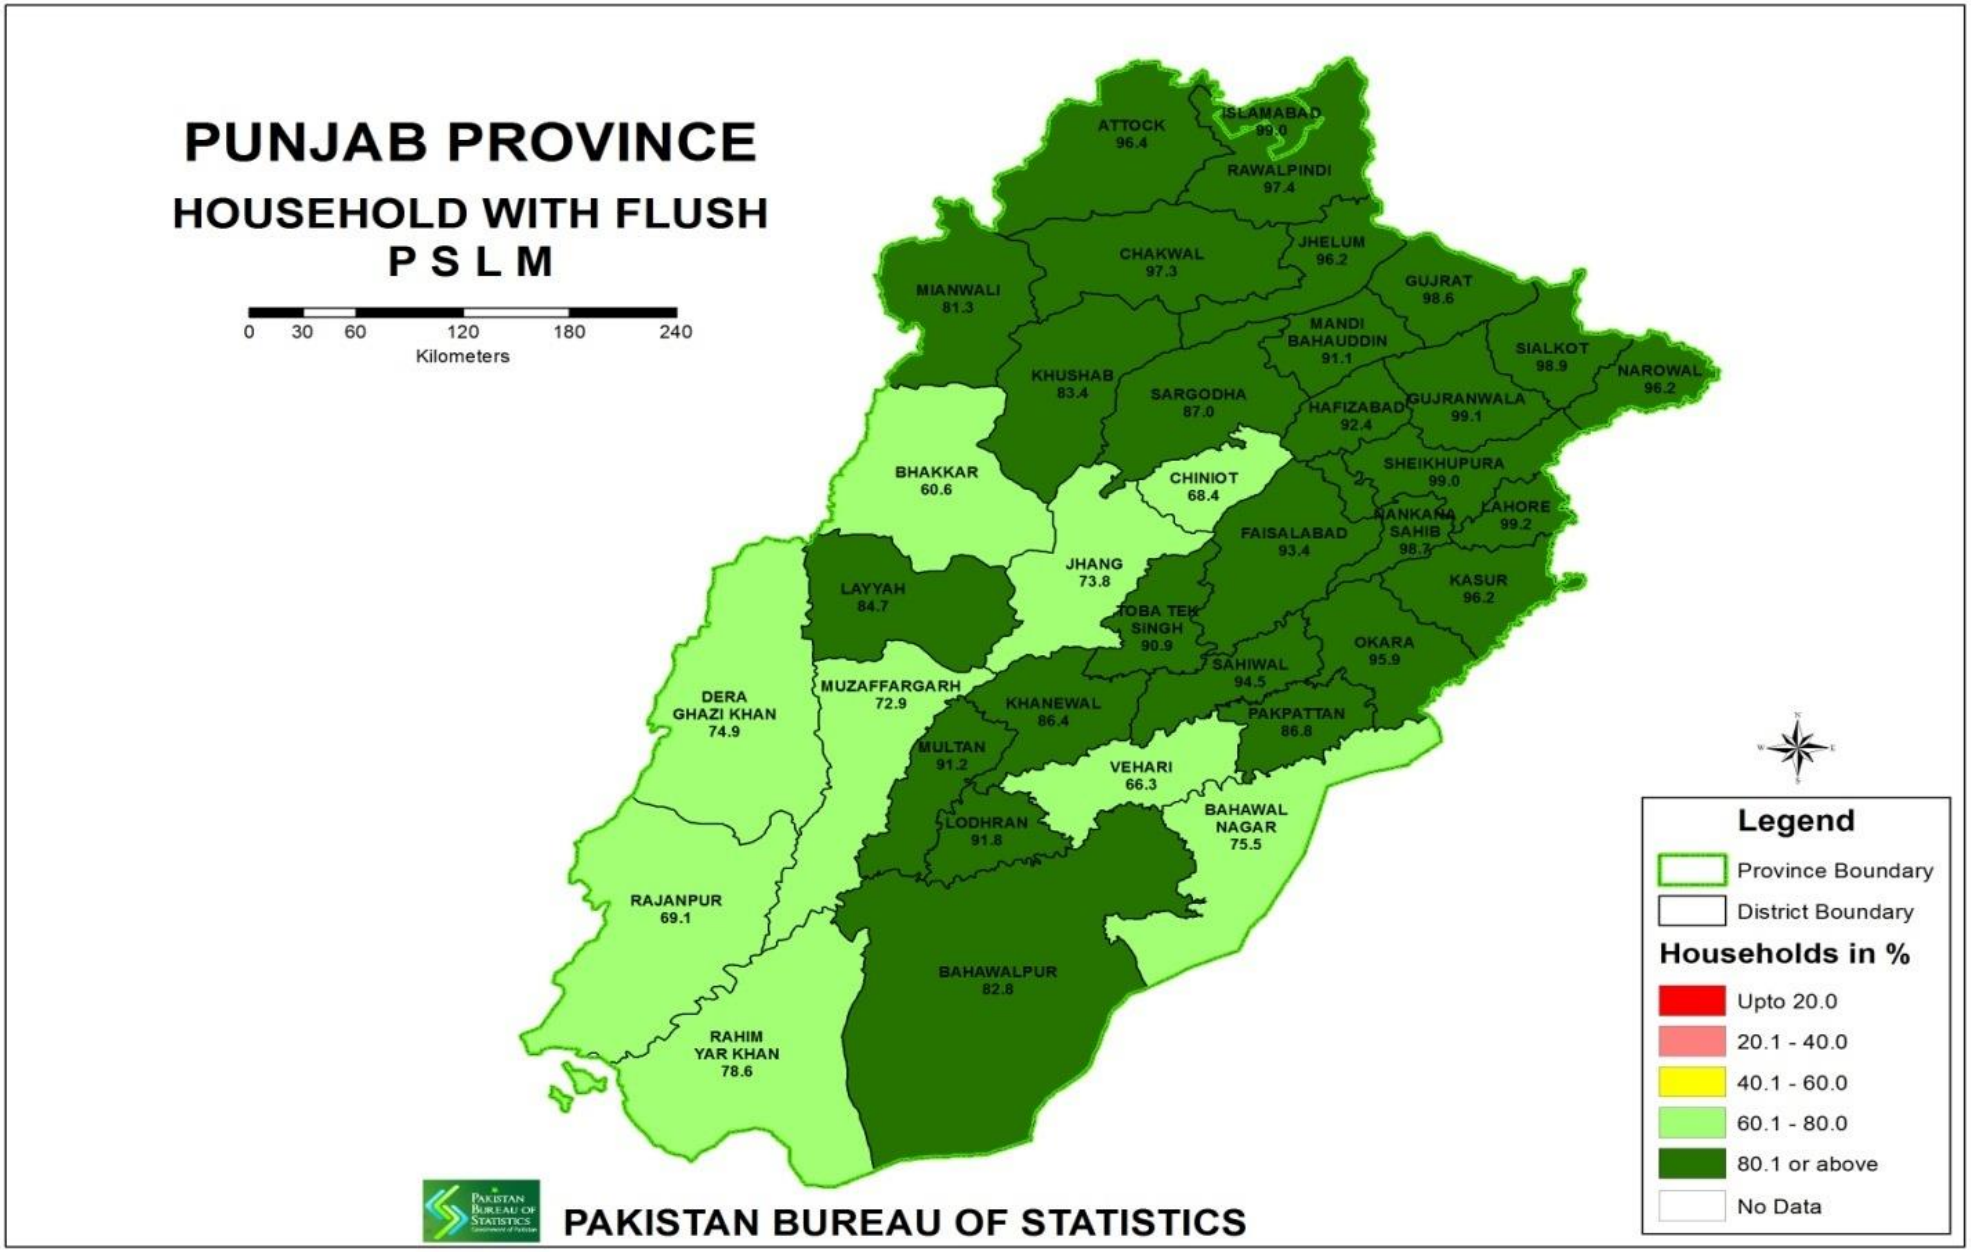

[5]unstats.un.org/sdgs/metadata/?Text=&Goal=6&Target=6.2

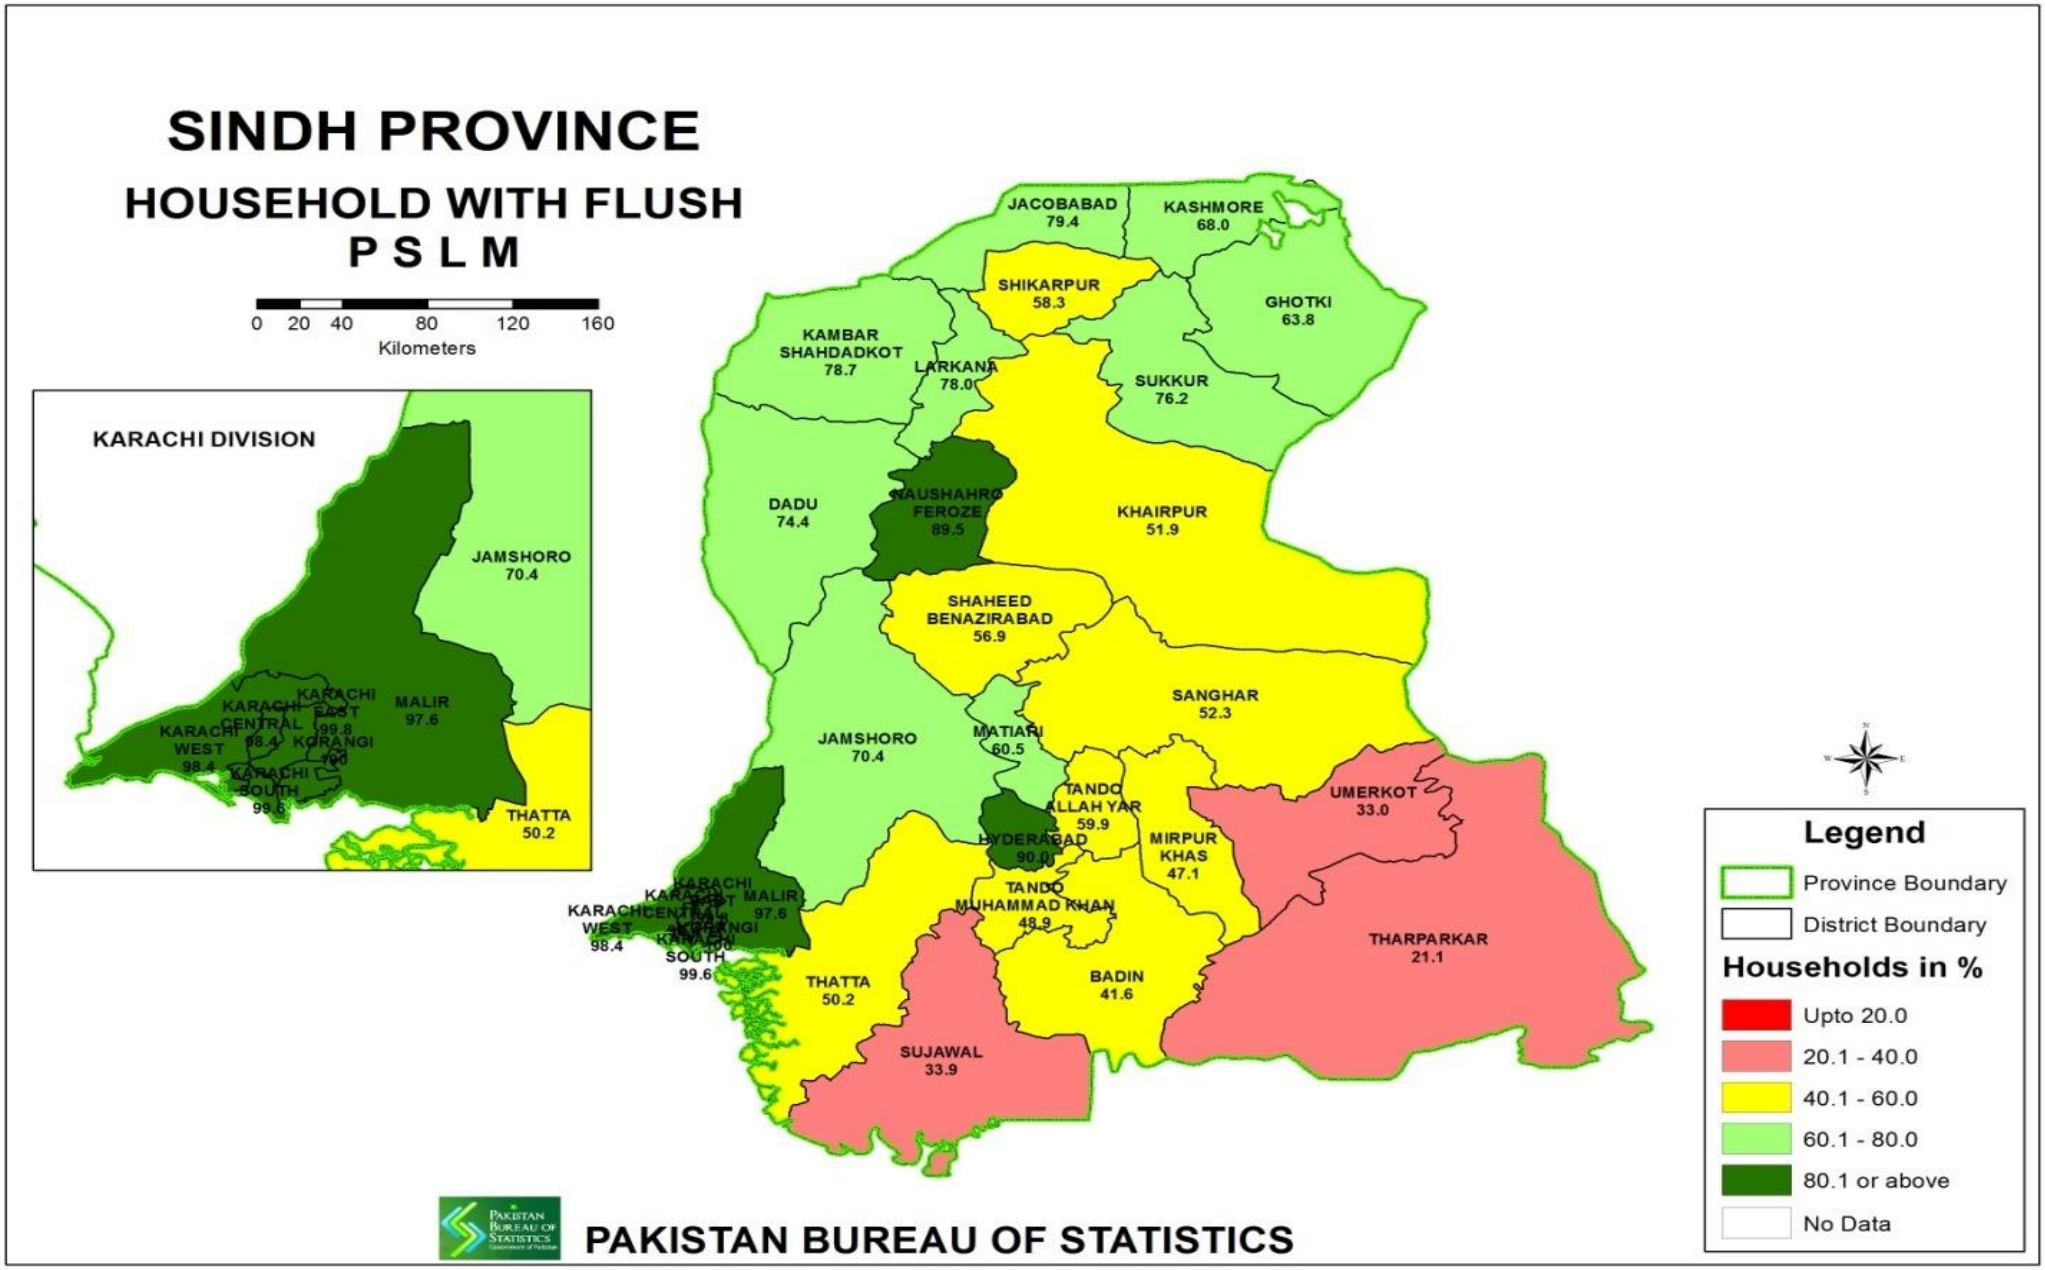

Improved Toilet (Flush) subdivided into Category such as: Flush Connected to Sewerage, Flush Connected to Septic Tank, and Flush Connected to Pit. Flush Connected Open Drain and Composting Toilet. The (Figure 5) gives picture of type of toilet facilities for overall Pakistan which shows that, 83 percent households have Flush toilet facility in 2019-20 as compared to 73 percent in 2014-15 (Figure 5). While going through (Table 7.2) it is quite evident that majority of urban households with 97 percent have Flush facility while only 74 percent of rural households have this facility. The overall access to Flush Toilets has increased in all provinces till the year 2019-20 as compared to previous years. Provincial level comparison shows that percentage of household with access to flush toilet is highest in Punjab with 89 percent in 2019-20 as compared to 79 percent in 2014-15, and Lowest Access in Balochistan with 44 percent as compared to 31 percent in 2014-15. In Islamabad 99 percent household have access to flush toilet Facility, while comparing district Lahore with 99 percent, Korangi 100 percent, Chitral 96 percent and Kohlu with 94 percent are the top ranked district with Access to Flush Toilet Facility within their respective province. On the other hand Bhakkar 61 percent, Tharparkar 2 1percent, Mohmand 32 percent and Khuzdar with1 percent are the bottom ranked district within their respective province.(Table 7.2)

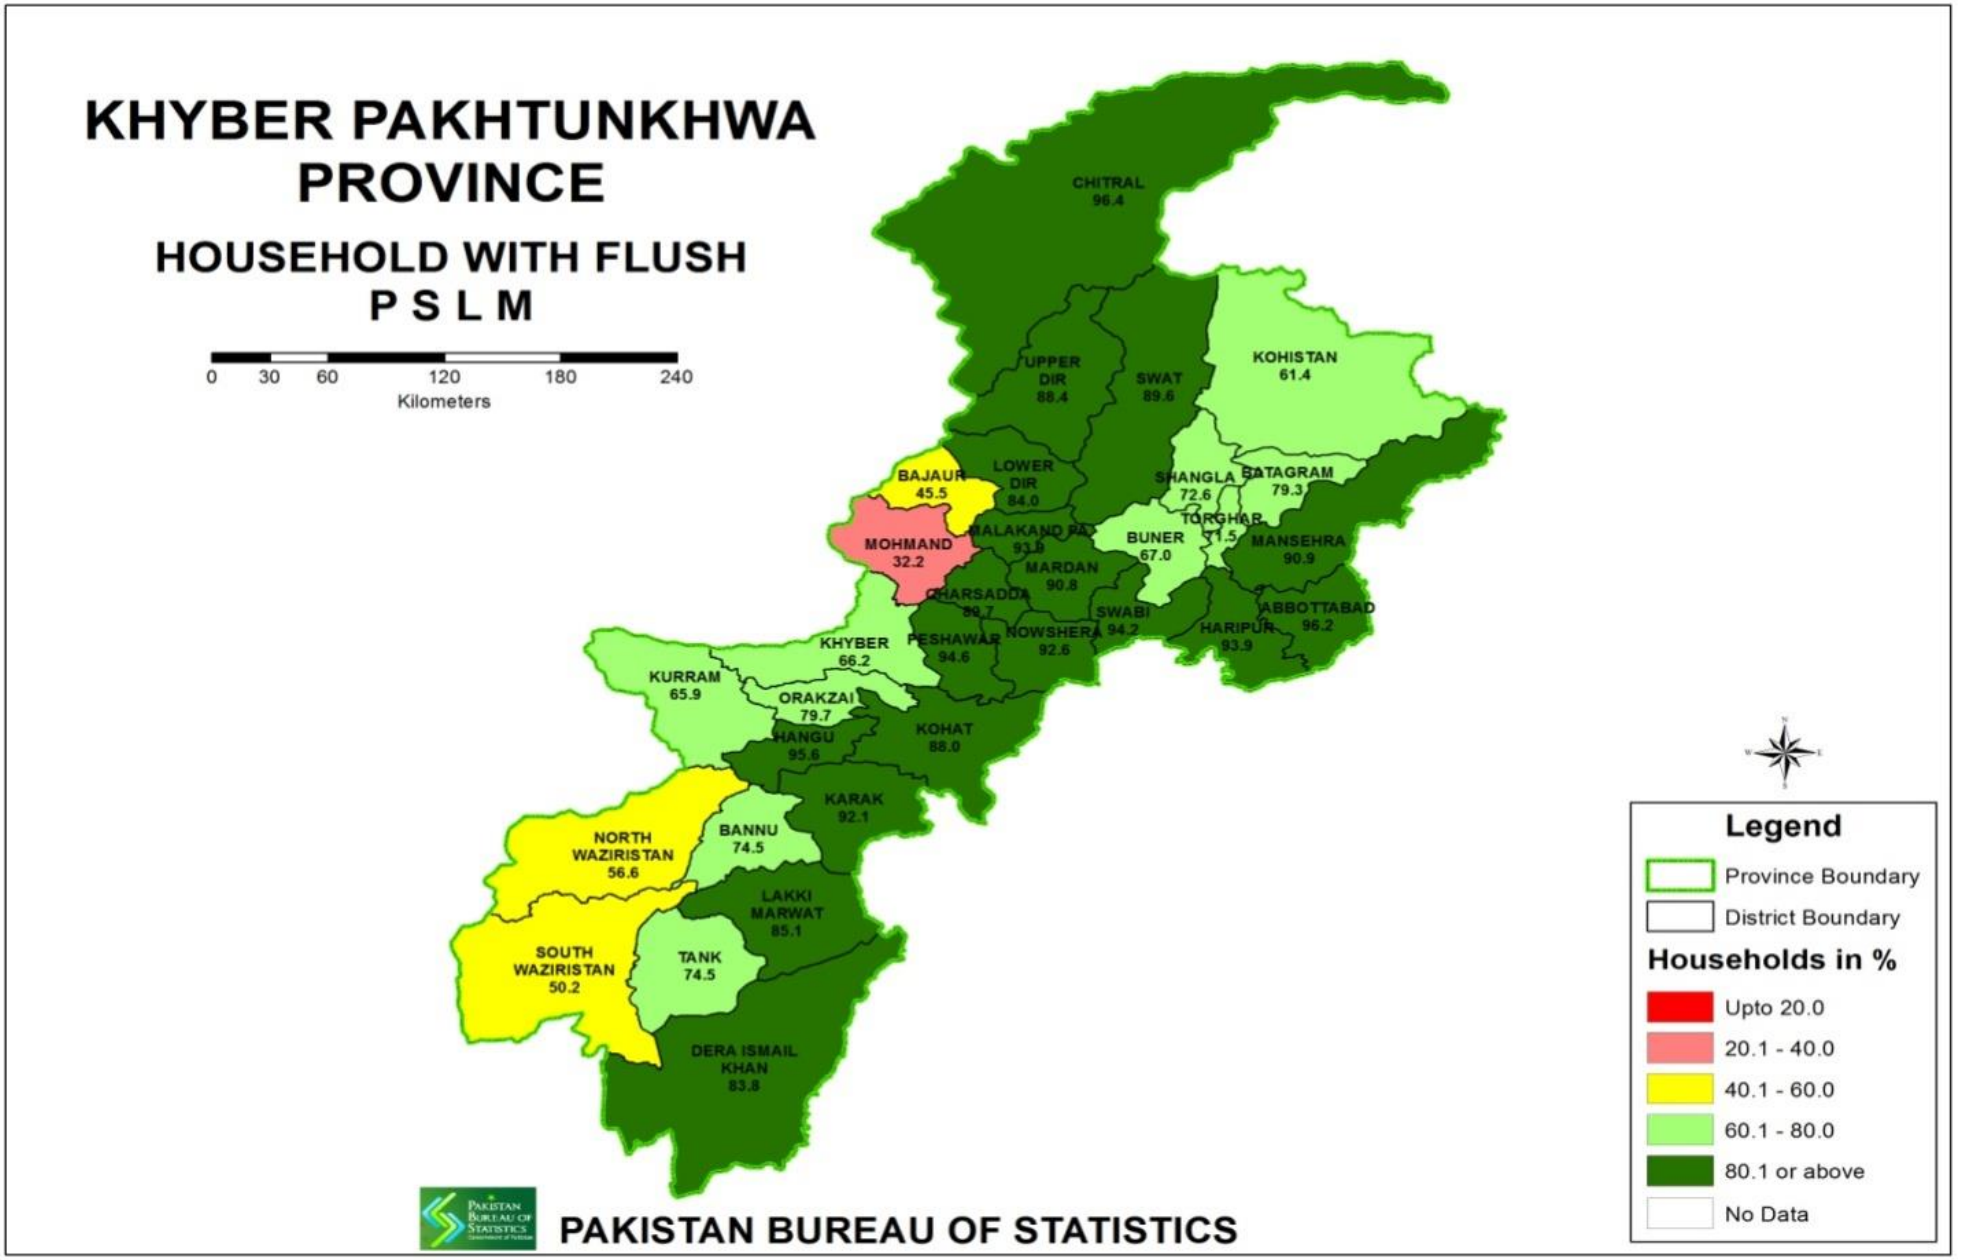

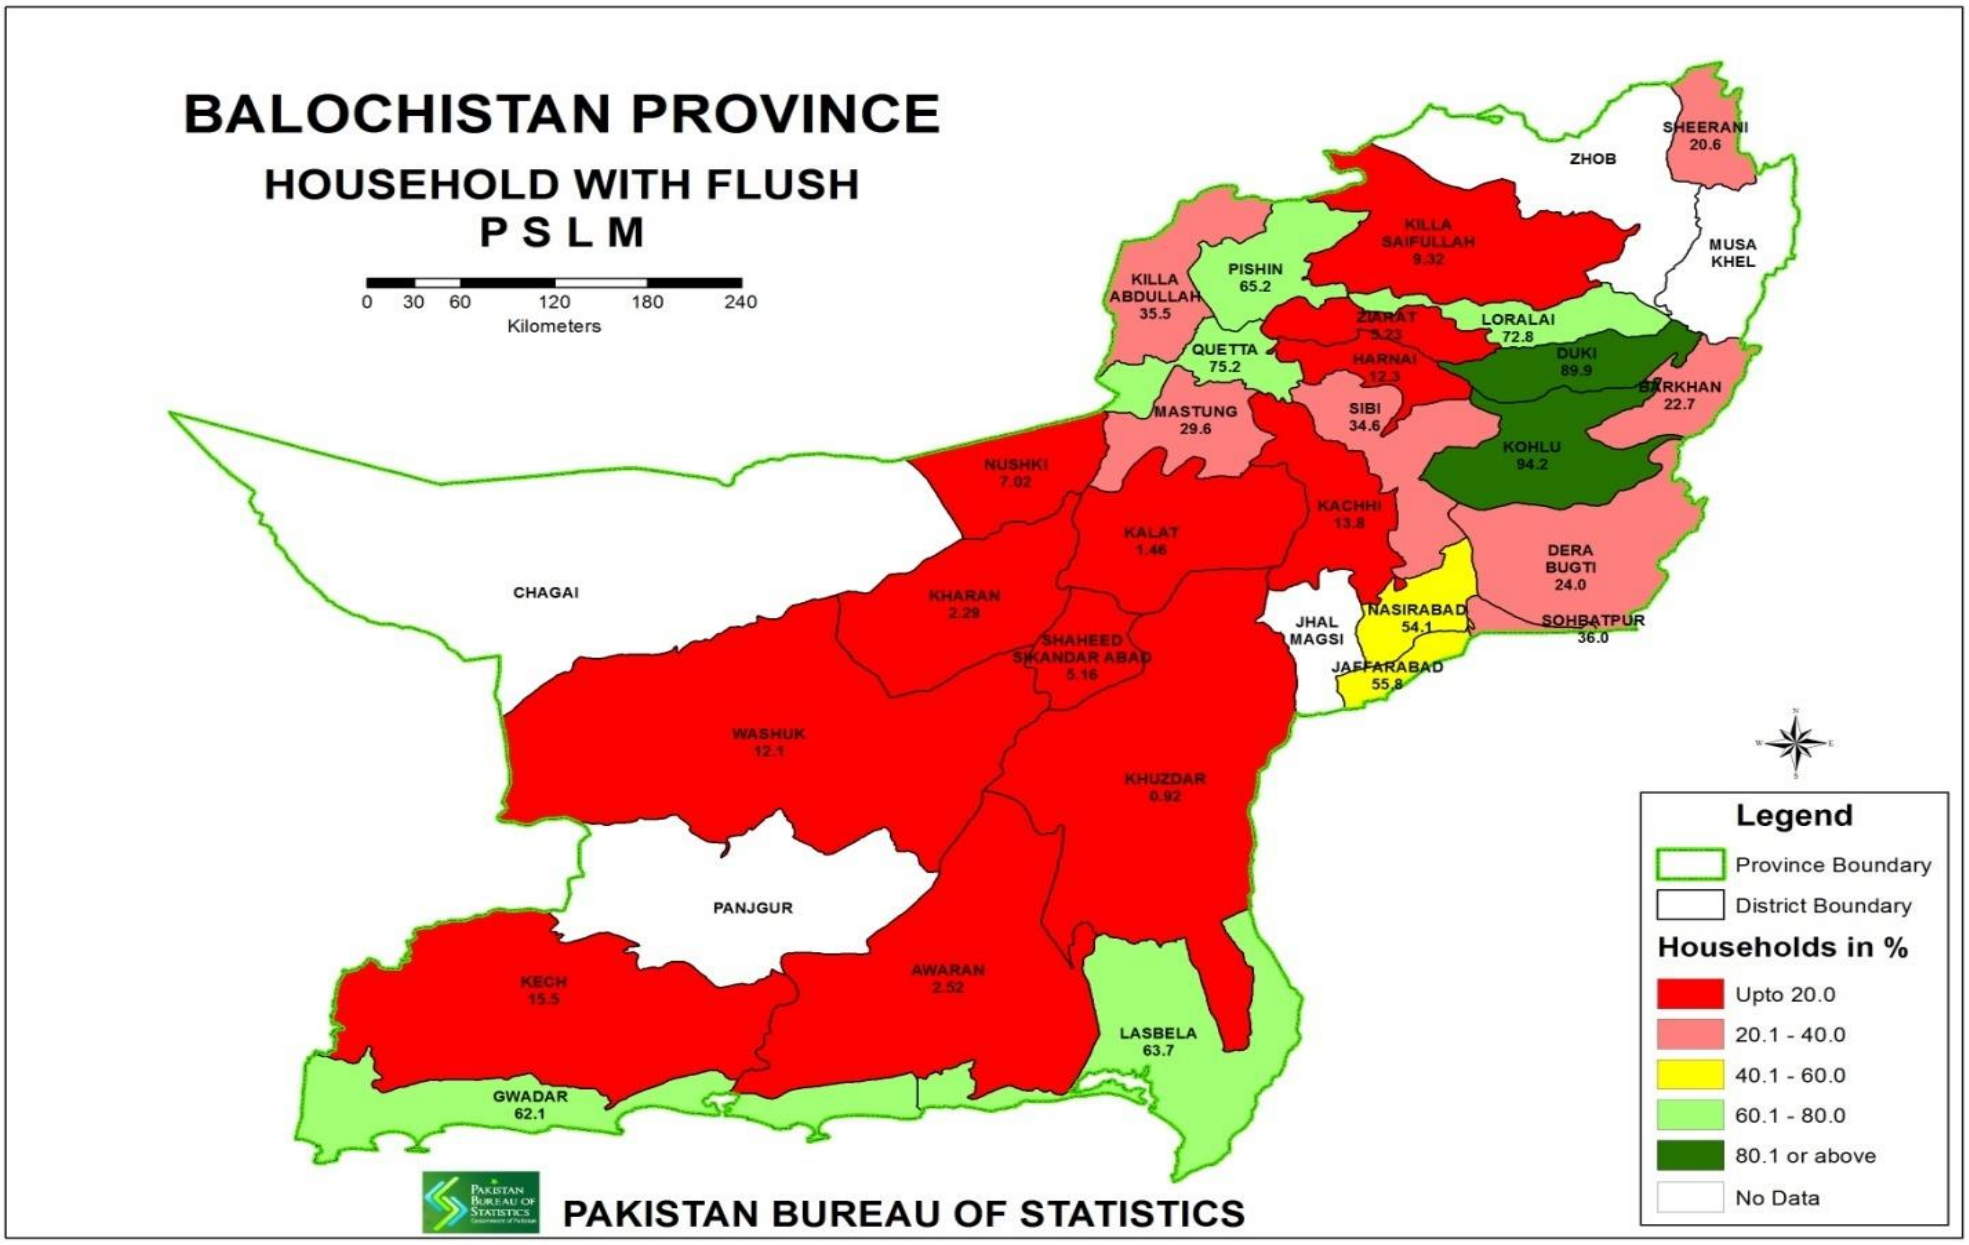

Overall, in Pakistan 8 percent of households are using non-flush toilet facilities as compared to 13 percent household in 2014-15. Non flush category includes, a soak pit is a "katcha" structure, which is closed down once it is filled up and not reused again. It is designed in a way so that the water disappears into the ground. Dry raised latrine with no flush a "khuddi" is used and the waste matter is taken away by a sweeper/jamadar and pit latrine a hole is dug in the ground, connected to a pit in which the water matter is accumulated. The hole is close down once the pit is filled up.

Only 10 percent households in 2019-20 do not have any Toilet Facility as compared to 13 percent in 2014-15. About 15 percent of rural population and 1 percent of urban population do not have access to toilet. Among provinces, the percentage of households with No Toilet Facility is highest in Balochistan with 17 percent and lowest in Khyber Pakhtunkhwa Excluding Merged areas and Including Merged area with 8 percent areas with 11 percent respectively. PAKISTAN BUREAU OF STATISTICS

7.3.1 Improved Toilet Not Shared with Other Households: PSLM 2019-20 collected information on Improved Toilet (Flush) facility that is not shared with other households. In overall Pakistan, 68 percent of the households have Improved Toilet (Flush) facility that is not shared with other households.

About 81 percent of urban households and 60 percent of the rural households have access to Improved, not shared Toilet facility. Among provinces, Punjab and Khyber Pakhtunkhwa are at top with 72 percent and Balochistan is at bottom with 41 percent. In Islamabad 87 percent household has improve Flush toilet Facility not share with other household. District wise comparison reveals Attock 91 percent, Karachi South 94 percent, Chitral 94 percent and Duki 90 percent are the top ranked district with Improve toilet facility not share with other household. Whereas district Bhakkar 41 percent, Umerkot17 percent, Mohmand 27 percent and Kharan with 1 percent are the district with less percentage to access improve toilet facility not share with other household in their respective provinces. (Figure 6)

Figure 6 : Houshold with Improved Flush Facilty not Shared with Other Household By Province

7.3.2OnsiteTreatmentFaecalSludge:

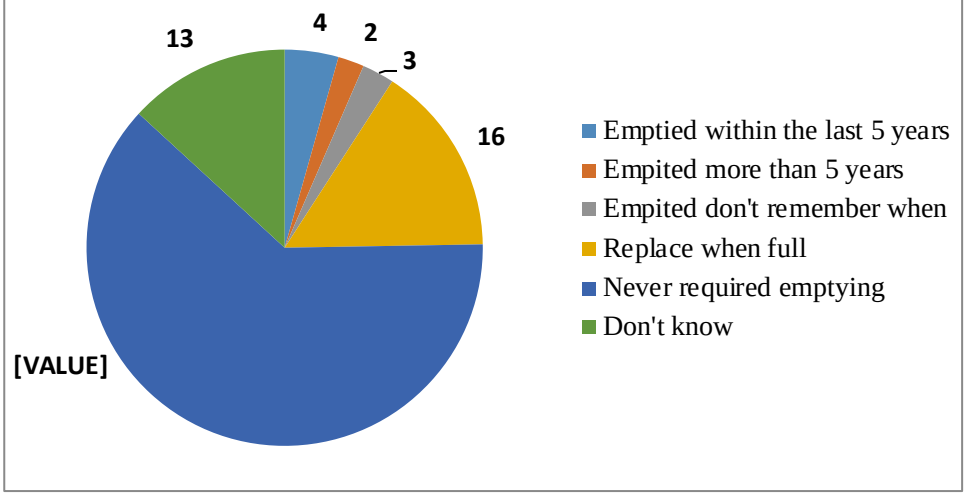

Onsite treatment refers to the collection, transport, and **treatment** of **faecal sludge** from pit latrines, septic tanks etc. PSLM 2019-20 collected information from household regarding onsite treatment.In Pakistan 27 percent houselods toilets are connected to sewerage system, regional comaprison reveal that 61 percent household of urban areas connected to swerage system as compared to 6 percent in rural areas.

Table:1 Household by type of Toilet Categories

	Urban	Rural	Total
Flush connected to sewerage	61	6	27
Flush connected to septic Tank	14	25	21
Flush connected to Pit	5	24	17
Flush connected to Open Drain	17	18	18
Compositing toilet	0	0	0
Non-Flush	2	11	8
No Toilet	1	15	10

Overall 21 percent housholds are using Flush connected to septic tank out of which 25 percent in rutal areas and 14 percent in Urban areas, 17 percent toilets connected to Pit and 18 percent Open drains repectively. In response to the question regarding cleaning of septic tank and pit latrine about 62 percent household reported they never required epmptying and 13 percent reported they even don't know about it. Whereas 4 percent reported that their septic tank or pit has been cleaned within last 5 years, 3 percent reported don't remember and 2 percent reported pit or septic tank was cleaned 5 years back.(Figure 7)

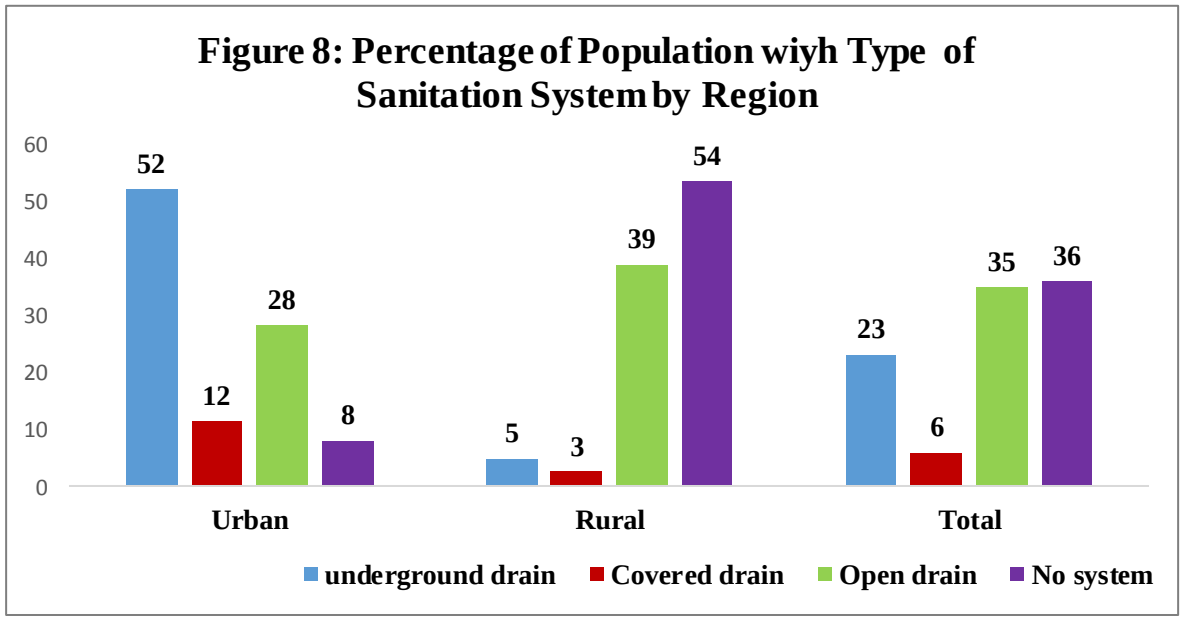

Figure 7: Percentage of household by onside fecal sludge treatment.

7.4 Type of Sanitation System Installed

Sanitation System means access to proper sanitary sewerage system through which house is connected, proper water drainage system and safe disposal of wastewater. The lack of proper sanitation facilities is directly related to the pollution of ecosystem, due to the discharge of uncontrolled and untreated wastes from

various sources with little regard for the waste assimilation capacity of the environment resulting in a host of water related diseases. To improve the health status of the people, the countries require system for the safe collection and disposal of human waste through feasible sanitation technologies and hygiene promotion. PSLM collected information in 2019-20 on type of sanitation system used by households, 23 percent household reported connection with underground sanitation system, while covered and open drain is 6 percent and 35 percent respectively, whereas 36 percent of households do not have any form of sanitation system. Urban and rural areas have contrasting picture, as 54 percent of households in rural areas do not have any sanitation system as compared to only 8 percent of households in urban areas. Provincial comparison shows that in Balochistan, highest percentage of households who do not have any sanitation system i.e.63percent and Punjab with 28 percent at lowest ranked provinces. (Figure 8)

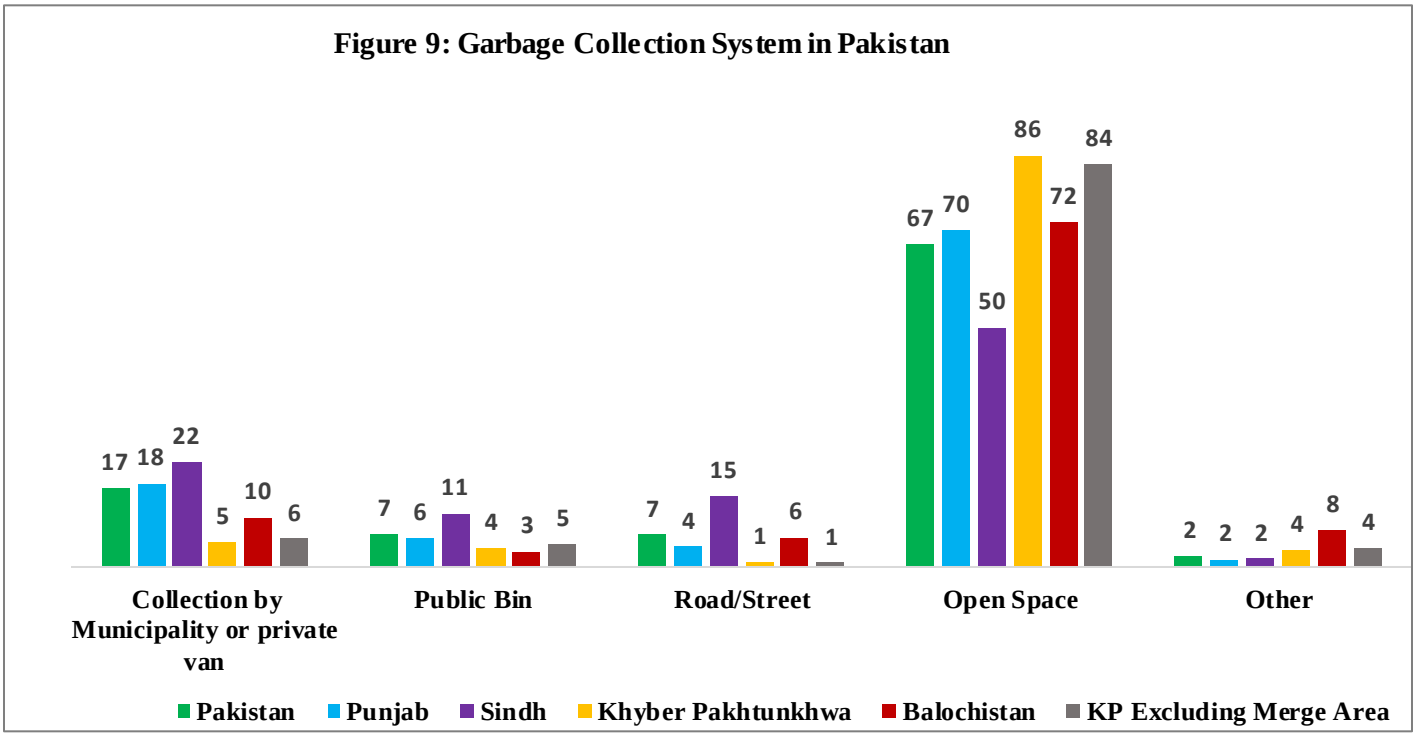

7.5 Garbage Collection System in Pakistan

The term Garbage collection refers to the transfer of solid waste from the point of use and disposal to the point of treatment or landfill. Solid waste collection by the Government Municipality sector is recorded 17 percent in PSLM 2019-20, which indicates the poor solid waste management system for collection of solid waste upto its proper disposal. Urban and rural areas shows wide gap with 39 percent and 2 percent respectively. Among Province Sindh with 22 percent is at top while Khyber Pakhtunkhwa with 5 percent is at bottom with Access to the Garbage collection by Government Municipality system. In Islamabad 63 percent household has Garbage collection by Municipality system. While Comparing district Lahore 52 percent, Karachi Central 61 percent, Peshawar 28 percent and Quetta 42 percent are the top Ranked district with

Access to Garbage collection by Municipality system .Whereas district Rajanpur 0 percent, Umer kot 0 percent, Orkazai 0 percent and Ziarat with 0 percent are the bottom ranked district with Access to garbage collection by Municipality within their respective provinces.

Overall in Pakistan 67 percent of households reported that they had no Garbage collection system in 2019-20. Here again there is wider gap in households who have no Garbage collection system between urban and rural areas with 44 percent and 97 percent respectively. In rural areas, except Balochistan the pattern is more or less same for all the three provinces. (Table 7.3, Figure 9)

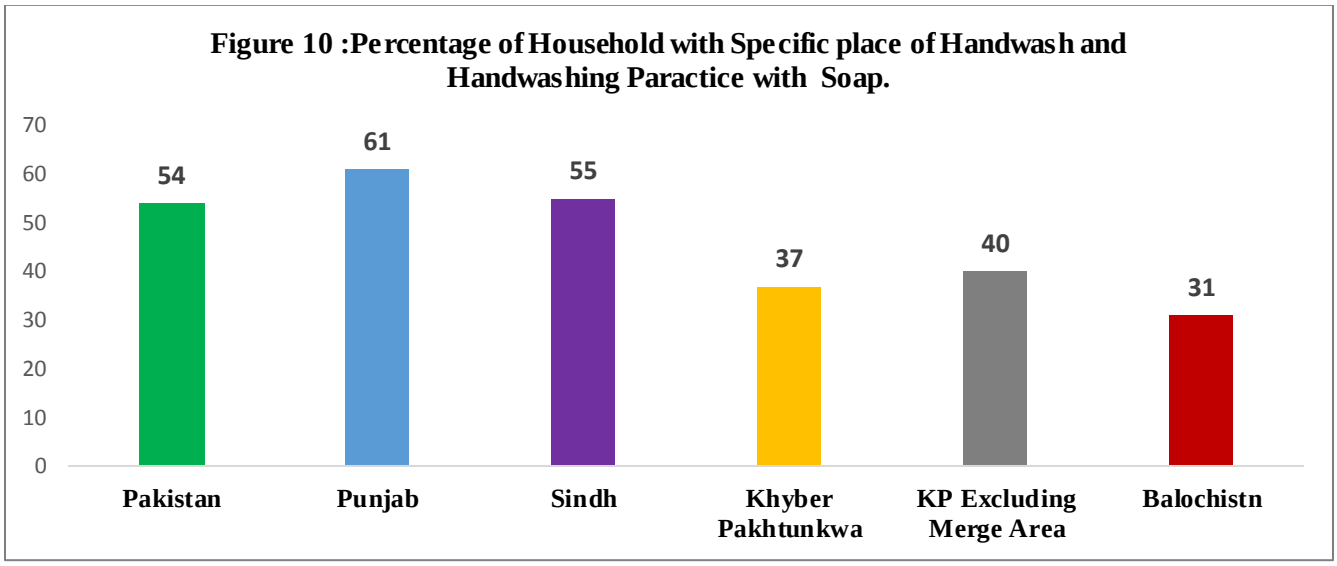

Figure 9: Garbage Collection System in Pakistan

7.6 Hygiene

Hand washing with soap as an effective, affordable way to prevent diseases and also SDGs indicator (6.2.1b: Population with a basic hand washing facility: a device to contain, transport or regulate the flow of water to facilitate hand washing with soap and water in the household.)[6]. PSLM 2019-20 collects information from households about the facility of specific place of Hand Washing with availability of Hand Washing Agent like Soap, Detergent etc. In overall Pakistan, 54 percent of the households have access to specific place of hand washing with washing agent. A significant gap has been observed in urban and rural areas with 77 percent and 39 percent respectively. Provincial comparison shows that Punjab is at top with 61 percent and Balochistan is at the lowest with 31 percent. (Figure 10)

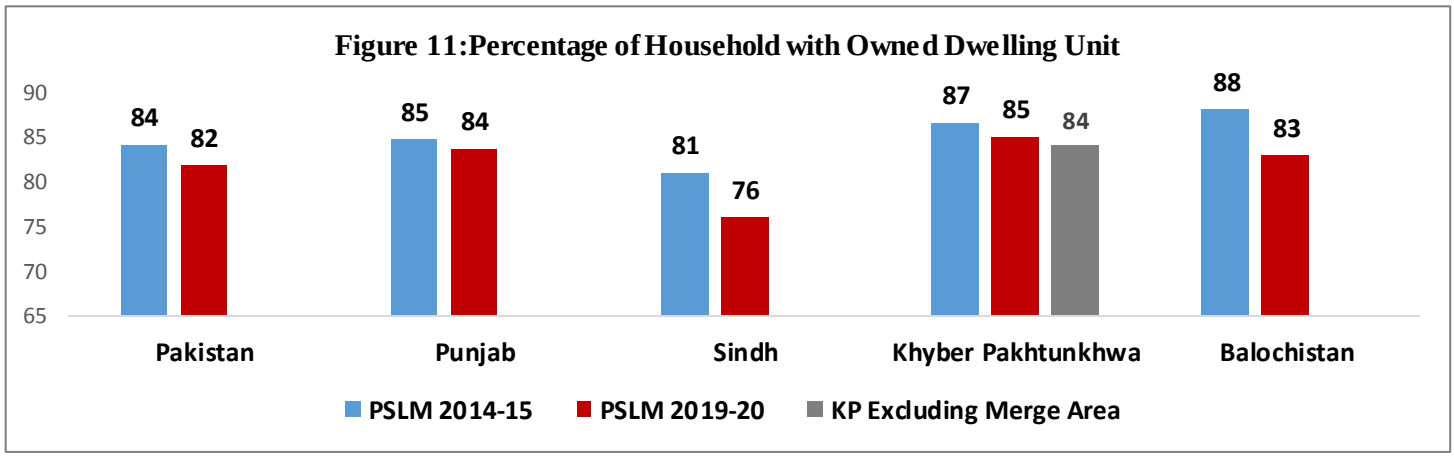

[6]unstats.un.org/sdgs/metadata/?Text=&Goal=6&Target=6.2

7.7 Housing Characteristics

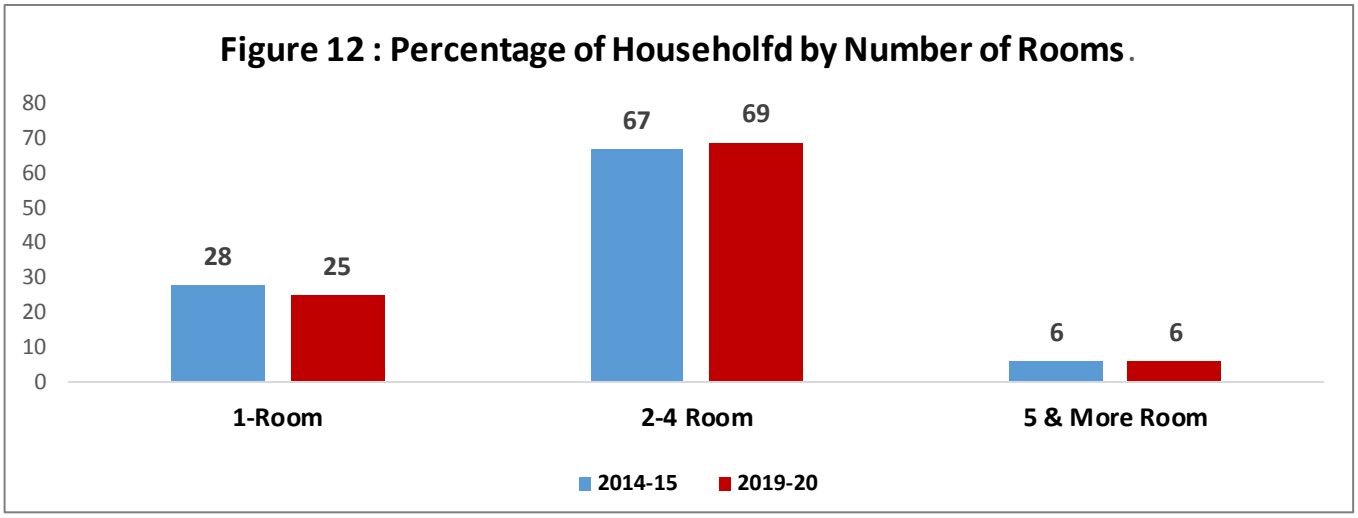

Housing is one of the most important life components giving shelter, safety and comfort, as well as providing a place to live. The need for housing is not only one of the basic human needs, but also the indicator of living standard of the population. A house is a building that functions as a home for humans, including simple dwellings ranging from rudimentary huts of nomadic tribes to complex structures composed of many systems. PSLM 2019-20 collects information on some household indicators including occupancy status, type of roof, walls and floor. Further, it also collects information on fuel used for cooking, heating and lighting

7.7.1 Household Tenure and Number of Rooms Occupied by Household: Housing tenure indicates dwelling unit that is Owner Occupied, On Rent, Rent Free or on Subsidized Rent. In overall Pakistan, the numbers of households that Own Dwelling is 82 percent during period 2019-20 as compared to 84 percent in 2014-15. The percentage is higher in rural areas i.e. 89 percent as compared to 70 percent in urban areas. Provincial comparison shows that percentage of households that Own their Dwelling unit is highest in Khyber Pakhtunkhwa with 85 percent in 2019-20 as compared to 87 percent in 2014-15 and lowest in Sindh with is 76 percent as compared to 81 percent in 2014-15. In Islamabad 50 percent of household have their own dwelling unit in 2019-20 which remain stable from 2014-15. Comparison of districts shows that Narowal with 95 percent , Matiari with 95 percent ,South Waziristan with 100 percent and Khuzdar with 100 percent are the district where people predominantly live in their own housing unit within their respective provinces. On the other hand Lahore with 66 percent, Karachi South with 53 percent, Batagram with 62 percent and Sohbatpur with 42 percent are at bottom with the household who own dwelling unit within their respective provinces. (Table 7.4)

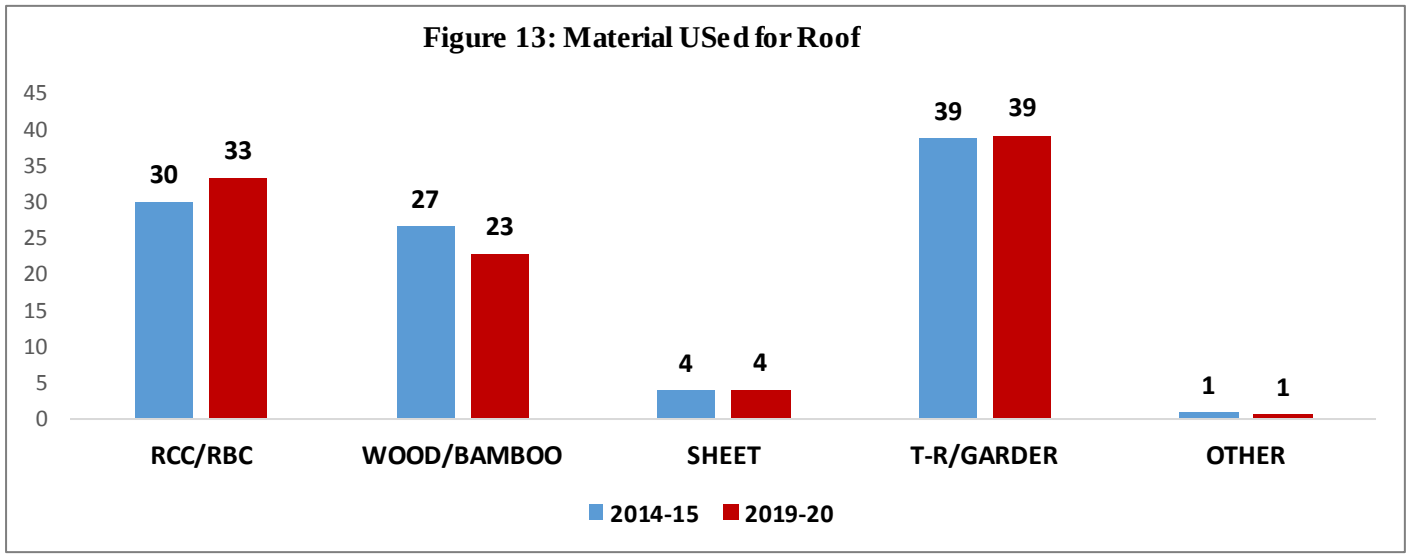

In overall Pakistan, 10 percent of households are living on Rented and Subsidized Rented houses in 2019-20 as compared to 8 percent in 2014-15. Provincial level comparison shows that Sindh at top with15 percent in 2019-20 as compare to 11 percent in 2014-15 and Khyber Pakhtunkhwa is at bottom with 7 percent remain stable as compared to 2014-15.In Islamabad 34 percent household are living in rented and subsidized rented house in 2019-20. While comparing at district level it is observed that Lahore with 24 percent, Karachi west 35 percent, Peshawar 23 percent and Quetta with 28 percent are the top ranked district living in rented houses. (Table 7.4)

Room is defined as any space enclosed within four walls to which entry is possible only by a door that connects it either to a passageway, to another room, or to the outdoors, that is large enough for several persons to move about, and whose size, fixtures, furnishings, and sometimes placement within the building support the activity to be conducted in it. According to PSLM 2019-20, majority of the households in Pakistan live in housing units with 2-4 Rooms with 69 percent, as compared to 67 percent in 2014-15. However houses with five or more Rooms remain stagnant at 6 percent during 2019-20. Provincial comparison showed that Khyber Pakhtunkhwa at top with 74 percent of housing units with2-4 rooms, while Sindh at bottom with 63 percent in 2019-20. It is observed that, 25 percent of households in Pakistan are living in housing unit with 1 room. Sindh at top with 36 percent and lowest Khyber Pakhtunkhwa with 16 percent households living in housing unit with 1 room, followed by Punjab and Balochistan with 23 percent. In Islamabad 11 percent household living in 1 room while district comparison reveals that Muzaffargarh 40 percent, Shaheed Benazirabad 72 percent, Kohat 26 percent and Sohbatpur with 67 percent have highest percentage of household with 1 room .Whereas district Chakwal with 7 percent, Karachi East with 9 percent, Tank with 5 percent and Sheerani with 0 percent are the district with lowest percentage of household with 1 room in their respective provinces. (Figure 12, Table 7.5)

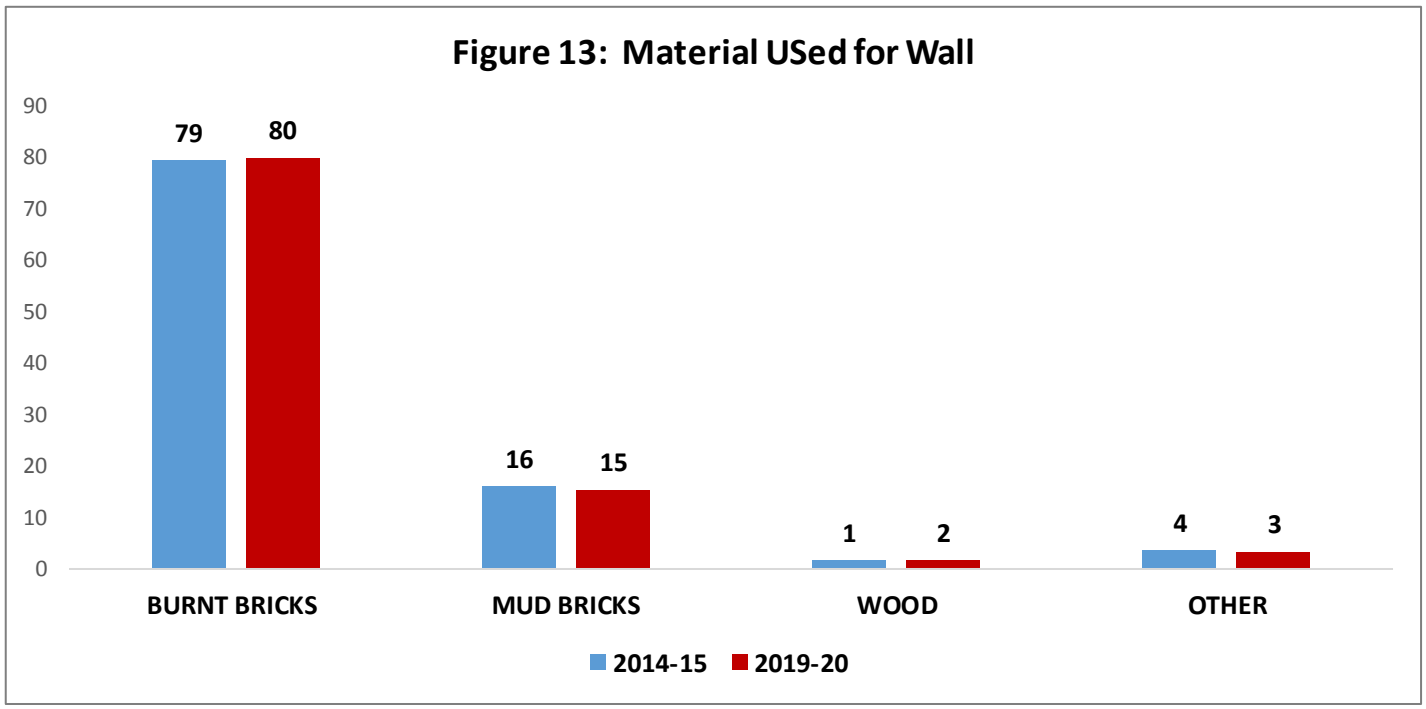

7.7.2 Household Material used for Roof and Walls: A **Roof** is the top covering of a building including all material and constructions necessary to support it on the walls of the building. It provides protection against rain, snow, sunlight, wind and extreme of temperature. According to PSLM 2019-20 the material used for roof categorized as RCC/RBC, Wood, Bamboo, Iron, Cement, T-R and Garter etc.

In Pakistan, Garter/T-iron with 39 percent is predominantly used material for roof construction. This percentage is higher in rural area i.e. 46 percent as compared to 28 percent in urban area. The use of Garter/T-iron is highest in Punjab with 50 percent and lowest in Khyber Pakhtunkhwa (Excluding & Including Merged Areas) with 21 percent. The second most material use for roof is RCC/RBC with 33 percent this percentage is higher in urban Areas with 60 percent in 2019-20 as compared to 57 percent in 2014-15. Punjab at top with 36 percent of households, while Balochistan has the lowest percentage with 9 percent for using RCC/RBC as a roof material. (Table 13)

In Islamabad 91 percent household use RCC/RBC for construction of roof. District wise comparison reveals that Lahore with 87 percent, Karachi south 84 percent, Haripur 73 percent and Quetta with 31 percent is the top ranked district using RCC/RBC for construction of roof within their respective provinces. Balochistan with 61 percent households is at top for using Wood/Bamboo for roof in 2019-20 as compared to 68 percent in 2014-15.(Table 7.6)

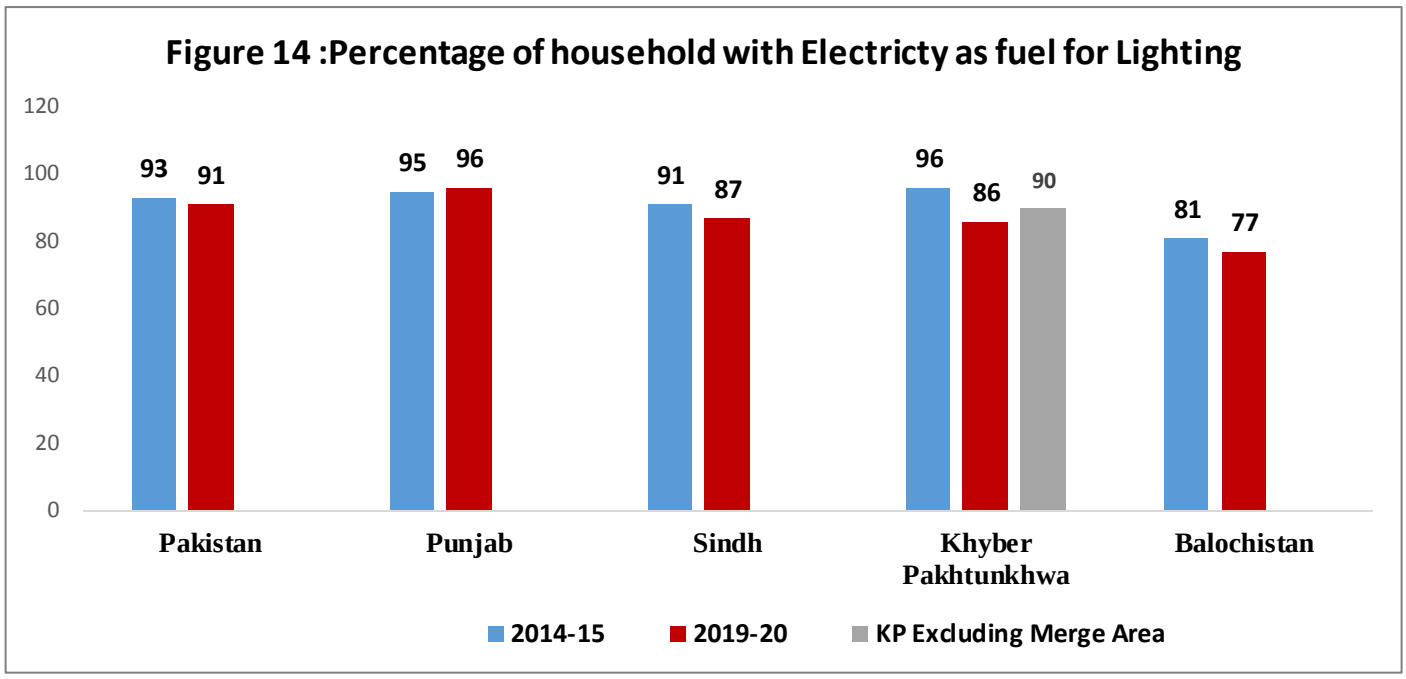

A **Wall** is a structure that defines an area, carries a load, and provides shelter and support to roof. In overall Pakistan, Burnt Bricks/Blocks is the material used mainly for construction of walls with 80 percent as compared to 79 percent in 2014-15. Percentage is higher in urban areas, 96 percent as compared to 70 percent in rural areas. Provincial comparison shows that the use of Burnt Bricks/Blocks is highest in Punjab with 92 percent in 2019-20 as compared to 90 percent in 2014-15 and lowest in Balochistan with 37 percent in 2019-20 as compared to 30 percent in 2014-15.(Table 7.7)

Mud Brick/Mud is the second most material with 15 percent, percentage is higher in rural areas with 23 percent. Highest use of Mud Bricks is observed in Balochistan with 58 percent followed by Sindh with 21 percent. In Islamabad 99 percent household use Burnt Bricks /Blocks as material for construction of walls. District wise comparison reveals Lahore 99 percent, Korangi 100 percent, Nowshera 94 percent and Quetta with 74percent are the top ranked district use Burnt/Bricks Block material used for construction of walls. Whereas district Rajanpur 48 percent, Tharpakar 8 percent, Orkazai 6 percent and Duki with 0 percent are the district with lowest percentage using Burnt Bricks /Blocks for wall material.

7.7.3 Fuel Used for Lighting and Cooking: PSLM survey collects information from households about the major source used for **Lighting** and the categories which are included are Electricity, Solar Energy, Gas / Kerosene Oil, Candles, Firewood and others. It is pertinent to mention here that Solar Energy is added for first time as a separate category in PSLM 2019-20, before that this information was reported in the Electricity.

In Pakistan, 91 percent of household were using Electricity as source for lightning in 2019-20 as compared to 93 percent in 2014-15,while 5 percent households reported Solar Energy as source of Lighting. Urban household predominantly used electricity with 98 percent as main source of lighting as compared to rural household with 86 percent. The use of Electricity is high in Punjab with 96 percent in 2019-20 and lowest in Balochistan with 77percent. Solar panel are used predominantly in rural areas of Khyber Pakhtunkhwa and Balochistan.

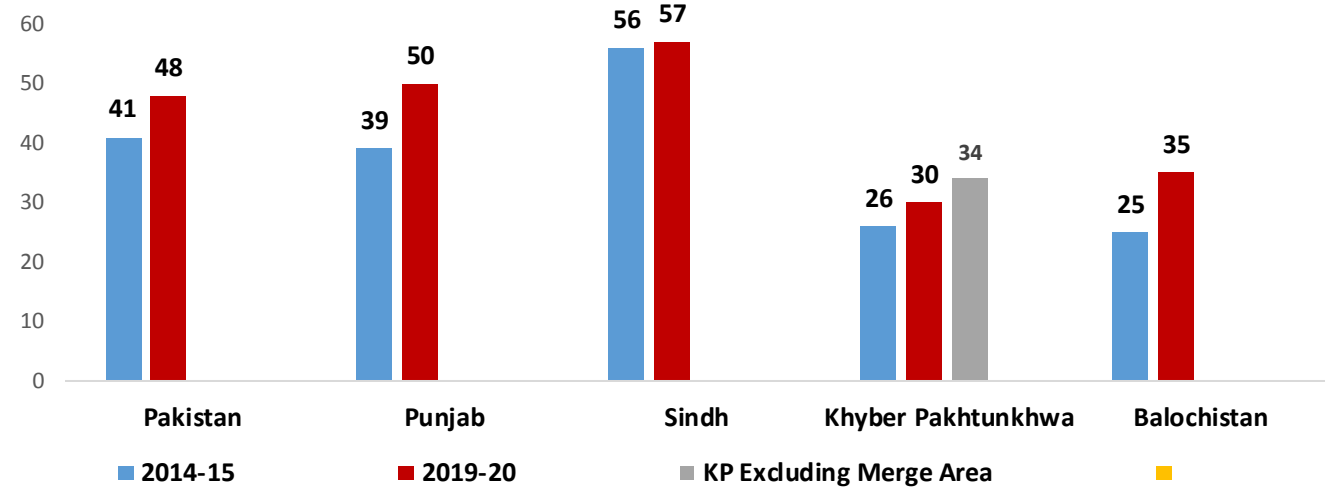

In Islamabad 99percent household are using electricity as source of Lightening. While comparing district Nankana sahib with 100 percent, Korangi 100 percent, Malakand 100 percent and Nushki with 99 percent are the top ranked district within their respective province. Whereas district Rajanpur with 60 percent, Tharparkar 35 percent, Khyber 15 percent and Sheerani with 0 percent have the lowest usage within their respective province.(Table 7.8)

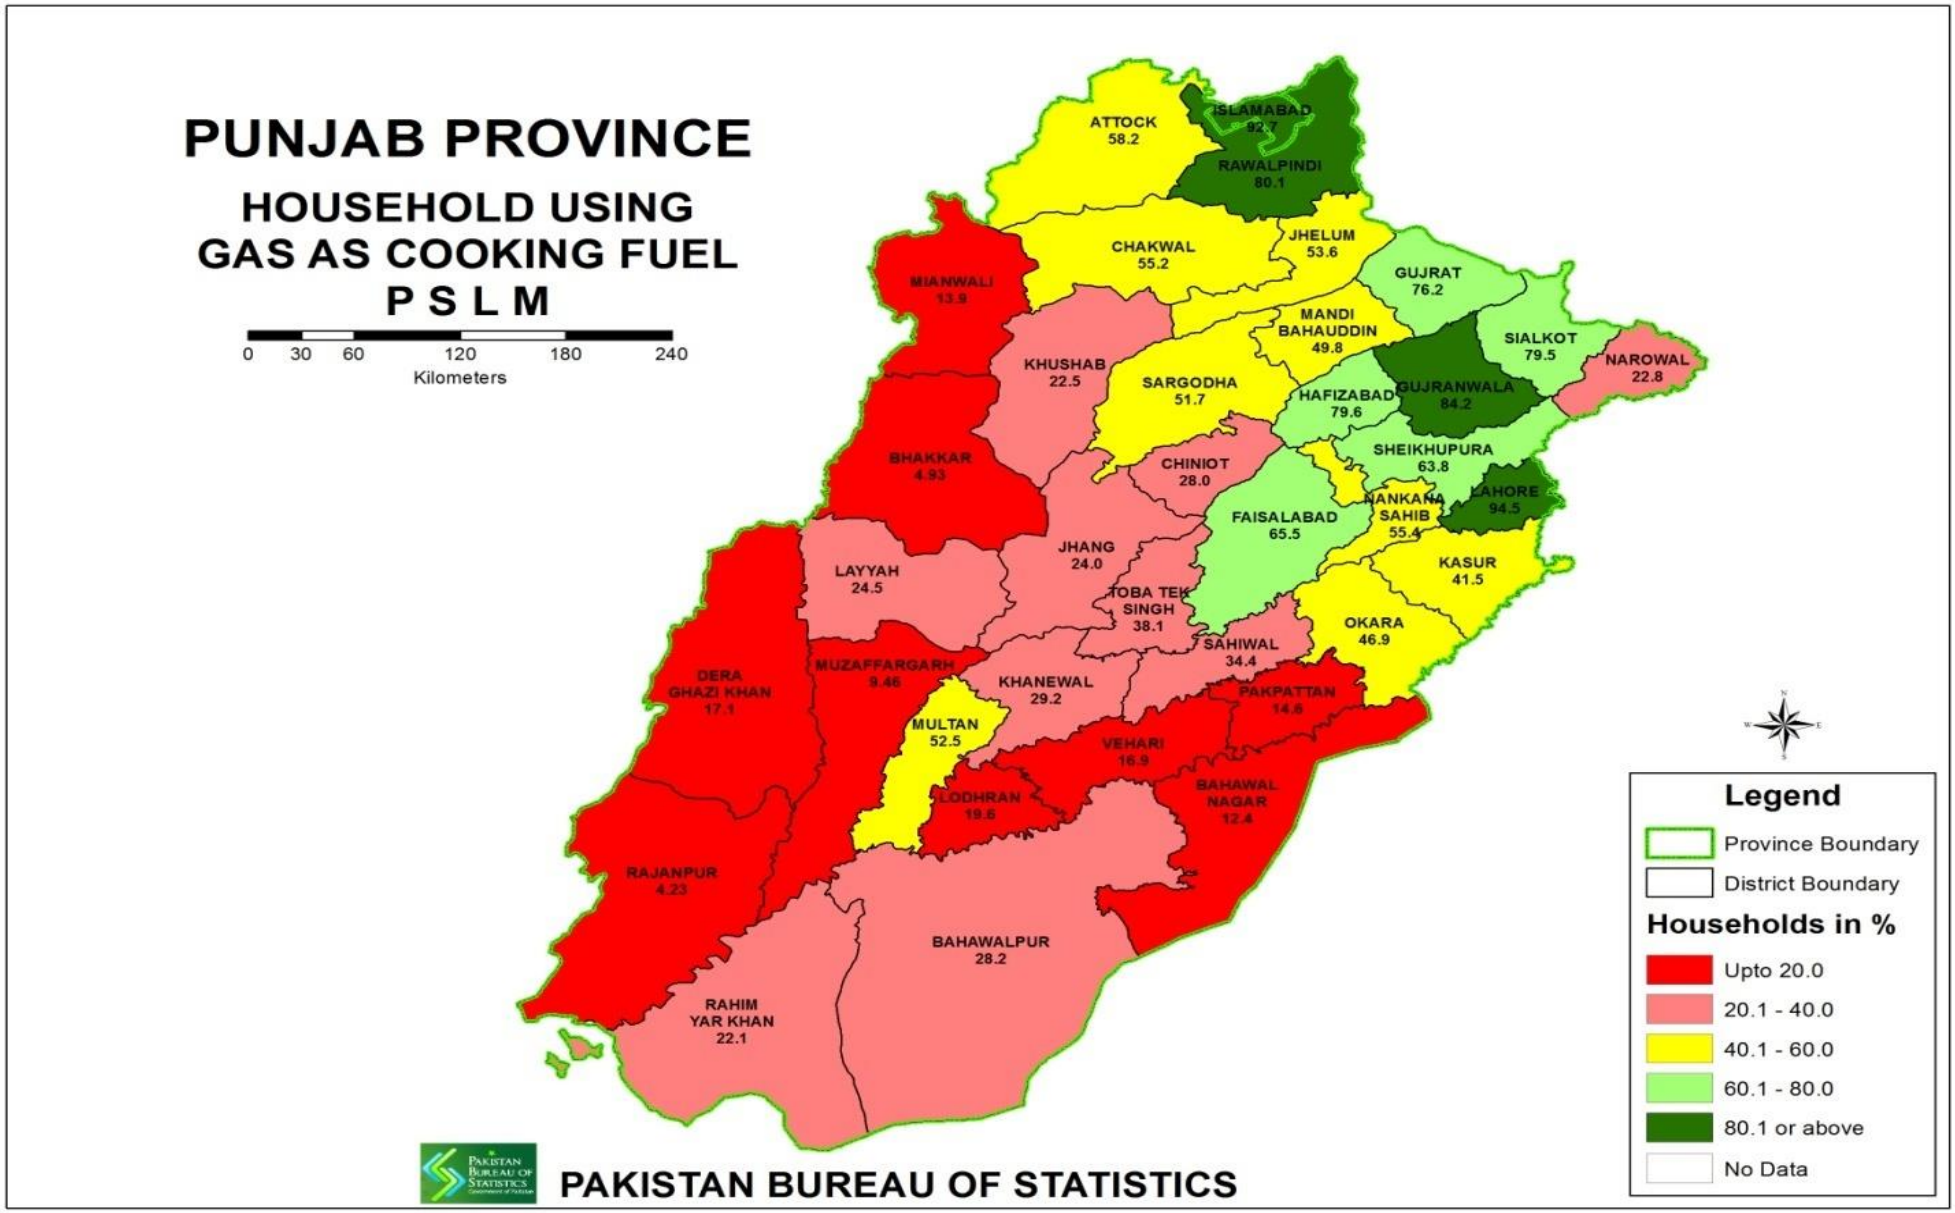

Information regarding main fuel used for **Cooking** was collected in PSLM 2019-20. Different sources of fuel used for cooking have been discussed like Electricity, Gas / Kerosene Oil, Wood / Charcoal and Others (Dung Cake and Crop Residue are reported in the others category). 48 percent of the household in 2019-20 as compared to 41percent in 2014-15 are using Gas as main fuel used for cooking. This percentage is higher in urban area, 88percent as compared to 23 percent in rural area.

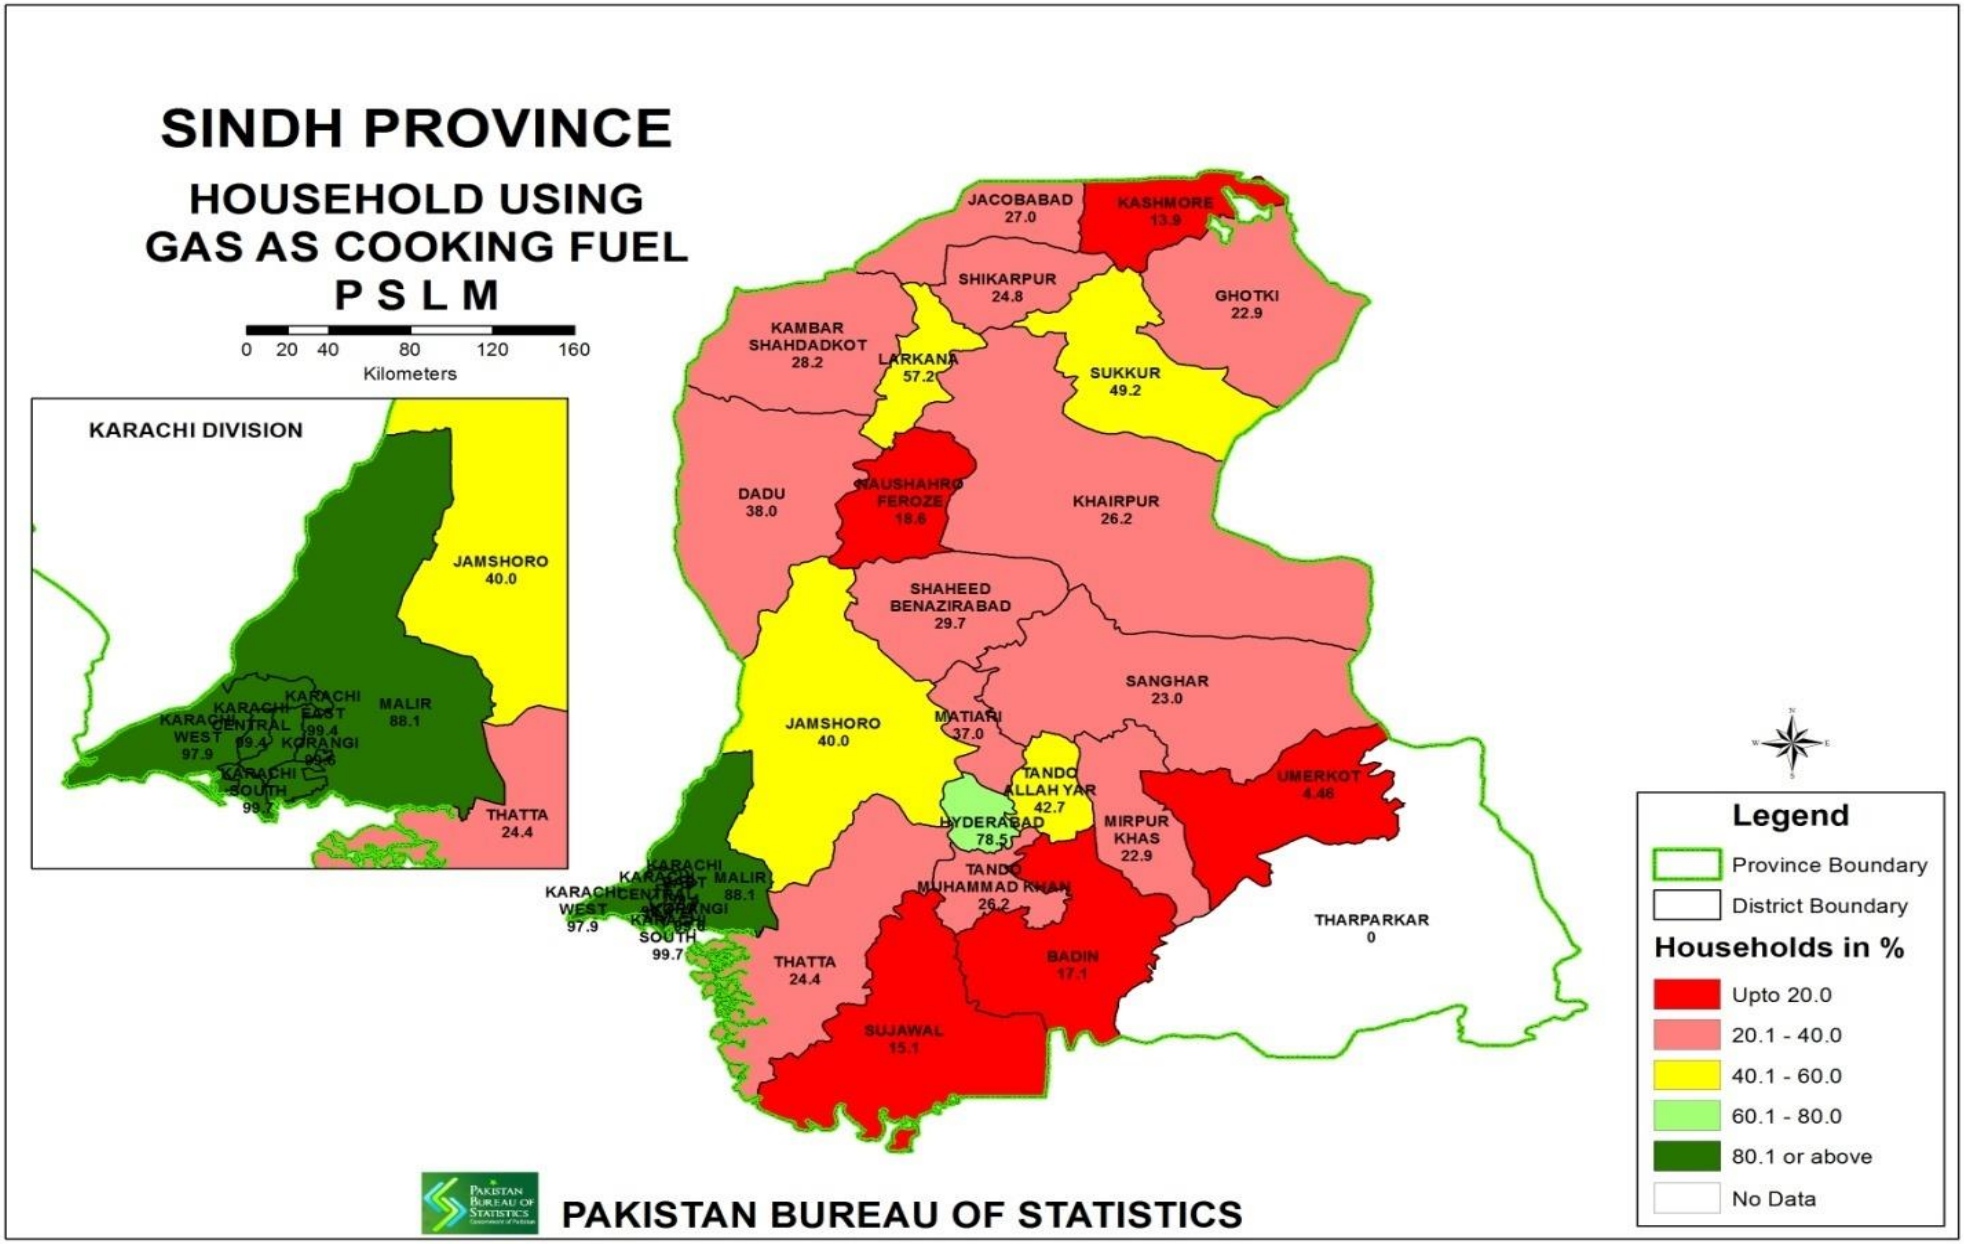

Provincial level comparison shows that use of Gas as a main source of cooking is highest in Sindh i.e. 57 percent, and lowest in Khyber Pakhtunkhwa Excluding Merged areas and Khyber Pakhtunkhwa Including Merged areas with 34 percent and 30 percent respectively in 2019-20. (Figure 15)

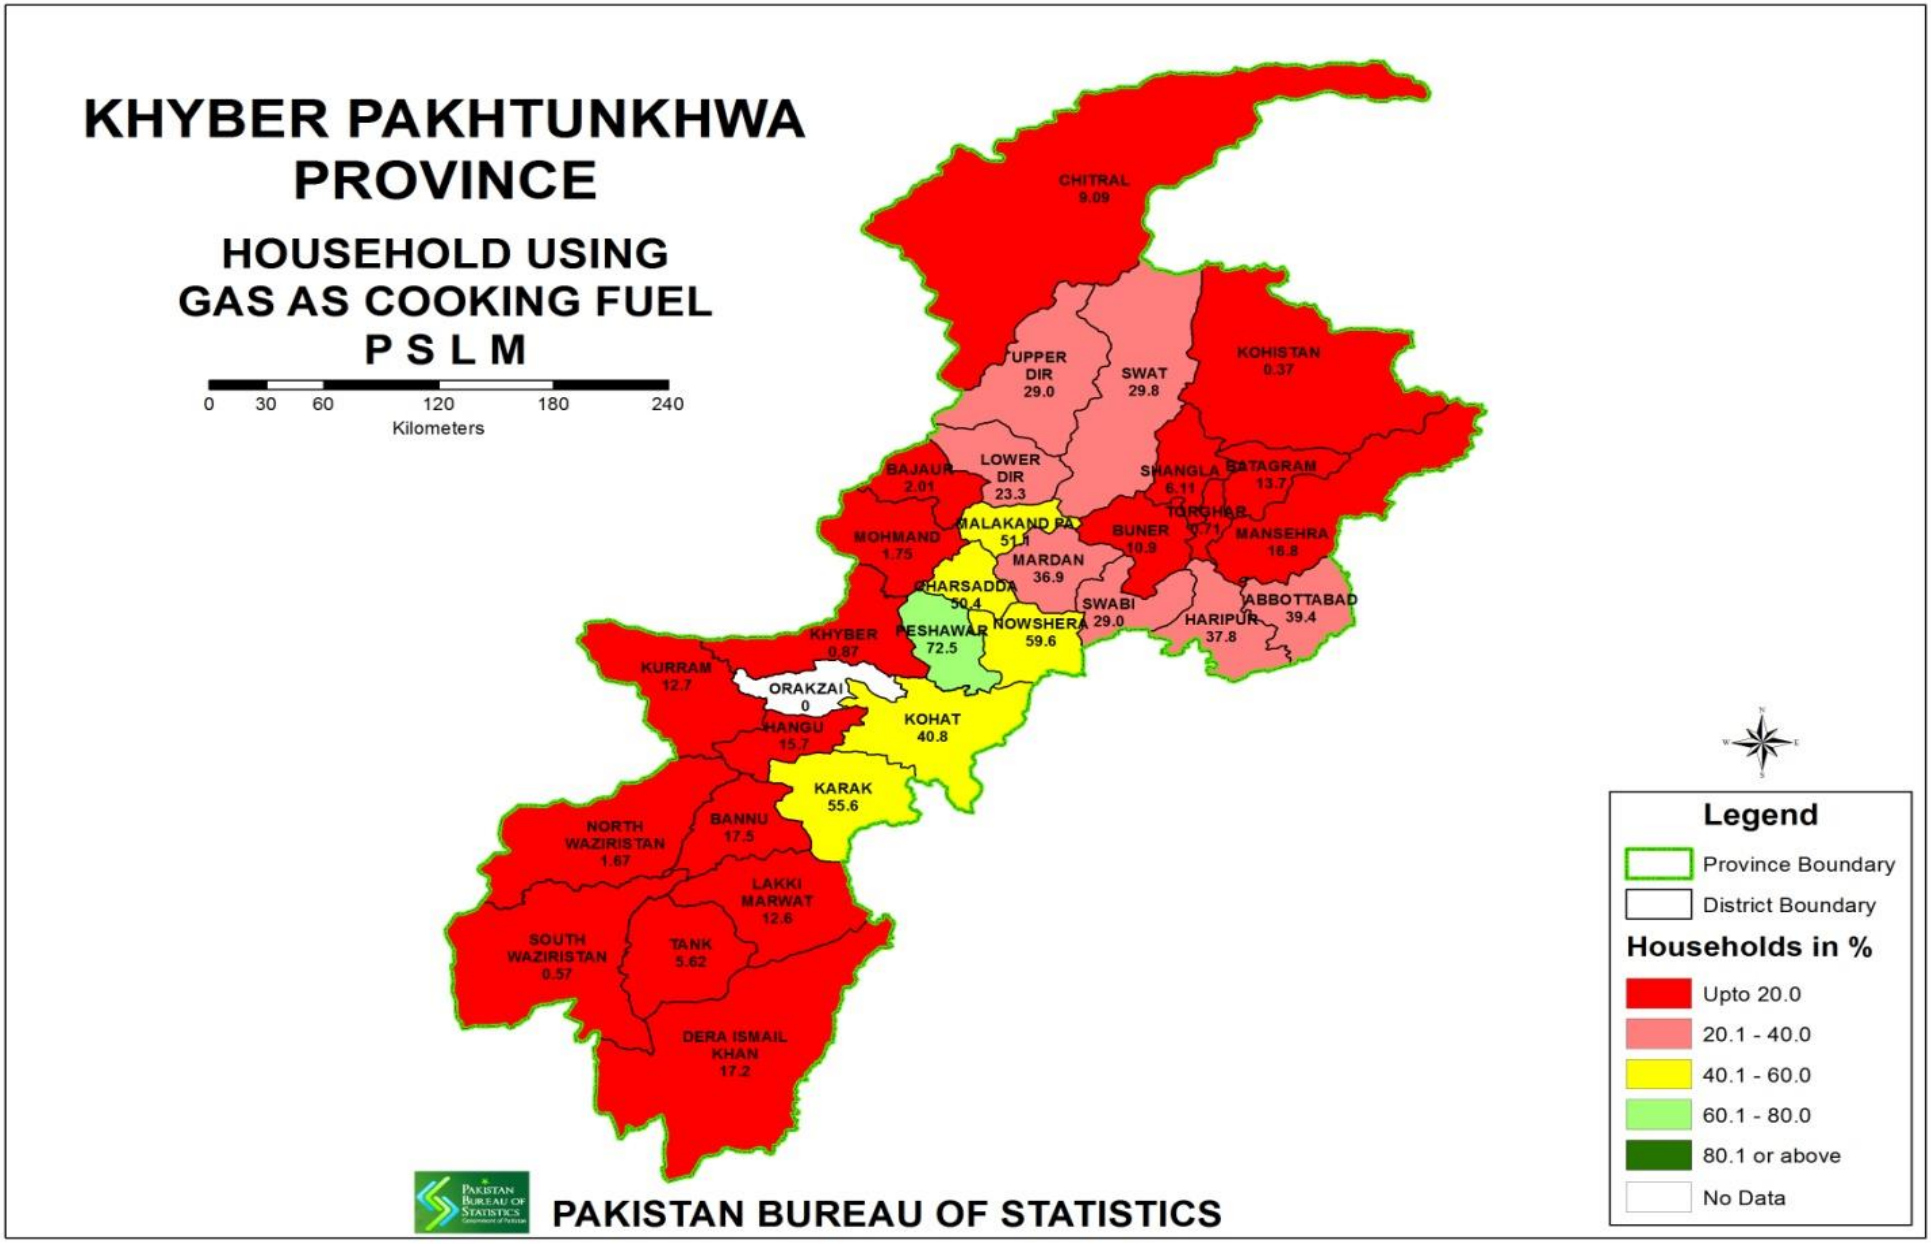

Figure 15: Percentage of household with Gas as fuel for cooking.

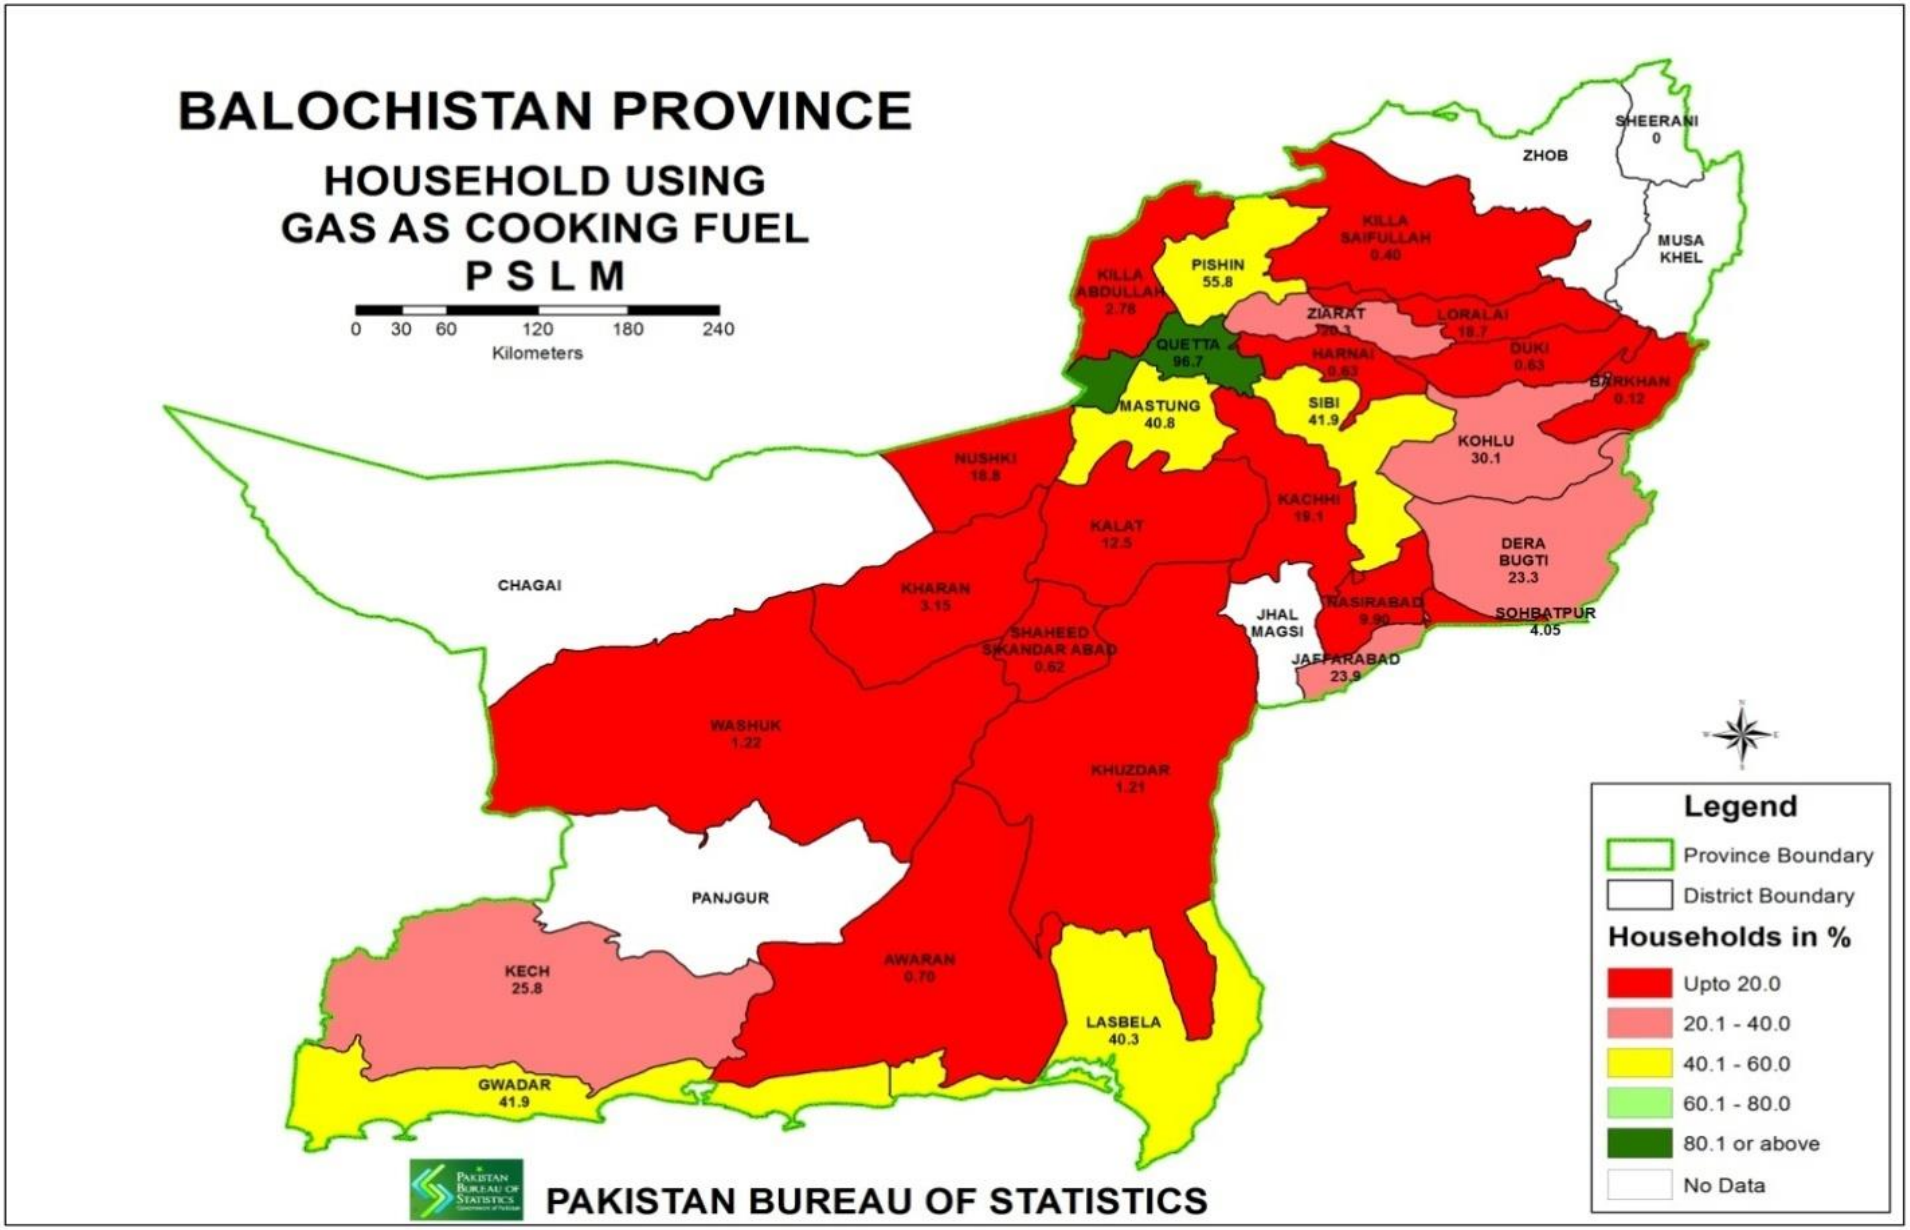

In Islamabad 93 percent of household are using gas as a fuel for cooking, whereas comparing district Lahore with 95 percent, Karachi south 100 percent, Peshawar 73 percent and Quetta with 97 percent are the top ranked district with in their respective provinces. Whereas district Rajanpur 4 percent, Tharpakar 0 percent, Orkazai 0 percent and Sheerani with 0 percent are the bottom district within their respective province.

7.7.4 Clean Fuel Used for Lighting, Cooking and Heating: Clean fuels are defined as Technologies/Fuel used for Cooking, Heating and Lighting by a household that is not hazardous for health (SDG 7.1.2)[7]. As in developing countries household typically rely on solid fuels such as Wood, Charcoal, Biomass or Kerosene Oil with inefficient technologies e.g. open fires, stoves, space heaters or lamps for Cooking, Lighting and Heating. It is well known that reliance on such inefficient energy for Cooking, Heating and Lighting is associated with high levels of household (indoor) air pollution. The use of inefficient fuels for cooking alone is estimated to cause over 4 million deaths annually, mainly among women and children. This is more than TB, HIV and malaria combined presents information regarding use of clean fuel for Cooking, Heating and Lighting (Metadata SDG 7.1.2). In Pakistan 37 percent household have access to Clean Fuel technology Including Gas, LPG/Cylinder and Electricity for Cooking, Solar Energy, Electricity, LPG, Gas for Heating and Electricity, Solar Energy, and Gas for fuel used for Lighting. Significant regional gap has been observed while comparing results of urban and rural areas with 73 percent and 15 percent respectively. Percentage is higher in Sindh with 49 percent and Lowest in Khyber Pakhtunkhwa Excluding Merged Areas and Including Merged Areas with 18 Percent and 16 percent respectively as in Khyber Pakhtunkhwa peoples rely on wood/Sticks for cooking purposes. In Islamabad 82 percent household have access to clean fuel for cooking, heating and lighting. While comparing district it is observe that district Lahore with 85 percent, Karachi Central 97 percent, Kark 53 percent and Quetta 95 percent are the top ranked district with access to Clean Fuel .Whereas district Rajanpur 1 percent, Tharparkar 0 percent, Orkazai 0 percent and Washuk with 0 percent are the district with less Access to Clean Fuel for cooking, heating and lighting.

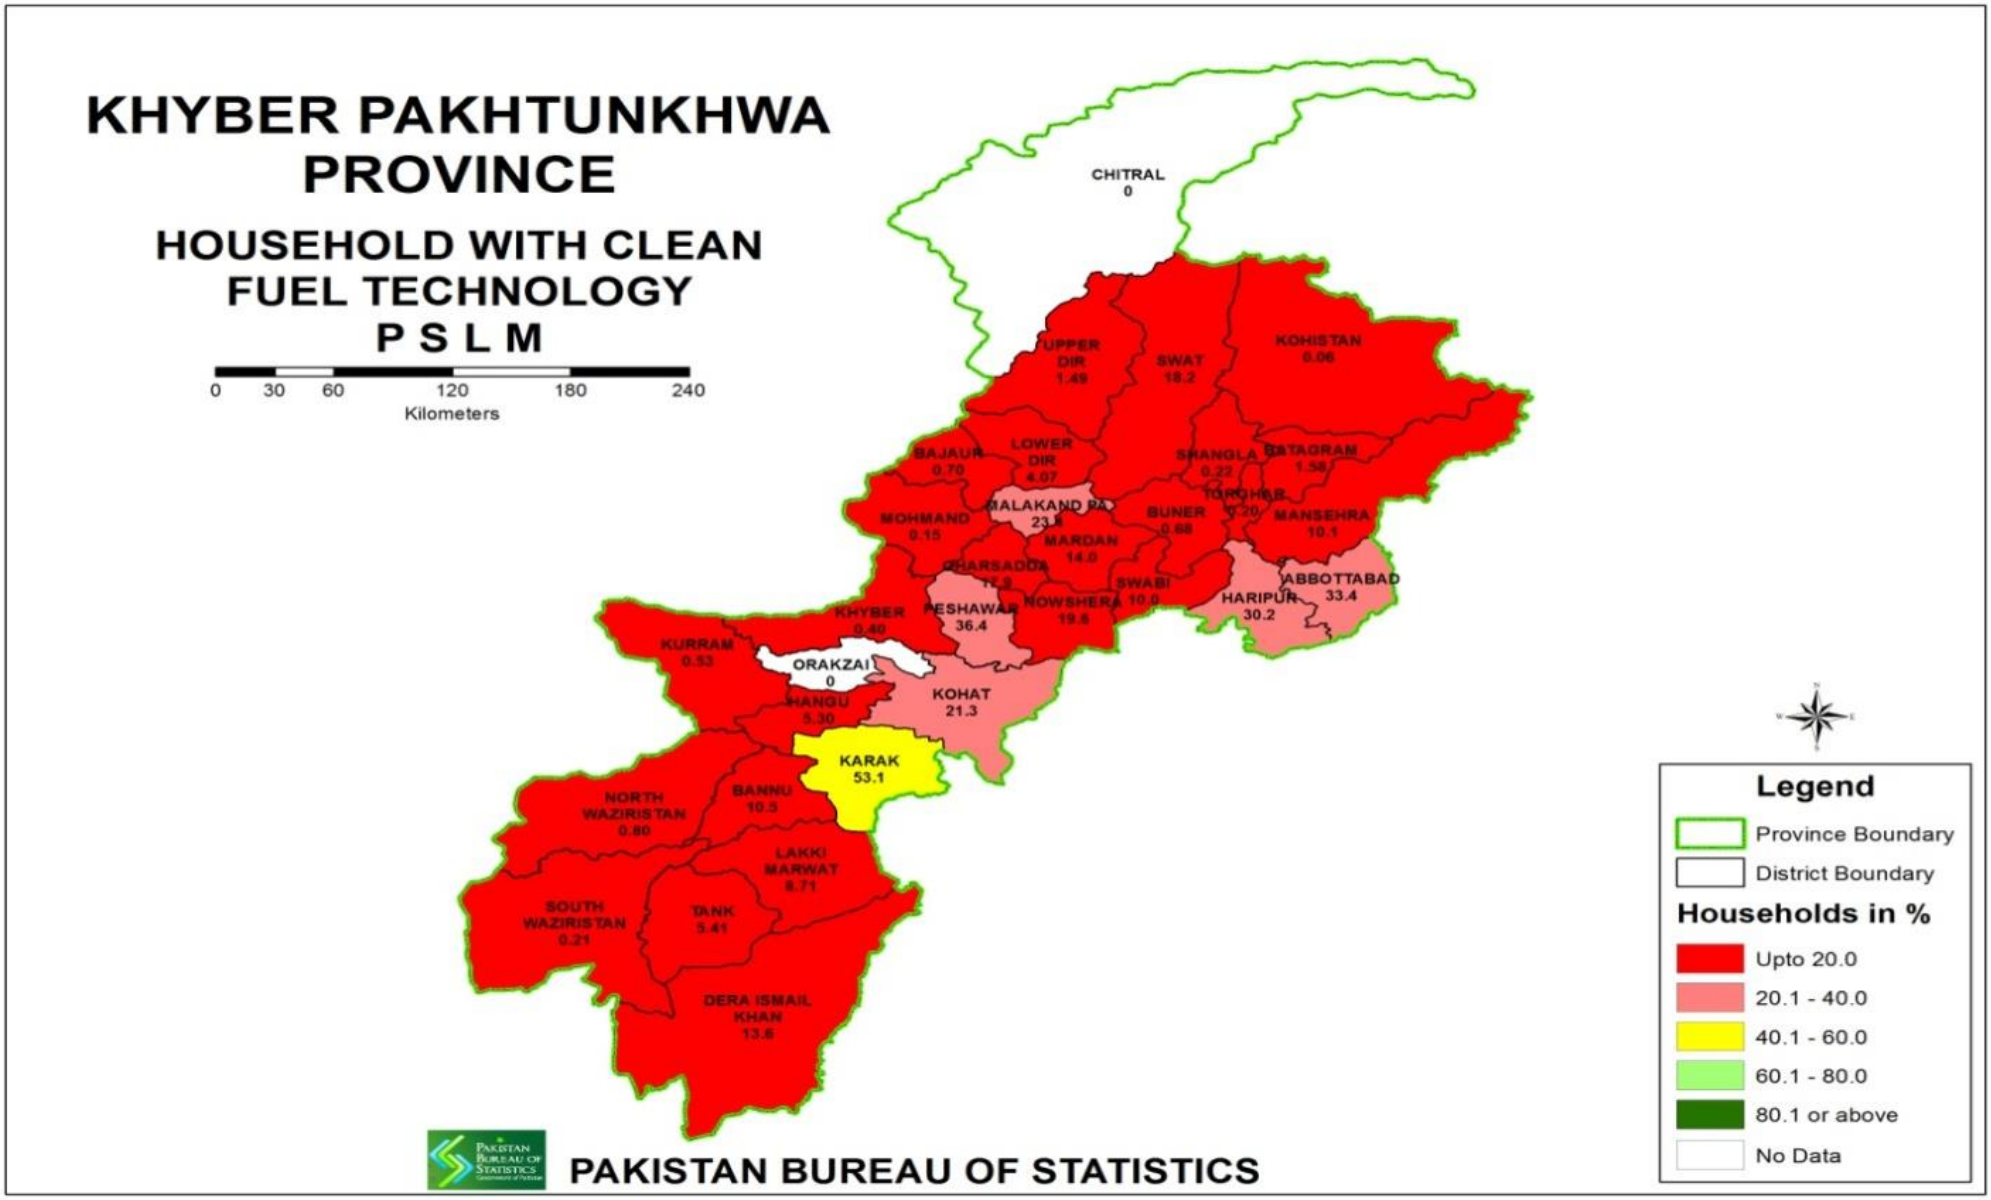

Figure 16:Percentage household of Clean Fuel for cooking,heating,lighting.

8. Household Perception of Economic Situation and Satisfaction by Facilities and Service Use

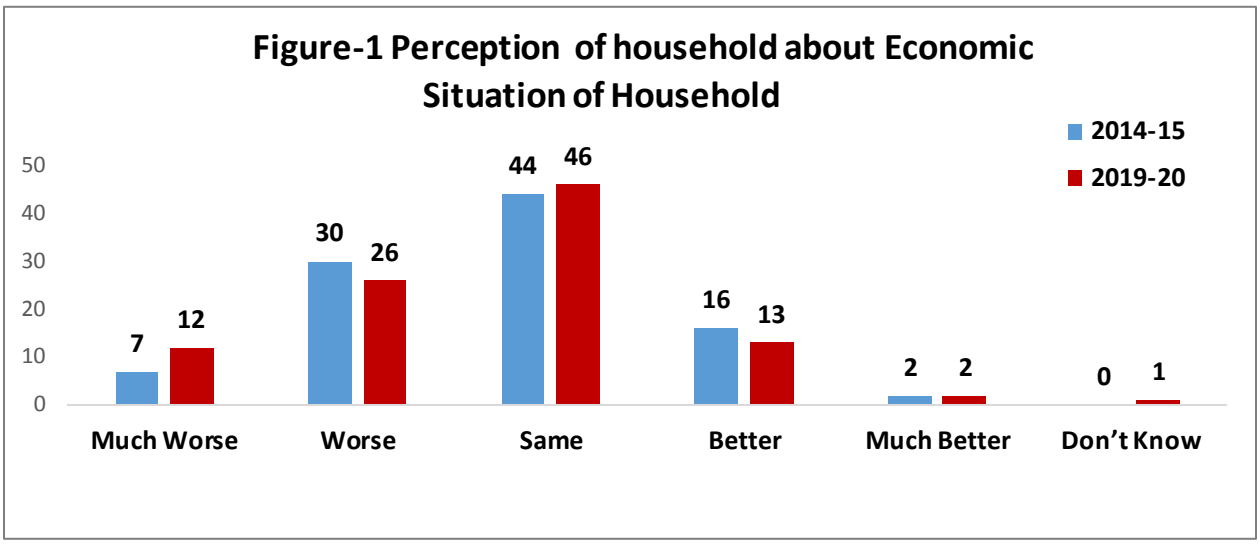

8.1 Introduction

This chapter is focused on the Perception of household about economic situation of their own households and community. Aim of the present government is to improve the economic situation of people and government is investing considerable amount for providing Basic Services. According to United Nations High Commissioner for Human Rights, "States are responsible for delivering a variety of services to their populations, including education, health and social welfare services. The provision of these services is essential to the protection of human rights such as the right to housing, health, education etc.

In PSLM 2019-20 information regarding Perception of Economic Situation and Satisfaction from the services, a household used in last 12 years has been collected at District Level for evidence based policy making and fund allocation . This will help the government to identify priority sectors in particular district to properly address the problems.

8.2 Perception of Household about the Economic Situation

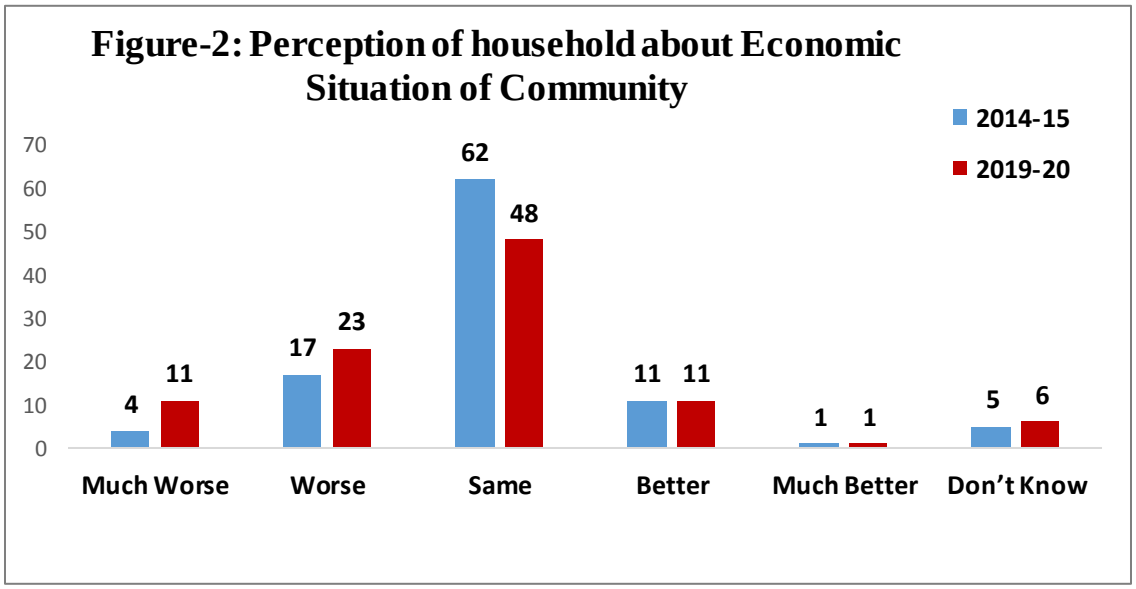

Households were asked to compare their economic situation with last year. Forty six percent household in 2019-20 reported no change as compared to 44 percent in 2014-15. Twenty Six percent household reported worse and 12 percent reported much Worse situation of household in 2019-20, as compared to 30 percent and 7 percent in 2014-15 respectively. While 13 percent household reported better and 2 percent much better situation of household in 2019-20 as compared to 16 percent and 2 percent in 2014-15. (Figure 1)

Provincial level comparison shows that Punjab with 25 percent worse and 12 percent Much Worse situation of household in 2019-20 as compare to 30 percent and 7 percent respectively in 2014-15 reported less proportion with worse or much worse situation of household. While Balochistan with 22 Percent worse and 20 percent much worse situation of household in 2019-20 as compare to 23 percent and 11 percent respectively in 2014-15 reported highest percentage among all provinces. In Islamabad 17 percent households reported worse and 14 percent reported much worse household economic situation as compared to 21 percent and 3 percent household respectively in 2014-15. District level situation showed that, Toba Tek Singh with 39 percent worse and 18 Much worse situation, Jamshoro with 40 percent Worse and 44 percent Much Worse situation of household , Bajur with 43 percent Worse 27 percent Much worse condition and Nasirabad with 21 percent Worse and 65 percent Much Worse condition of household showed highest proportion of household reported worse or much worse economic situation of household within their respective province. (Table 8.1)

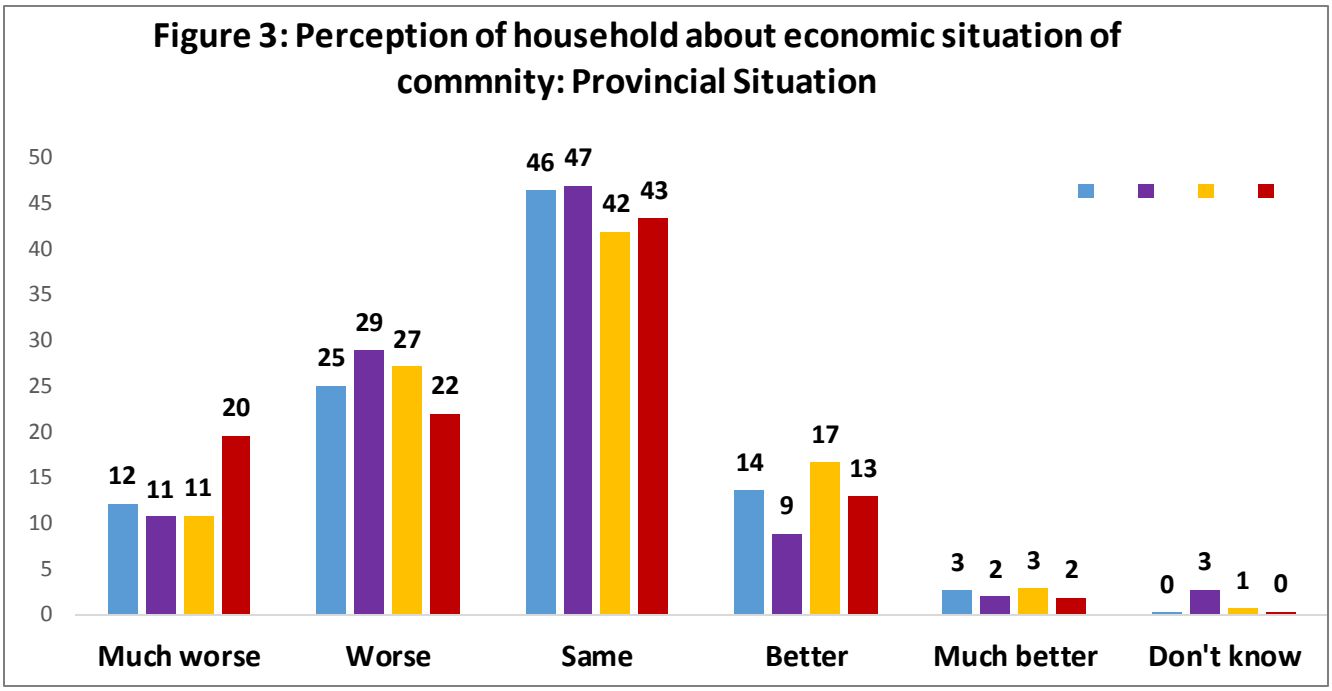

8.3 Perception of Situation of the household about Economic Situation of Community

Household were also asked about the economic situation of the community where they live, 23 percent of households reported worse and 11 percent reported much worse situation of community in 2019-20 as compare to 17 percent and 4 percent respectively in 2014-15, while 48 percent reported no change in 2019-20, as compared to 62 percent in 2014-15 . Eleven percent household reported better and 1 percent reported much better situation of community in 2019-20 as compare to 11 percent and 1 percent respectively in 2014-15. Provincial level situation showed that Punjab with 23 percent household reported worse and 10 percent reported Much Worse situation of community in 2019-20 as compared to 14 percent and 3 percent respectively in 2014-15 reported less proportion of worse or much worse situation of community among other province while Balochistan with 21 percent worse and 17 percent Much Worse situation of community in 2019-20 as compare 16 percent and 10 percent respectively in 2014-15 reported

highest percentage regarding worst Situation of community among all the four Provinces. In Islamabad 11 percent household reported Worse and 8 percent household reported much worse situation of community as compare to 16 percent and 3 percent respectively in 2014-15. (Figure 2,Figure 3,Table 8.2)

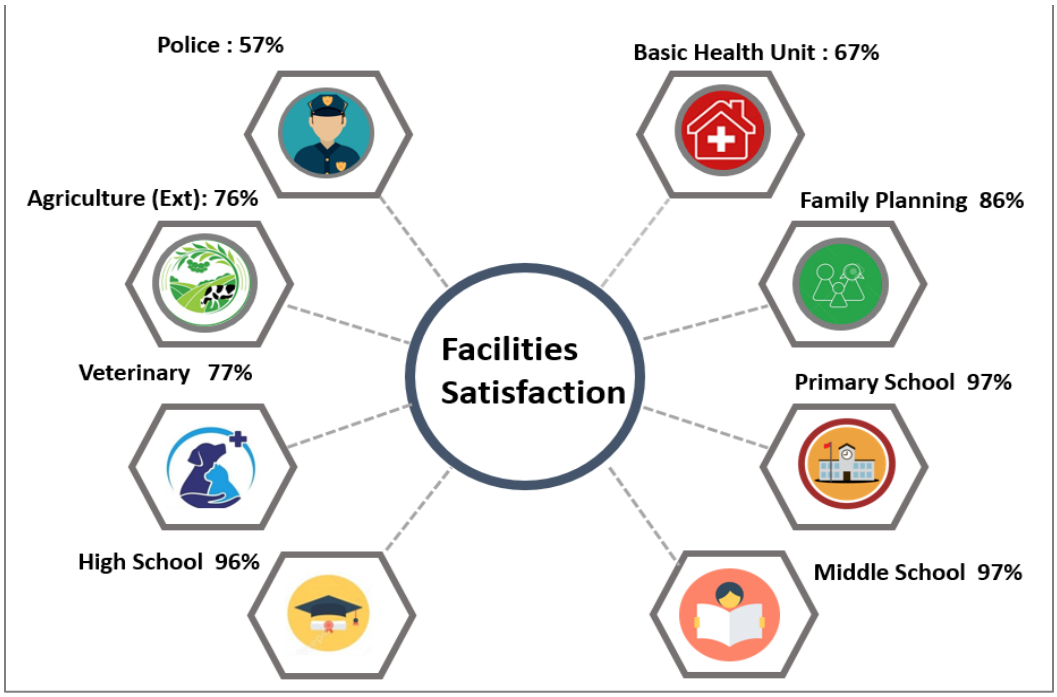

District level comparison show that Layyah with 76 percent worse 7 percent Much Worse situation of Community, Jamshoro 24 percent Worse 55 percent Much Worse , Shangla 35 percent Worse 55 percent Much Worse and Nasirabad with 19 percent Worse and 54 percent Much worse showed highest proportion of household who have replied that economic situation of community is worse or much worse within their respective province. (Table 8.2)

3.4 Satisfaction of the household with the Service Used

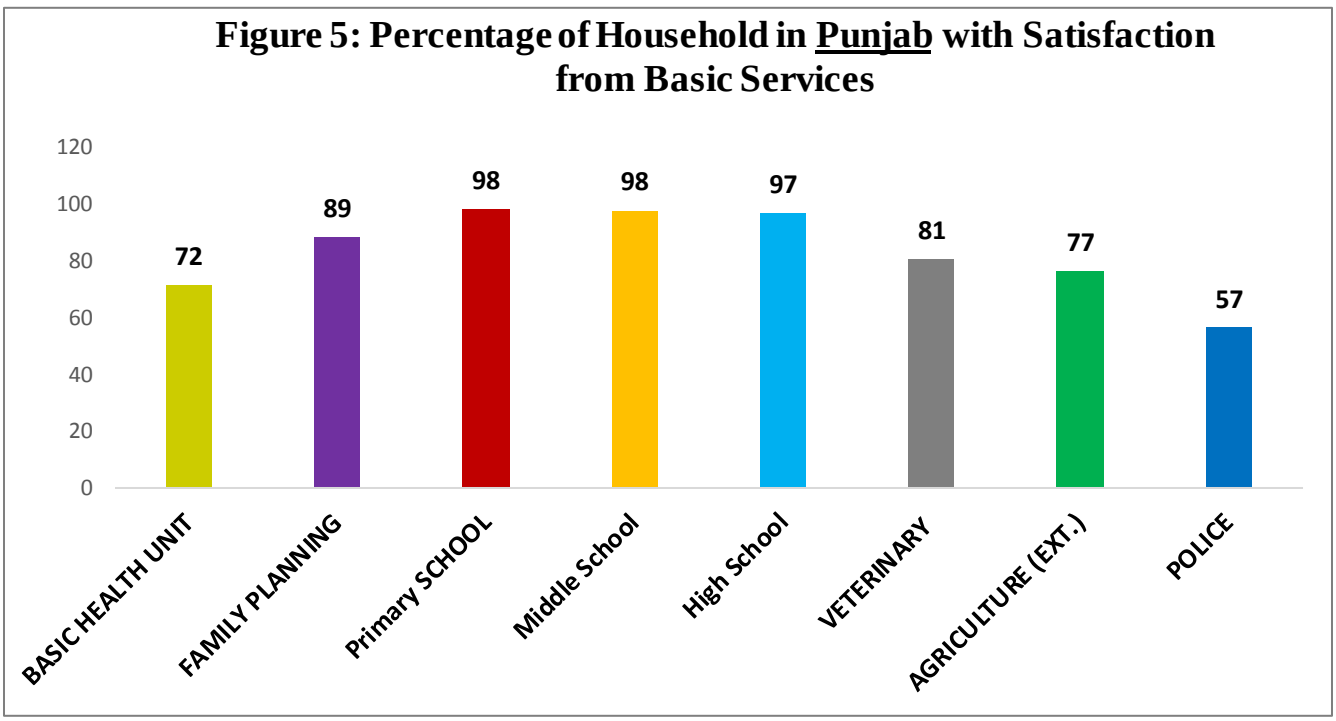

Households were also asked to give opinion about their satisfaction with the use of Facilities/ Services (Table 5.3); the denominator includes only those household who are using the facility. It is observed that overall satisfaction of the services used has increased for all facilities, 67 percent of the household were satisfied from Government Basic health facility in 2019-20 as compared to 57 percent in 2014-15.Eighty Six percent of the household were satisfied with the Family Planning Service in 2019-20, as compared to 83 percent in 2014-15, whereas 97 percent household were satisfied with Primary Schools as compared to 94 percent in 2014-15.Satisfaction from Veterinary Services were 77 percent as compared to 71 percent in 2014-15, Seventy Six percent of household showed satisfaction after using Agriculture Extension as compared to 69 percent in 2014-15 regarding Satisfaction with Police service it has increased to 57 percent as compare to 48 percent in 2014-15.(Figure 4,Table 8.3)

Figure 4: Percentage of Household with Satisfaction from Basic Service

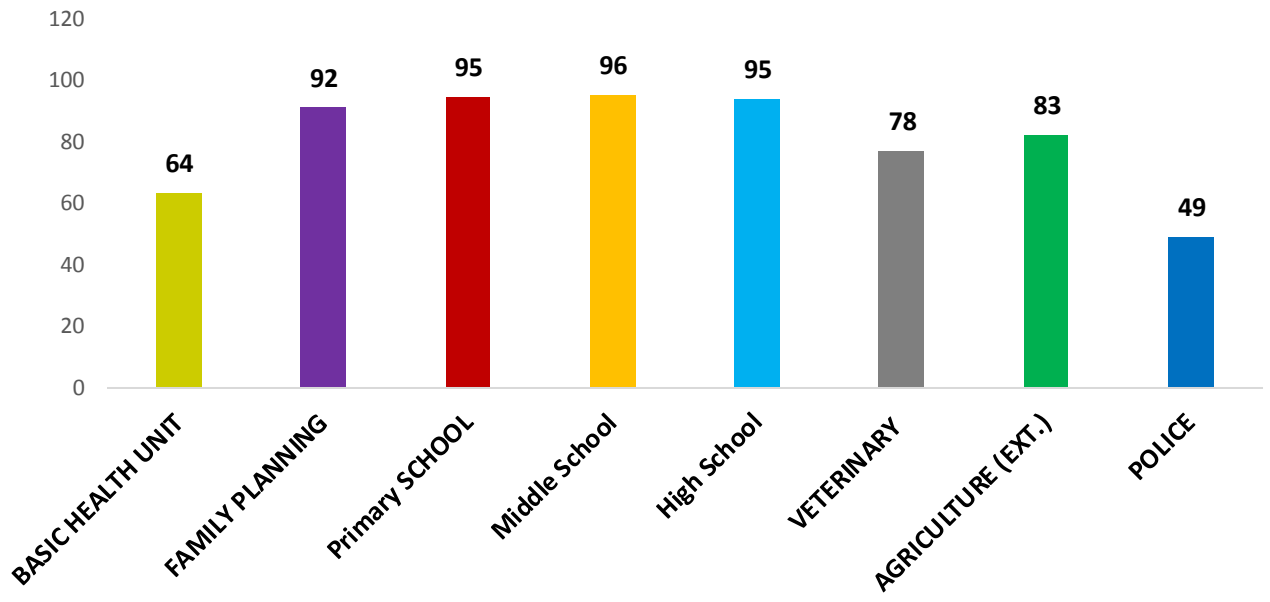

It is observed that in **Punjab** satisfaction with facilities has increased in almost all services, but there is decline in agriculture extension from 80 percent to 77 percent in 2019-20. Increase in satisfaction from BHU has been observed 72 percent as compared to 66 percent in 2014-15. Satisfaction from Family planning services with 89 percent, Schools with 98 percent, veterinary with 81 percent, Police with 57 percent have increased while as compared to Family planning with 86 percent, Schools with 96 percent, veterinary with 81 percent, Police with 50 percent in 2014-15. (Figure5, Table 8.3)

Figure 5: Percentage of Household in Punjab with Satisfaction from Basic Services

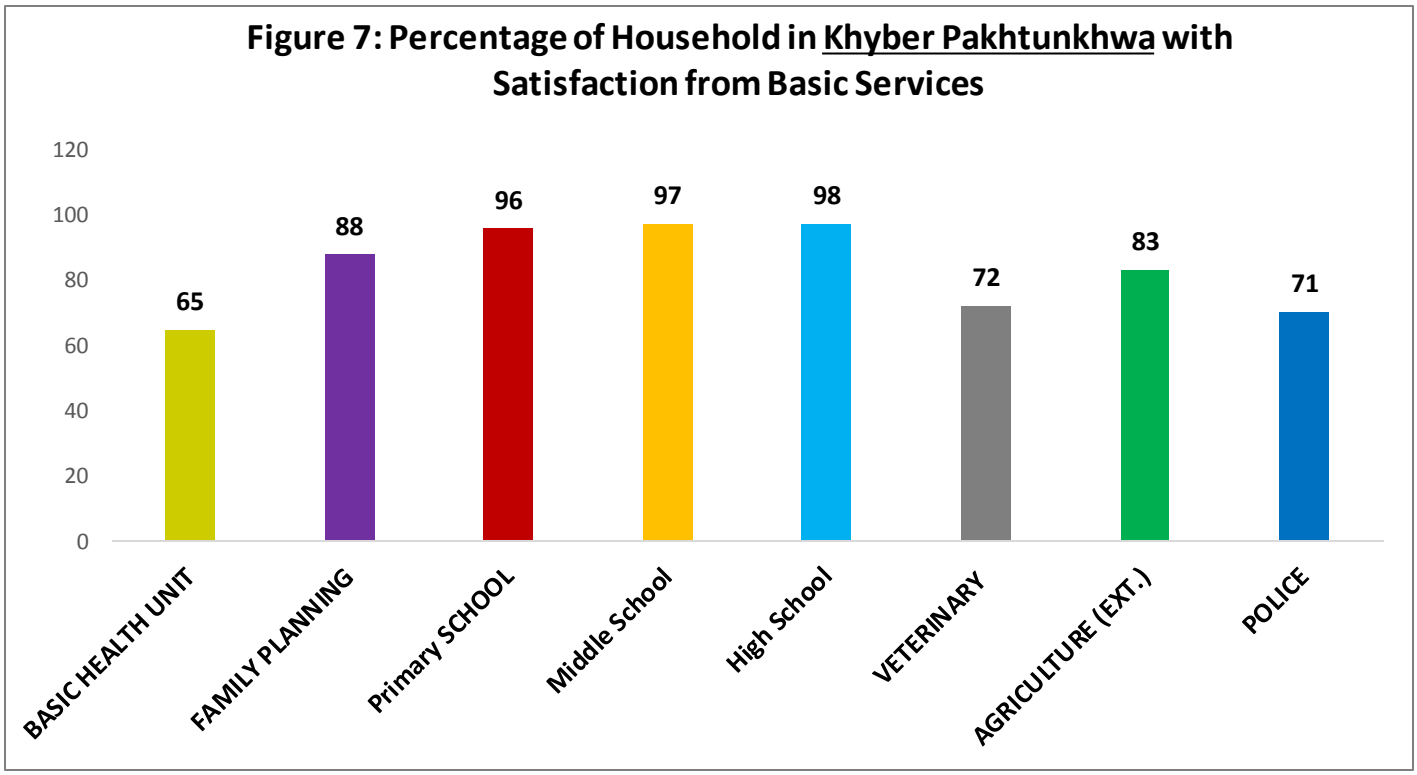

In **Sindh** Satisfaction from services of Basic Health Unit, Family Planning, Schools, Agriculture, Veterinary& Police increased. Satisfaction from services of Basic Health Unit increased to 64 percent from 51 percent in 2014-15, satisfaction from Family Planning service is 92 percent, Schools 95 percent, Agriculture Extension 83 percent, Veterinary with 78 & Police with 49 percent in 2019-20, while comparing with the situation in 2014-15 , Family Planning with 81 percent, Schools with 90 percent, Agriculture with 58 percent, satisfaction of services of Veterinary with 58 percent and Police with 35 percent .(Figure 6,Table 8.3)

Figure 6: Percentage of Household in Sindh with Satisfaction from Basic Services

In **Khyber Pakhtunkhwa** increase in satisfaction from all services has been observed as compared to 2014-15. The situation showed that satisfaction from BHU is 65 in 2019-20 has increased to50 percent in 2014-15, family planning to 88 percent, Primary Schools to 97 percent, Veterinary to 72 percent, Agriculture extension to 83 percent & police to 71 in 2019-20, while comparing with situation in 2014-15, Family Planning 82 percent, School 93 percent, veterinary 58 percent, Agriculture 57 percent and Police with 66 percent. (Figure 7, Table 8.3)

The situation of **Balochistan** need immediate attention as only increase in satisfaction from services like School and police has been observed. While satisfaction from services of BHU, Family Planning, Veterinary services and Agriculture Extension decreased as compared to the situation in 2014-15.Increase in satisfaction from services like School with 84 percent and police with 56 percent observed in 2019-20,while comparing with the situation in 2014-15 Schools with 82 percent and police with 50 percent. Satisfaction from BHU decreased to 40 percent, Family Planning to 50 percent, Veterinary to 41 percent and Agriculture with 42 percent in 2019-20, while comparing with the situation in 2014-15 BHU 43 percent, Family Planning 62 percent, Veterinary 47 percent and Agriculture Extension with 55 percent. (Figure 8, Table 8.3)

9. FOOD INSECURITY EXPERIENCE SCALE

Nation-wide Food Insecurity is the deficiency of sustenance that contains the proper nutrients needed to feed a population. Lack of nutritious food, serves to create inhabitants with weak immune systems, high malnutrition rates and consists of children suffering from impaired growth. A household within a quintile, that experiences moderate levels of food insecurity, is forced to compromise on low quality food and additionally be required to reduce their quantity consumed during the year. On the other hand, the more extreme case is of those experiencing severe levels of food insecurity that do not have access to daily meals let alone the proper nutrients within their meal.

The root cause of food insecurity in developing countries is hunger and poverty People experiences moderate levels of food insecurity would eat low quality food and might have been forced reduce quantity of food at times during the year, while those experiencing severe levels wouldn't have anything to eat for an entire day, Our questionnaire is designed to focus on the four pillars of food security i.e. availability of food, access of food, utilization of food and stability of food to the society. A series of questions are drafted that are targeted to get relevant information to cast out actionable results for government institutions and policy makers to tackle food security. The module and analysis procedures developed by Food and Agriculture Organization (FAO), aims to find responses to calculate SDG indicator 2.1.2: the prevalence of moderate or severe food insecurity in population/households. To measure the experiences of the household members: i.e.

- Were you or your family members worried about not having enough food to eat, due to poor financial conditions and other resources[1]?
- Were you or your family members wouldn't able to eat healthy and nutritious food, due to poor financial conditions and other resources?
- Were you or your family members worried about not to ate different kind of food, due to poor financial conditions and other resources?
- Were you or your family members skipped meal for a time, due to poor financial conditions and other resources?
- Were you or your family members ate less food, due to poor financial conditions and other resources?

[1] barter trade; small livestock; fishing, hunting or gathering; the transfer of food from; family, community members, government or other donors.

- There is nothing to eat at your home, due to poor financial conditions and other resources?
- Were you or your family members are hungry but did not eat food, due to poor financial conditions and other resources?
- Were you or your family members would not be able to eat food a whole day[2] due to lack of money or other resources?

Respondents were asked to report if each of the conditions has been experienced, at times, over the past 12 months, to cover possible seasonal changes in food security across provinces, their districts and national and regional level.

According to our data collected, Overall 83.56 percent of the household in Pakistan are food secure (not face any problem), 14.64 percent experiencing moderate food insecurity while 1.80 percent facing severe food insecurity 2019-20[3] as compare to 84.08 percent of household were food secure, 13.55 percent experiencing moderate food insecurity while 2.37 percent facing severe food insecurity in 2018-19.

[2] Source: FAO
[3] Data collection period for the survey 2019-20 is from August 2019 to March 2020.

Figure1: Moderate or Severe food insecurity 2018-19

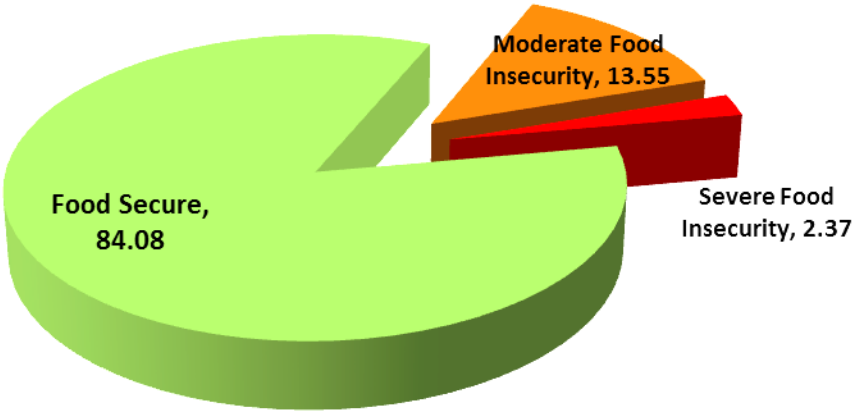

Figure1: Moderate or Severe food insecurity 2019-20

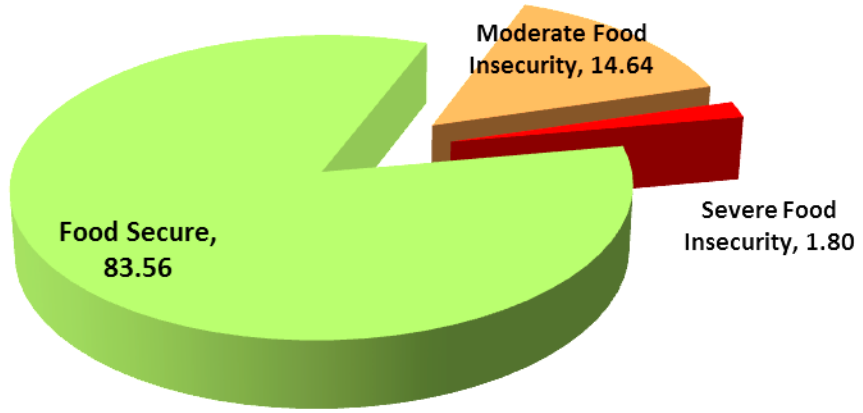

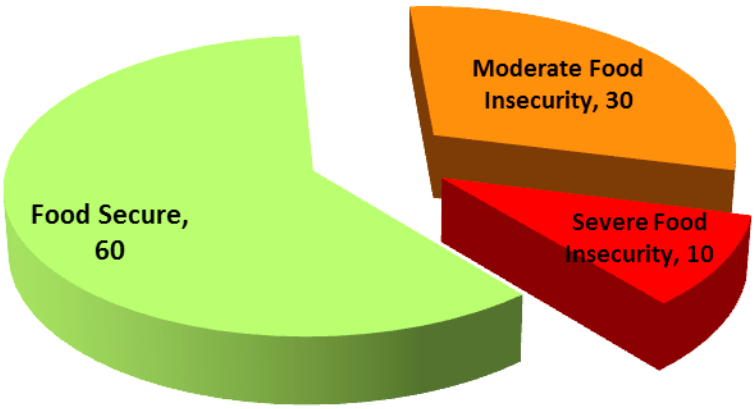

Figure1: Moderate or Severe food insecurity COVID-19

In the light of above scenario, comparability with COVID–19[4] survey explains that there is a sudden decline in the number of food secure households i.e. 60 percent, 30 percent were experiencing moderate food insecurity while 10 percent facing severe food insecurity in Pakistan. Elucidation of moderate or severe food insecurity by provinces their top and bottom districts with the help of table 9.1.

Situation Analysis 2019-20

Situation analysis is subjective approach used by PSLM Section of PBS to potray/depict the situation at district level within provinces by considering the **16 indicators** from dimensions of Education(5), Health(3), Living Stndards(5) and Information Communication and Technology (ICT)(3). This approach is used for first time, to analyze PSLM District Level Survey 2019-20 data. It identifies the districts which are performing well and also highlights the district which require government's interventions regarding development plans & resource allocation . It also provides comparison between districts by which one could easily identify the reason of non-development in a specific district and also helps policy makers to change the policies and activities in place to overcome the problem. Weights has been assigned subjectively to Dimensions with respect to their relative importance, which can be ameded / modified by users/policy makers according to their needs.The description of indicators and their relative weights are as below:

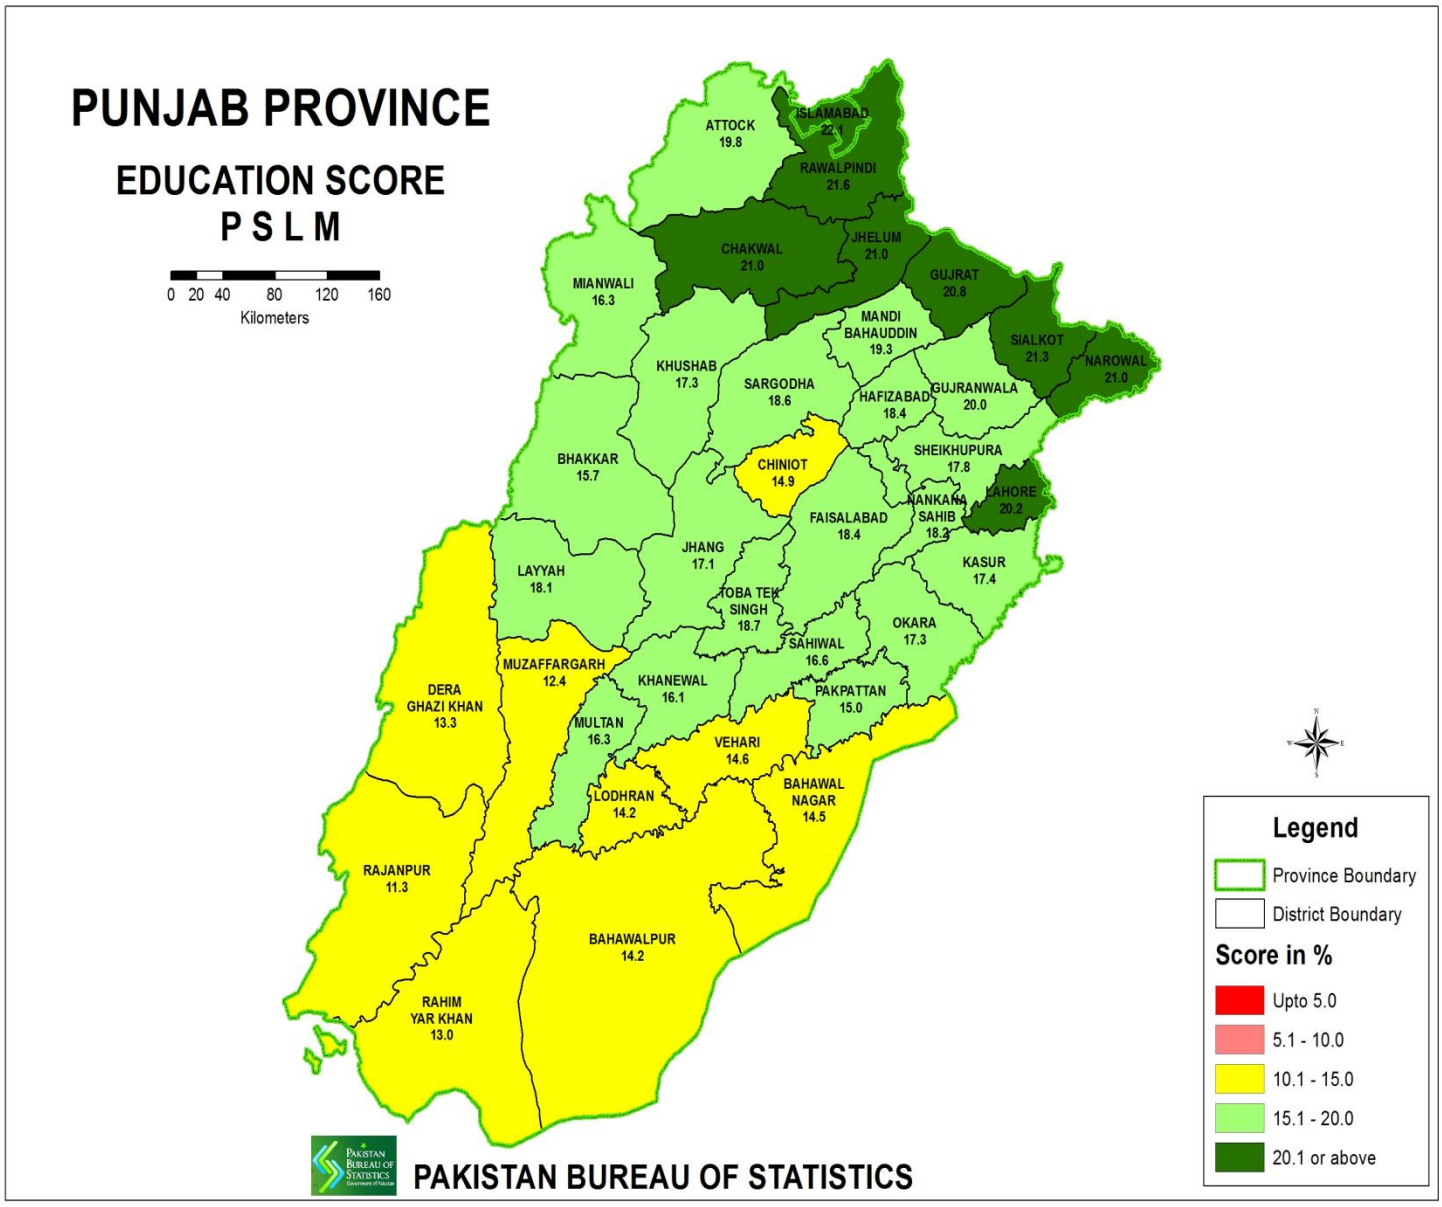

Dimensions	Indicators	Indicator Weights	Dimension Weight
Education	Literacy	0.15	30%
	Completed Primary or Higher	0.25	
	Youth Literacy 15-24 years	0.15	
	Attending School (5-16)	0.3	
	Gender Parity Index	0.15	
Health	Full Immunization Record Based	0.3	30%
	Pre Natal Consultation	0.3	
	Skill Birth Attendant	0.4	
Living Standards	Roof & Wall	0.1	30%
	Electricity as Source of Lighting	0.25	
	Gas as Fuel For Cooking	0.25	
	Improved Drinking Water Source	0.2	
	Improved Toilet Facility	0.2	
ICT	Computer/Laptop/Tablet	0.2	10%
	Mobile	0.4	
	Internet	0.4	
Overall			**100**

Education Score 2019-20

Education score has been computed by combining five indicators:

- Literacy,
- Completed Primary or higher age (10 years & above),
- Youth Literacy Age (15-24 yrs),
- Attending School
- Gender Parity Index

Weights has been assigned accordingly in order to capture the true situation of districts in education .By combining these five indicators education score has been calculated. Situation of districts with respect to education is depicted in the maps below.

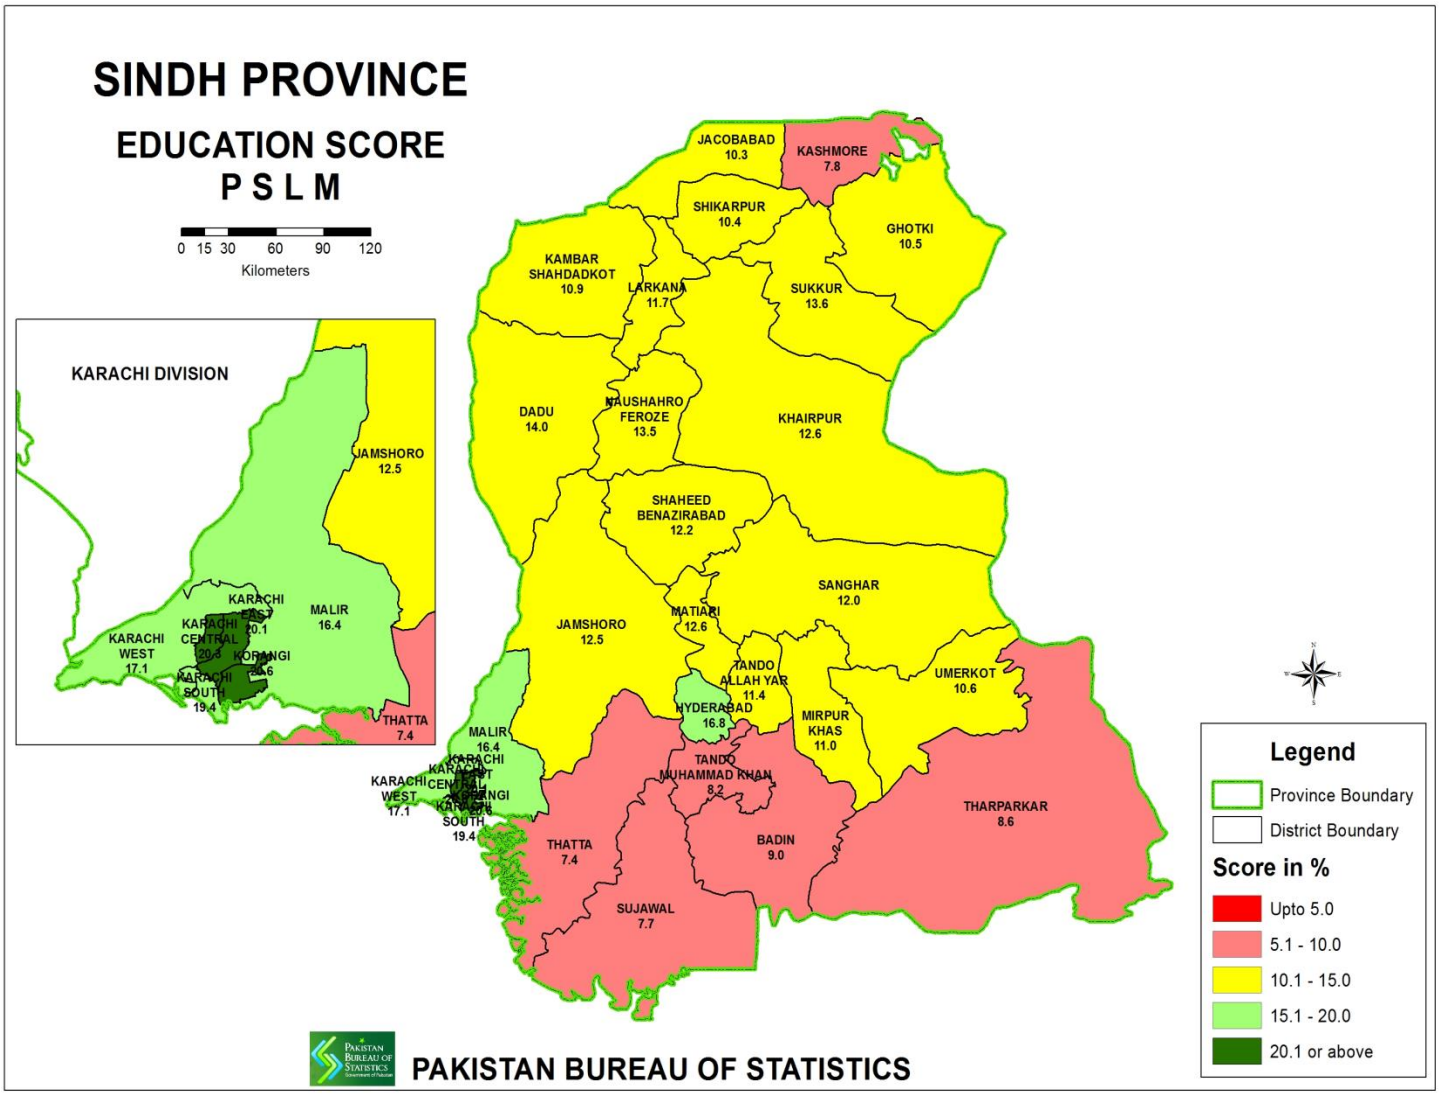

Education Score 2019-20

This situation Analysis depicts that situation within Punjab are better than other three provinces, however there are stark difference between districts of central, northern and southern Punjab in Education. Avergare score of Districts of Punjab is 17.26 out of 30 and 19 distrcts fall below average and 17 above avargae out of 36 districts which clearly indicates the districts needed interventions.

Punjab	
Average	17.26
Total Districts	**36**
Above Average	17
Below Average	19

Score	Grade	Colour	Districts
20.1 or Above	A		7
15.1-20.0	B		20
10.1-15.0	C		9
5.1-10.0	D		Nil
upto 5	E		Nil
Total Districts			36

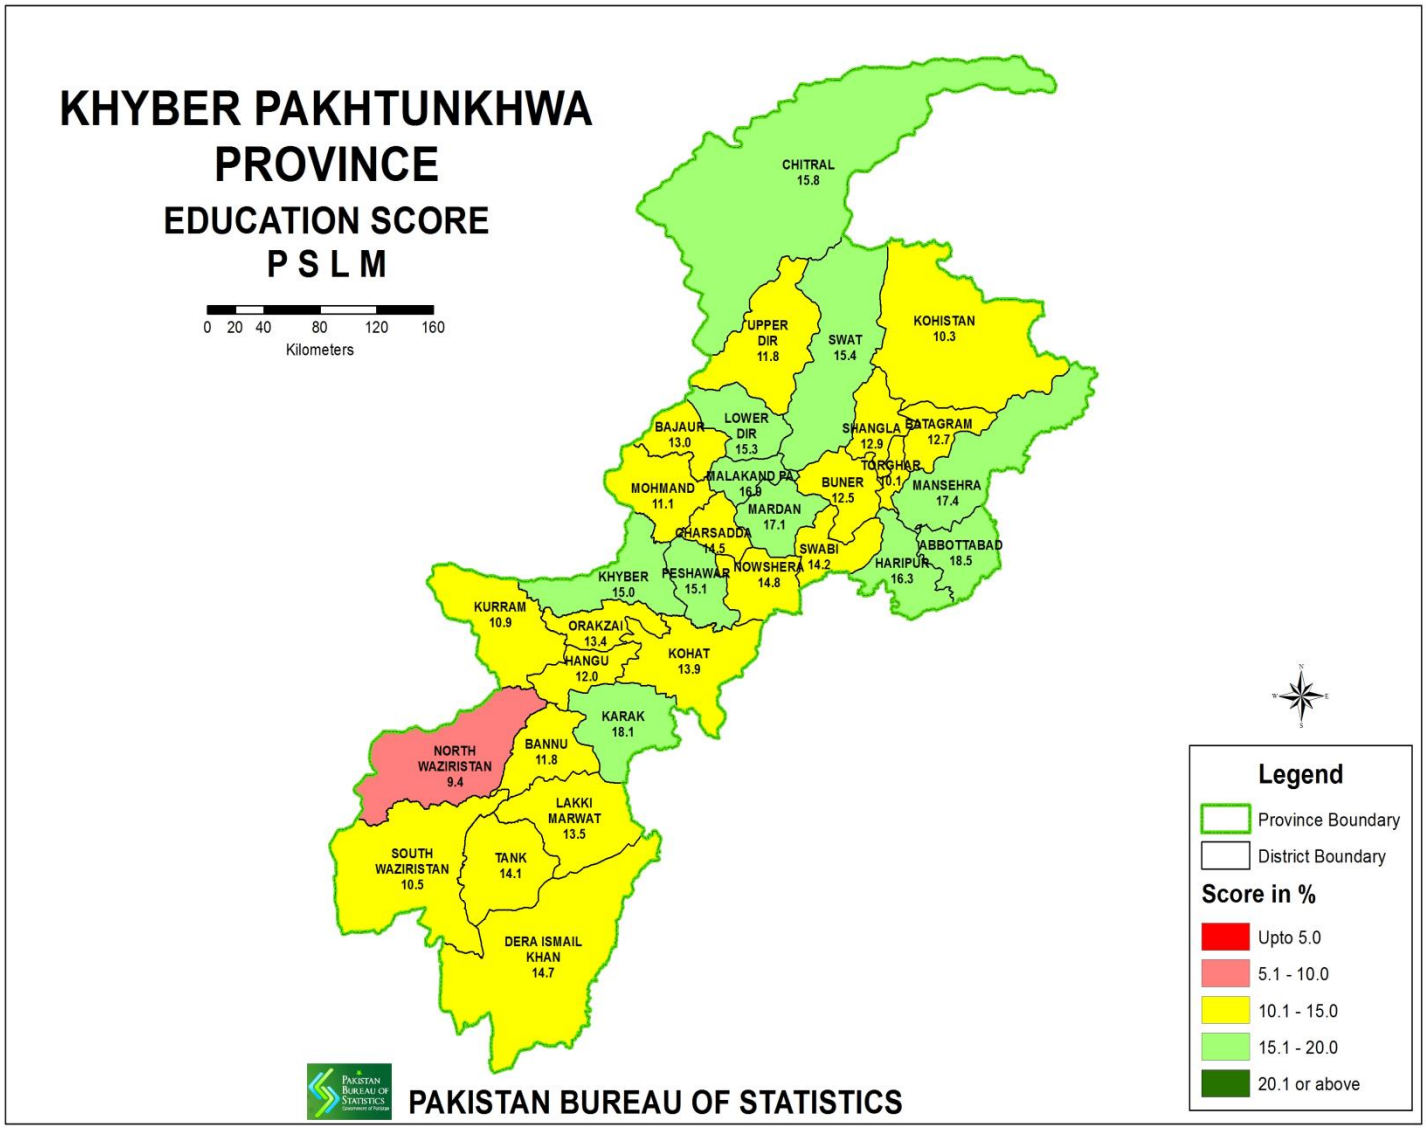

Education Score 2019-20

Situation analysis of Education within Sindh province depicts alarming picture. Overall only 10 districts out of 29 districts are above average i.e 12.85 however, 19 districts are below average.There is dıɛ need of improvement in Sindh as its condition is quite vulnerable. Government must put serious efforts to improve the situation of Education for improving Human Development Indicators.

Sindh	
Average	12.85
Total Districts	29
Above Average	10
Below Average	19

Score	Grade	Colour	Districts
20.1 or Above	A		3
15.1-20.0	B		4
